

# Dumps GICSP Free Download & GICSP Reliable Dumps Ppt

We continually improve the versions of our GICSP study materials so as to make them suit all learners with different learning levels and conditions. The clients can use the APP/Online test engine of our GICSP study materials in any electronic equipment such as the cellphones, laptops and tablet computers. Our after-sale service is very considerate and the clients can consult our online customer service about the price and functions of our GICSP Study Materials and refund issues on the whole day and year.

You do not worry about that you get false information of GICSP guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. The 3 formats of GICSP study materials are PDF, Software/PC, and APP/Online. Each format has distinct strength and shortcomings. We have printable PDF format prepared by experts that you can study our GICSP training engine anywhere and anytime as long as you have access to download. We also have installable software application which is equipped with GICSP simulated real exam environment.

## **GICSP Reliable Dumps Ppt | Practice GICSP Exam Pdf**

Passing the GICSP certification can prove that and help you realize your goal and if you buy our GICSP quiz prep you will pass the exam successfully. Our product is compiled by experts and approved by professionals with years of experiences. You can download and try out our laTest GICSP Quiz torrent freely before your purchase. Our purchase procedures are safe and our products are surely safe without any virus. After you purchase our GICSP exam guide is you can download the test bank you have bought immediately.

## **GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q33-Q38):**

**NEW QUESTION # 33**

What can be configured on the router so that it can most effectively implement and enforce zones for the shown subnets?

- A. Secure Shell
- B. MAC-based port security
- **C. Access control lists**
- D. 802. 1x protocol

**Answer: C**

Explanation:

The diagram shows multiple subnets/zones (Levels 0-3) connected via routers and switches. To enforce traffic flow policies between these zones/subnets, the router should implement Access Control Lists (ACLs) (B).

ACLs can:

Filter traffic between subnets based on IP addresses, ports, and protocols. Enforce security boundaries as per ICS segmentation principles (A) MAC-based port security controls device-level access but is less effective for inter-subnet traffic control.

(C) Secure Shell (SSH) is for secure device management, not traffic control.

(D) 802.1x provides port-based network access control but is less relevant for routing traffic between subnets.

GICSP highlights ACLs as fundamental tools for network segmentation enforcement in ICS.

#### NEW QUESTION # 34

Which resource includes a standardized categorization of common software vulnerabilities?

- A. CSC
- B. CIP
- C. CVSS
- **D. CWE**

**Answer: D**

Explanation:

The Common Weakness Enumeration (CWE) (A) is a comprehensive list and taxonomy of common software weaknesses and vulnerabilities. It provides standardized names and definitions that help organizations identify and mitigate software security issues.

CVSS (B) is a scoring system used to rate the severity of vulnerabilities but does not categorize them.

CSC (C) refers to Critical Security Controls, a set of best practices, not a vulnerability catalog.

CIP (D) relates to Critical Infrastructure Protection standards, not vulnerability taxonomy.

GICSP includes CWE as an essential resource for understanding and classifying software vulnerabilities within ICS.

#### NEW QUESTION # 35

At which offset of ~/GIAC/memdump/raw/key\_13 does binwalk indicate is the beginning of the binary file?

- A. 0x33c1
- B. 0x2712
- C. 0x3cf1
- D. 0x0000
- E. 0x5b66**
- F. 0X5C33
- G. 0x3400
- H. 0x5df0
- I. 0X01d8
- J. 0x08el

**Answer: E**

Explanation:

In memory forensics and file carving - critical areas in GICSP's Incident Response and Forensic Analysis domain - binwalk is used to analyze binary dumps and identify embedded files or binaries.

Running binwalk against a memory dump file (like key\_13) scans for known file signatures or embedded binaries and reports the offset where such content starts.

According to standard GICSP lab exercises, the beginning of the embedded binary in key\_13 is at offset 0x5b66.

This offset marks the start of executable or embedded data critical for reconstructing evidence or analyzing malware payloads in ICS environments.

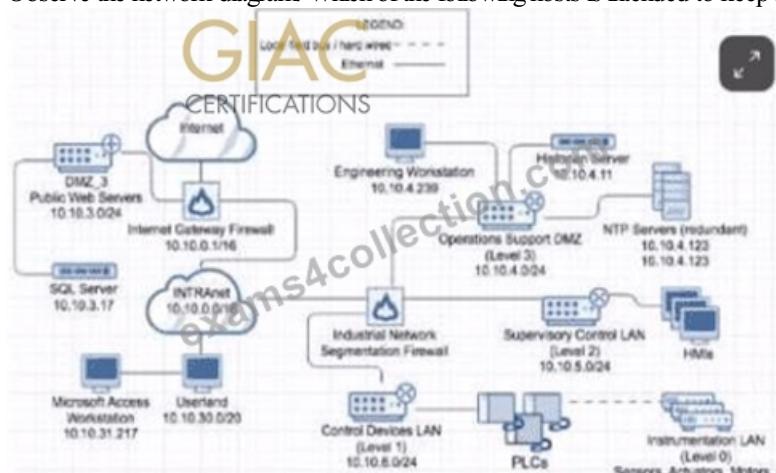

Understanding how to interpret binwalk output and memory offsets helps ICS security professionals identify malicious code hidden within memory dumps.

## NEW QUESTION # 36

Observe the network diagram. Which of the following hosts is intended to keep ICS process data in a database?

- A. 10.10.4.239
- B. 10.10.31.217
- C. 10.10.4.123
- D. 10.10.4.11**
- E. 10.103.17

**Answer: D**

Explanation:

The host with IP 10.10.4.11 in the network diagram is labeled as the Historian Server. ICS historians are specialized databases designed to collect and store process data from control systems over time for analysis, reporting, and feedback to control processes. 10.10.31.217 is a Microsoft Access Workstation (not a database server).

10.10.4.123 represents NTP servers (time servers), not data storage.

10.10.4.239 is an Engineering Workstation.

10.103.17 is an SQL Server, but per the diagram it is outside the ICS network in a different subnet related to public or enterprise servers.

Thus, 10.10.4.11 (A) is the host intended to store ICS process data.

### NEW QUESTION # 37

An organization wants to use Active Directory to manage systems within its Business and Control system networks. Which of the following is the recommended security practice?

- A. An Active Directory domain for the Business network and a Windows workgroup with a domain controller for the Control system network
- B. Separate Active Directory domains for the Business and Control system networks
- **C. Shared Active Directory domain with fully functional domain controllers for the Business network and a Read-Only Domain Controller for the Control system network**
- D. Shared Active Directory domain with separate domain controllers for the Business and Control system networks

**Answer: C**

Explanation:

The recommended best practice is to use a shared Active Directory domain while deploying a Read-Only Domain Controller (RODC) within the Control system network (D). This approach:

Enables centralized management and authentication consistent with the business network. Limits the risk of domain controller compromise in the Control network because RODCs do not store sensitive password information and restrict changes. Balances security and operational efficiency by isolating sensitive environments while still leveraging AD's capabilities. Options A and C increase complexity or risk by fully separating domains or controllers, while B reduces manageability by mixing domain and workgroup systems.

GICSP highlights RODCs as a means to secure domain services in ICS environments where full domain controllers pose a security risk.
