UiPath-ADPv1 Test Pattern | UiPath-ADPv1 Test Practice

PrepPDF is a website for UiPath Certification UiPath-ADPv1 Exam to provide a short-term effective training. UiPath UiPath-ADPv1 is a certification exam which is able to change your life. IT professionals who gain UiPath UiPath-ADPv1 authentication certificate must have a higher salary than the ones who do not have the certificate and their position rising space is also very big, who will have a widely career development prospects in the IT industry in.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q38-Q43):

NEW QUESTION # 38

Following UiPath best practices, which project structure is best-suited for complex processes in UiPath Studio?

- A. Sequence
- **B. State Machine**
- C. Flowchart
- D. Global Exception Handler

Answer: B

Explanation:

The project structure that is best-suited for complex processes in UiPath Studio, following UiPath best practices, is State Machine. A State Machine is a type of workflow that consists of a set of states, transitions, and triggers. A state represents a stage of the process, a transition represents a change from one state to another, and a trigger represents a condition or an event that activates a transition. A State Machine is suitable for complex processes because it can handle multiple paths and branches, depending on the logic and the triggers of the workflow. A State Machine can also handle loops and retries, as well as parallel execution of states. A State Machine can be created by using the State Machine activity in UiPath Studio, or by using the REFramework template, which is based on a State Machine structure. NEW QUESTION # 39

Which of the following is an outcome of converting a personal workspace into a folder in UiPath Orchestrator?

- **A. The owner of the initial workspace is added by default to the newly created folder and assigned the Folder Administrator role.**
- B. The owner of the initial workspace and the admin user are added by default to the newly created folder and assigned the Personal Workspace Administrator role.
- C. The owner of the initial workspace loses access to the newly created folder and the existing admin users are added by default.
- D. The admin user is added by default to the newly created folder with the User Administrator role.

Answer: A

Explanation:

The outcome of converting a personal workspace into a folder in UiPath Orchestrator is that the owner of the initial workspace is added by default to the newly created folder and assigned the Folder Administrator role.

A personal workspace is a special type of folder that is created automatically for each user in Orchestrator and allows them to work on their own automation projects without affecting other users or folders. A personal workspace can be converted into a regular

folder if the user wants to share their work with other users or move it to another folder. When a personal workspace is converted into a folder, the owner of the workspace becomes the owner of the folder and gets the Folder Administrator role, which gives them full permissions to manage the folder and its contents. The folder also inherits the permissions and settings of the parent folder, which is the Default folder by default. The admin user is not added to the folder by default, but they can access the folder as a Tenant Administrator if they have that role. NEW QUESTION # 40

On 10/04/2023 five Queue Items were added to a queue. What is the appropriate processing sequence for Queue Items based on their properties?

Instructions: Drag the Queue Item found on the "Left" and drop on the correct Process Sequence found on the "Right".

The screenshot shows the UiPath Queue Editor interface. On the left, under 'Queue Item', there are five items:

- No deadline, Priority = High
- Deadline = 10/04/2023, Priority = Low
- Deadline = 10/05/2023, Priority = High
- Deadline = 10/05/2023, Priority = Normal
- Deadline = 10/06/2023, Priority = High

On the right, under 'Process Sequence', there are five empty slots labeled 1st, 2nd, 3rd, 4th, and 5th.

Answer:

Explanation:

The screenshot shows the UiPath Queue Editor interface after dragging the Queue Items to the Process Sequence. The items are ordered as follows:

- 1st: Deadline = 10/04/2023, Priority = Low
- 2nd: No deadline, Priority = High
- 3rd: Deadline = 10/05/2023, Priority = High
- 4th: Deadline = 10/05/2023, Priority = Normal
- 5th: Deadline = 10/06/2023, Priority = High

Explanation:

The processing sequence for queue items in UiPath Orchestrator is determined primarily by the deadline and priority of each item. Items with an earlier deadline are processed first. If multiple items have the same deadline, then priority determines the order: High, Normal, then Low.

Following this logic, the processing sequence would be:

1st: Deadline = 10/04/2023 Priority = Low Since this is the only item with the deadline of the current day (assuming today is 10/04/2023), it should be processed first regardless of its priority.

2nd: No deadline Priority = High Although this item has no deadline, its high priority places it next in the sequence after items with a deadline for the current day.

3rd: Deadline = 10/05/2023 Priority = High This item is next due to its combination of an imminent deadline and high priority.

4th: Deadline = 10/05/2023 Priority = Normal This item has the same deadline as the third but a lower priority, so it comes next.

5th: Deadline = 10/06/2023 Priority = High This item, while high priority, has the latest deadline, so it is processed last.

So the order would be:

1st: Deadline = 10/04/2023 Priority = Low 2nd: No deadline Priority = High 3rd: Deadline = 10/05/2023 Priority = High 4th: Deadline = 10/05/2023 Priority = Normal 5th: Deadline = 10/06/2023 Priority = High

NEW QUESTION # 41

Which one is a feature of UiPath Solutions Management?

- A. Environment-specific configuration file
- B. Process execution set
- C. Orchestrator bundle
- **D. Solution package**

Answer: D

Explanation:

Solution packages are part of UiPath Solutions Management, which helps manage complex automations by bundling workflows, dependencies, assets, and configurations together. These packages are used to promote automations between environments, support version control, and ensure consistency across deployments.

NEW QUESTION # 42

You are tasked with automating a process that requires secure, persisted, and accessible data storage across multiple systems. What is the most suitable benefit of UiPath Data Service for this scenario?

- A. It stores data on local machines with integrated security for each user's session.
- B. It integrates directly with third-party cloud storage services to manage data externally.
- **C. It provides secured, persisted storage in a central location accessible to all UiPath products.**
- D. It enables real-time data processing only in attended workflows with no data persistence.

Answer: C

Explanation:

UiPath Data Service offers a centralized, secure, and persistent data storage solution, natively integrated across UiPath products like Studio and Orchestrator. It enables developers to define and manage entities and relationships, and use them across processes - ideal for workflows requiring data consistency and accessibility across multiple systems.
