## Latest ISTQB-CTFL Test Materials - ISTQB-CTFL 100% Accuracy

Once you learn all ISTQB-CTFL questions and answers in the study guide, try Dumps4PDF's innovative testing engine for exam like ISTQB-CTFL practice tests. These tests are made on the pattern of the ISTQB real exam and thus remain helpful not only for

the purpose of revision but also to know the real exam scenario. To ensure excellent score in the exam, Dumps4PDF's braindumps are the real feast for all exam candidates. They contain questions and answers on all the core points of your exam syllabus. Most of these questions are likely to appear in the ISTQB-CTFL Real Exam.

## ISTQB-Foundation Level Exam Sample Questions (Q49-Q54):

### NEW QUESTION # 49

Which ONE of the following elements is TYPICALLY used to guide testing during exploratory testing?

- A. A test charter that defines the testing objectives for the test session.
- B. A predefined test case that must be executed exactly as documented.
- C. A detailed test script that prescribes all the steps to be performed.
- D. A comprehensive specification that must be fully available before testing begins.

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation: Exploratory testing is an unscripted approach where testers actively design and execute tests based on their intuition, experience, and knowledge of the system. A test charter (A) provides a guideline on what areas to explore, defining test objectives but leaving room for dynamic adaptation.

\* (B), (C), and (D) contradict exploratory testing principles, which focus on freedom rather than rigid documentation.

\* Exploratory testing is especially useful in agile environments, usability testing, and uncovering unexpected defects.

### NEW QUESTION # 50

A requirement specifies that if the total amount of sales (TAS) made during the year by a corporate seller is 300,000€ or more, the bonus that must be paid to the seller is 100% of a certain amount agreed upon at the beginning of the year. The software contains a fault as it implements this requirement with the decision "IF (TAS = 300,000)" instead of "IF (TAS >= 300,000)". The application of the 3-value boundary value analysis to this problem consists of the following three test cases (TAS is an integer variable):

TC1 = 299,999 TC2 = 300,000 TC3 = 300,001

Which of the following statements is TRUE?

- A. TC2 would highlight the fault
- B. None of the three test cases would highlight the fault.
- C. TC3 would highlight the fault
- D. TC1 would highlight the fault

**Answer: A**

Explanation:

The requirement specifies that a bonus should be paid if the total amount of sales (TAS) made during the year is 300,000€ or more. The software incorrectly implements this requirement with "IF (TAS = 300,000)" instead of "IF (TAS >= 300,000)". Using boundary value analysis (BVA), which is a common technique in software testing, the three test cases provided (TC1 = 299,999, TC2 = 300,000, and TC3 = 300,001) cover the critical boundary values around the condition.

\* TC1 tests just below the boundary (299,999),

\* TC2 tests exactly at the boundary (300,000),

\* TC3 tests just above the boundary (300,001).

Since the software incorrectly checks for TAS equal to 300,000, only TC2 will fail because the condition is exactly met and highlights the incorrect implementation of the decision logic.

### NEW QUESTION # 51

The following open incident report provided:

Date: 01.01.01

Description: When pressing the stop button the application status remain in "Attention" instead of "Ready".

Severity: High

Life Cycle: Integration

Which of the following details are missing in the given incident report?

I. Identification or configuration of the application

- II. The name of the developer
- III. Recommendation of the developer
- IV The actions and/or conditions that came before the pressing of the button

- **A. I, IV**
- B. I, II
- C. IV
- D. II, III

**Answer: A**

Explanation:

In an incident report, essential details provide context and facilitate the investigation and resolution of the incident. The missing elements in the given incident report are:

I: Identification or configuration of the application: This detail is crucial as it specifies which version or configuration of the application is affected, helping in reproducing the issue. IV. The actions and/or conditions that came before pressing the button: Understanding the sequence of actions leading to the issue is vital for replicating and diagnosing the problem.

The name of the developer (II) and the recommendation of the developer (III) are not typically included in an incident report as they do not contribute to identifying or resolving the incident. The focus is on the incident's details, reproduction steps, and the system's state rather than on personnel or proposed solutions at this stage.

Therefore, option B, which includes both I and IV, is the correct answer.

#### NEW QUESTION # 52

Which of the following is correct with regards to debugging?

- **A. Debugging identifies the cause of a failure**
- B. Debugging is often performed by test engineers
- C. Debugging is intended to find as many defects as possible in the code
- D. Debugging is considered part of the testing activities

**Answer: A**

Explanation:

Debugging is the process of finding, analyzing and removing the causes of failures in software. Debugging is not considered part of testing, but rather a development activity that can involve testing. Debugging is not intended to find as many defects as possible, but rather to fix the specific failure that was observed. Debugging is usually performed by developers, not by test engineers. Verified

#### NEW QUESTION # 53

Which of the following is a correct reason to apply test automation?

- A. When a new test automation tool is launched
- **B. When there are a lot of repetitive testing tasks**
- C. When it is easy to automate
- D. When it is cheap to buy test automation tools

**Answer: B**

Explanation:

A correct reason to apply test automation is when there are a lot of repetitive testing tasks. Test automation is the use of software tools or scripts to perform or support testing activities, such as test case execution, test result comparison, test data generation, etc. Test automation can be beneficial when there are a lot of repetitive testing tasks that need to be performed frequently or consistently, such as regression testing, performance testing, load testing, etc. Test automation can help to save time and effort, increase reliability and accuracy, and improve coverage and efficiency of testing. The other options are not correct reasons to apply test automation.

When a new test automation tool is launched is not a reason to apply test automation, but rather a factor for choosing a test automation tool. When it is easy to automate is not a reason to apply test automation, but rather a factor for evaluating the feasibility of test automation. When it is cheap to buy test automation tools is not a reason to apply test automation, but rather a factor for estimating the cost and benefit of test automation.
