DumpsMaterials C1000-173 exam dumps in three different formats has C1000-173 questions PDF and the facility of IBM C1000-173 dumps. We have made these IBM C1000-173 questions after counseling a lot of experts and getting their feedback. The 24/7

customer support team is available at DumpsMaterials for IBM C1000-173 Dumps users so that they don't get stuck in any hitch.

IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q15-Q20):

NEW QUESTION # 15

An organization has created an extensive number of data protection rules as part of their Cloud Pak for Data implementation. The governance team is working on developing best practices for their team to maximize this investment.

Which service can be used to create a copy of cataloged asset data with all data protection rules applied?

- A. DataStage
- B. IBM Data Virtualization
- C. Data Privacy
- D. SPSS Modeler

Answer: C

NEW QUESTION # 16

Which of the following best describes the business value of DataStage?

- A. It decreases the flexibility in handling various data formats.
- B. It solely enhances the aesthetic appeal of data reports.
- C. It increases the need for manual intervention in data processing.
- D. It reduces the operational cost by automating data integration tasks.

Answer: D

NEW QUESTION # 17

In the context of IBM Cloud Pak for Data, which statement best describes the purpose of using OpenShift Operators?

- A. To automate the deployment of Kafka clusters
- B. To manage the lifecycle of Cloud Pak services
- C. To provide logging and monitoring capabilities
- D. To enable automatic scaling of deployed services

Answer: B

NEW QUESTION # 18

An enterprise architect in a financial institute is deciding on the deployment option for Cloud Pak for Data on their existing OpenShift Container Platform cluster.

They have decided to use an automated deployment option and install Cloud Pak for Data from the cloud provider's marketplace.

What are the limitations they may face with this decision?

- A. Cloud Pak for Data operators cannot be co-located with the IBM Cloud Pak foundational services operators.
- B. Automatic installation cannot be done for any of the Cloud Pak for Data services.
- C. Cloud Pak for Data cannot be installed on an existing cluster.
- D. Partial installation of the Cloud Pak for Data has to be done manually for the first time installation.

Answer: D

Explanation:

According to the IBM Cloud Pak for Data 4.7 Installation Guide and official IBM documentation, when deploying Cloud Pak for Data (CP4D) via a cloud provider marketplace (such as Red Hat OpenShift OperatorHub or a cloud marketplace), the deployment process offers an automated installation method that simplifies the setup. However, there are certain limitations and manual steps that may be required during the initial installation phase.

* CP4D supports installation on an existing OpenShift Container Platform cluster, so option A is incorrect.

* Some core services and operators, including foundational services, can be installed automatically via operators, so option B is incorrect.

* Cloud Pak for Data operators and IBM foundational services operators can coexist in the same OpenShift cluster, so option C is incorrect.

* The official installation documentation for version 4.7 specifies that the initial installation requires manual intervention for partial installation - for example, manually setting up foundational services or configuring specific operators before automated installation of the rest of the platform can continue smoothly. This partial manual setup is especially relevant when using marketplace deployment to ensure all prerequisites and configurations are met.

Exact extract from IBM Cloud Pak for Data 4.7 Installation documentation:

"When deploying Cloud Pak for Data via the OperatorHub or cloud marketplace, the initial setup requires manual installation of foundational services operators and configuration of the cluster environment before proceeding with the automated installation of Cloud Pak for Data services. This partial manual step ensures proper configuration and avoids conflicts during automated deployment."

NEW QUESTION # 19

Which Cloud Pak for Data service is used to cleanse and shape tabular data?

- A. Data Wrangler
- B. Watson Data
- C. Data Manager
- **D. Data Refinery**

Answer: D

Explanation:

Data Refinery is the dedicated data preparation service in IBM Cloud Pak for Data. It enables users to cleanse, shape, filter, and enrich tabular datasets through a graphical interface. Users can create data preparation flows that integrate seamlessly with Watson Studio and other services. Data Manager and Data Wrangler are not services available in CP4D, and Watson Data is not a recognized component. Data Refinery is the officially supported tool for this purpose.

NEW QUESTION # 20

.....

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, our company as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our C1000-173 Exam Torrent in order to keeps latest information about C1000-173 exam.
