C-CPI-2506 Latest Exam Tips, Training C-CPI-2506 Tools

Since our company's establishment, we have devoted mass manpower, materials and financial resources into C-CPI-2506 exam materials and until now, we have a bold idea that we will definitely introduce our study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our C-CPI-2506 Practice Questions, therefore, is bound to help you pass though the exam and win a better future. We will also continuously keep a pioneering spirit and are willing to tackle any project that comes your way.

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details

Topic 1	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 2	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 3	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 4	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

SAP Certified Associate - Integration Developer Sample Questions (Q14-Q19):

NEW QUESTION # 14
Using the Test Connectivity function, you want to test a connection to a backend system. The connection is provided by a Cloud Connector. Which parameter is required for the connection test?

- A. Location ID
- B. Subaccount ID
- C. Host
- D. Connector ID

Answer: A

Explanation:
To test a connection to a backend system that is provided by a Cloud Connector, you must specify the location ID as a parameter for the connection test. The location ID is a unique identifier that represents a Cloud Connector instance in a specific network location. It is used to route requests from SAP Integration Suite to the correct Cloud Connector instance and then to the backend system. You can find the location ID in the Cloud Connector administration UI under Configuration Location ID. Reference: Cloud Connector Connectivity Tests | SAP Help Portal, Cloud Connector Configuration | SAP Help Portal

NEW QUESTION # 15
Which functionalities are used by OData?

- A. HTTP, AtomPub, and JSON
- B. TCP, AtomPub, and JSON
- C. SOAP, AtomPub, and JSON

Answer: A

Explanation:
OData uses HTTP, AtomPub, and JSON as its core functionalities. OData is an open protocol that allows the creation and consumption of queryable and interoperable RESTful APIs in a simple and standard way. OData builds on HTTP as the application protocol for transferring data between clients and servers. OData uses AtomPub as one of the formats for representing data feeds and entries in XML. OData also uses JSON as another format for representing data feeds and entries in a lightweight and human-readable way. Reference: Introducing OData - SAP Learning, OData Overview | OData - The Best Way to REST

NEW QUESTION # 16
Which data store operation can you use to save a customer ID?

- A. SELECT
- B. POST
- C. GET
- D. WRITE

Answer: D

Explanation:
In SAP Cloud Integration (part of Integration Suite), the Data Store operations allow temporary or persistent storage of messages for asynchronous processing or correlation.
WRITE # Used to save/store data (e.g., Customer ID) in the Data Store.
GET # Retrieves stored data.
SELECT # Reads stored data with filters.
POST # Not a valid Data Store operation in SAP CPI (it's an HTTP verb).
Hence, to save a customer ID, the correct operation is WRITE.

NEW QUESTION # 17
Which part of the proxy URL is provided by the initial configuration step of the API Management?

- A. Service name
- B. Version
- C. Name of the API management
- D. Virtual host

Answer: D

Explanation:
To set up the API Management capability within SAP Integration Suite, you must provide a virtual host as part of the initial configuration step. The virtual host is a host alias that identifies your organization and is used as the base URL of your API proxies.
For example, if your virtual host is myorg, your API proxy URL will look like this:
https://myorg.apimanagement.hana.ondemand.com/<api-name>. The virtual host can be changed later in the API portal settings.
Reference: Setting Up API Management Capability | SAP Help Portal, Virtual Hosts | SAP Help Portal

NEW QUESTION # 18
What are some message protocols that the AP! Management capability within SAP Integration Suite supports?
Note: There are 2 correct answers to this question.

- A. OData
- B. RFC
- C. SOAP
- D. IDoc

Answer: A,C

Explanation:
API Management in SAP Integration Suite supports HTTP-based protocols.
Supported # SOAP, OData, REST (OpenAPI).
Not supported directly # RFC and IDoc (these are legacy SAP protocols handled via Cloud Integration or On- Premise adapters, not via API Management).
Thus, the correct supported message protocols are SOAP and OData.

NEW QUESTION # 19
......

SAP Certified Associate - Integration Developer (C-CPI-2506) prep material there is. The 3 kinds of SAP C-CPI-2506

preparation formats ensure that there are no lacking points in a student when he attempts the actual C-CPI-2506 exam.
