Huawei HCIP-Collaboration V4.0 Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which of the following statements are true about the multi-level protection of the collaboration hardware platform? (Choose all that apply.)

- A. Power supply backup is provided.
- B. Network port backup is provided.
- C. Fan backup is provided.
- D. Disk backup (RAID) is provided.

Answer: A,B,C,D

Explanation:

The collaboration hardware platform implements full redundancy: network ports, fans, power supplies, and disks (RAID) - to ensure high availability and fault tolerance.

NEW QUESTION # 24

In a Huawei video conference, which of the following may cause echoes or even high-pitched noises when the local participant speaks? (Choose all that apply.)

- A. Another participant whose speaker is turned off is at the local site.
- B. The endpoint's input volume is lower than the minimum energy threshold required for echo cancellation.
- C. The microphone is too close to the speaker.
- D. An audio loop exists. The external audio device feeds back the sound from the endpoint output port to the endpoint input port.

Answer: B,C,D

Explanation:

If the input volume falls below the echo canceller's detection threshold, the device can't identify and suppress return audio, leading to echoes or squealing.

An audio loop, where output is fed back into the input, directly causes echo and feedback noise.

Placing the microphone too close to the speaker allows direct pickup of its output, resulting in echo and potential high-pitched feedback.

NEW QUESTION # 25

In the collaboration solution architecture, which of the following network elements are deployed at the media processing layer? (Choose all that apply.)

- A. CloudRSE
- B. SMC
- C. VP9860
- D. Box 310

Answer: A,C

Explanation:

The media processing layer handles core media functions such as audio/video encoding, decoding, mixing, recording, and streaming. The VP9860 is Huawei's MCU media server - deployed precisely in this media processing (media switching) layer to provide high-density encoding/decoding and mixing capabilities. CloudRSE (Cloud Recording & Streaming Engine) delivers recording and streaming services, which are also key media processing functions within this layer.

NEW QUESTION # 26

Which of the following NEs' information cannot be collected using the diagnostic information collection function (Maintenance > Diagnostic Info Collection) on the SMC web interface?

- A. SMC
- B. HW CloudLink
- C. RSE8800
- D. Box 310

Answer: D

Explanation:

The Diagnostic Information Collection feature in the SMC web UI gathers logs and status from managed hardware network elements, such as SMC-connected SC nodes, RSE8800 recording engines, and Box 310 endpoints, by selecting their device types in Maintenance > Diagnostic Info Collection. It does not support collecting diagnostic data from software clients like Huawei CloudLink.

NEW QUESTION # 27

Which of the following network elements can be utilized to centrally manage and control, remotely schedule shutdowns, and perform batch OTA upgrades for 10,000 IdeaHub ES2 Plus devices?

- A. SMC
- **B. IdeaManager**
- C. iManager U2000
- D. eSight

Answer: B

Explanation:

The IdeaManager platform is designed for large-scale IdeaHub device management, offering centralized control, remote shutdown scheduling, and batch over-the-air upgrades for fleets of up to millions of devices, including 10,000 ES2 Plus units.
