ISQI CTFL-UT (ISTQB Certified Tester-Foundation Level - Usability Testing) Certification Exam is designed to test the knowledge and skills of individuals in the field of usability testing. ISTQB Certified Tester-Foundation Level - Usability Testing certification is ideal for those who are interested in pursuing a career in software testing, particularly in the area of usability testing. ISTQB Certified Tester-Foundation Level - Usability Testing certification is recognized globally and is highly valued by employers in the software testing industry.

The CTFL-UT certification exam is divided into multiple choice questions and is available in multiple languages, making it accessible to a global audience. CTFL-UT Exam is conducted by ISQI, a leading provider of software quality assurance certifications. The CTFL-UT certification is an entry-level certification, and candidates who pass the exam can further advance their career in software testing by taking advanced certifications such as the CTAL-TA (ISTQB Certified Tester-Advanced Level - Test Analyst) or the CTAL-UT (ISTQB Certified Tester-Advanced Level - Usability Testing) certification.

ISQI ISTQB Certified Tester-Foundation Level - Usability Testing Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which of these basic approaches to a software development project follows all key elements of human-centered evaluation?

- A. Interview users, iteratively develop prototypes, and evaluate the software
- B. Define requirements, develop the software, and perform acceptance test
- C. Interview users, develop the software, and perform acceptance test
- D. Iteratively develop prototypes, perform expert reviews, and integrate found issues

Answer: A

Explanation:

Human-centered design, as defined by ISO 9241-210, emphasizes early user involvement, iterative design, and continuous usability evaluation. Option D aligns with this model as it begins with understanding user needs (interview users), proceeds through iterative prototyping (which allows for continuous improvement), and involves user evaluation. This ensures that the final product is shaped by real user input and feedback.

Options A and B lack iteration and continuous evaluation, while option C, although partially aligned, lacks explicit user involvement in the evaluation process, focusing only on expert reviews.

NEW QUESTION # 36

Which of the following are advantages of using a usability lab?

- i. The context is natural
- ii. Test sessions are easy to observe
- iii. Inexpensive setup
- iv. Similar conditions for all sessions
- v. Easy recording of sessions

- A. iii, iv & v are true, i & ii are false
- B. ii, iv & v are true, i & iii are false
- C. i, ii & v are true, iii & iv are false
- D. ii & iv are true, i, iii & v are false

Answer: B

Explanation:

Usability labs provide a controlled environment that offers several advantages for observing and recording usability test sessions. Specifically, they allow for easy observation of participants (ii), standardized conditions for each session (iv), and facilitate audio and video recording for detailed analysis (v). However, the context is not natural (i), because the lab is an artificial setting rather than the user's actual environment.

Also, setting up a professional usability lab is not inexpensive (iii); it typically involves significant costs for equipment, space, and staffing. Therefore, options ii, iv, and v are true, while i and iii are false.

NEW QUESTION # 37

Which of the following is a key activity in a usability test session?

- A. Extract usability findings and recommendations
- B. Test the set up and modify the test script if needed
- C. Moderate the usability test
- D. Talk to the participant during the completion of a task

Answer: C

Explanation:

Moderating the usability test is a core activity during the actual usability test session. The moderator guides participants through tasks, ensures the session stays on track, and avoids introducing bias. Option A (testing the setup) happens before the session, during preparation. Option C (extracting findings) occurs during analysis, after the test. Option D (talking during task execution) should be minimized unless necessary, to avoid influencing user behavior. Therefore, option B is the only correct answer aligned with best practices in usability testing.

NEW QUESTION # 38

Which of the following is a principal task of the usability tester role?

- **A. Communicate with test participant**
- B. Discuss findings from usability test
- C. Define testing tasks
- D. Perform pre-session briefing of participants

Answer: A

Explanation:

The usability tester, often synonymous with the usability test moderator in practice, is primarily responsible for interacting directly with the test participants during the usability testing sessions. This role includes communicating with participants to guide them through test tasks, answering questions without leading responses, and ensuring the session runs smoothly. Effective communication is essential to facilitate participant comfort, elicit genuine user behaviors, and capture accurate usability data.

Performing the pre-session briefing (Option A) may be done by the usability tester but is often a shared responsibility or part of test facilitation protocols. Discussing findings (Option C) typically falls to analysts or usability experts after testing sessions are completed and data analyzed. Defining testing tasks (Option D) is usually done by test designers or analysts during test planning, not during the test execution.

Therefore, communicating with test participants during testing is a core, principal task of the usability tester role.

NEW QUESTION # 39

Which of the following statements about usability testing is true?

- A. The conditions under which a usability test is done are irrelevant
- **B. Before the usability test sessions, a pilot usability test session can be conducted**
- C. A usability test consists of one usability test session
- D. The preparation of a usability test is optional

Answer: B

Explanation:

A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup, task design, and moderator instructions are clear and function as expected.

According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.
