100% Pass Quiz Microsoft - GH-200 - High-quality GitHub Actions Reliable Test Voucher
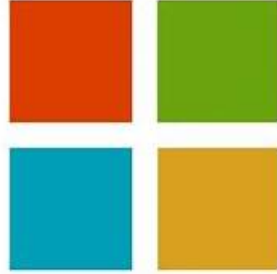

To keep pace with the times, we believe science and technology can enhance the way people study. Especially in such a fast-pace living tempo, we attach great importance to high-efficient learning. Therefore, our GH-200 study materials base on the past exam papers and the current exam tendency, and design such an effective simulation function to place you in the Real GH-200 Exam environment. We promise to provide a high-quality simulation system with advanced GH-200 study materials to help you pass the exam with ease.

The GH-200 exam questions are being offered in three different formats. The names of these formats are GitHub Actions (GH-200) desktop practice test software, web-based practice test software, and PDF dumps file. The Microsoft desktop practice test software and web-based practice test software both give you real-time Microsoft GH-200 Exam environment for quick and complete exam preparation.

Reliable GH-200 Test Prep & Reliable GH-200 Exam Materials

We offer 24 - hour, 365 – day online customer service to every user on our GH-200 study materials. Our service staff will help you solve the problem about the GH-200 training materials with the most professional knowledge and enthusiasm. We believe that can completely dispel your worries on GH-200 Exam Braindumps. So please feel free to contact us if you have any trouble on our GH-200 practice questions.

Microsoft GitHub Actions Sample Questions (Q40-Q45):

NEW QUESTION # 40
Which default GitHub environment variable indicates the owner and repository name?

- A. ENV_REPOSITORY

- B. REPOSITORY_NAME
- C. GITHUB_WORKFLOW_REPO
- D. GITHUB_REPOSITORY

Answer: D

Explanation:
Variables reference
Find information for supported variables, naming conventions, limits, and contexts in GitHub Actions workflows.
Variables include:
* GITHUB_REPOSITORY
The owner and repository name. For example, octocat/Hello-World
* Etc.
Reference:
https://docs.github.com/en/actions/reference/workflows-and-actions/variables

NEW QUESTION # 41
Which of the following statements are true regarding the use of GitHub Actions on a GitHub Enterprise Server instance? (Choose three.)

- A. Actions created by GitHub are automatically available and cannot be disabled
- B. Most GitHub authored actions are automatically bundled for use on GitHub Enterprise Server
- C. Third party actions can be manually synchronized for use on GitHub Enterprise Server
- D. Actions must be defined in the .github repository
- E. Use of GitHub Actions on GitHub Enterprise Server requires a persistent internet connection
- F. Third party actions can be used on GitHub Enterprise Server by configuring GitHub Connect

Answer: C,E,F

Explanation:
GitHub Actions on GitHub Enterprise Server often requires an internet connection, especially for accessing actions from the GitHub Marketplace or third-party actions unless they are manually synced to the server.
To use third-party actions on GitHub Enterprise Server, GitHub Connect can be used to establish a connection between the server and GitHub.com, enabling access to third-party actions.
Third-party actions can also be manually synchronized to the GitHub Enterprise Server, making them available for use in workflows.

NEW QUESTION # 42
Which choices represent best practices for publishing actions so that they can be consumed reliably? (Choose two.)

- A. tag
- B. default branch
- C. repo name
- D. commit SHA
- E. organization name

Answer: A,D

Explanation:
Using a tag is a best practice because tags are immutable and represent a fixed version of your action. By referencing tags, consumers of your action can be assured they are using a stable and specific version of the action, which helps in avoiding issues with breaking changes.
The commit SHA is another reliable way to specify a particular version of an action. By referencing a specific commit SHA, consumers can ensure they are using exactly the code that was written at that moment, avoiding the potential for changes in the future.

NEW QUESTION # 43
Which workflow commands send information from the runner? (Choose two.)

- A. setting output parameters
- B. setting a debug message
- C. reading from environment variables
- D. populating variables in a Dockerfile

Answer: A,B

Explanation:

Setting a debug message using ::debug:: command sends a message to the logs, helping with troubleshooting and providing insight into the workflow run.

Setting output parameters using ::set-output sends data from a job step to subsequent steps or jobs, which can be used later in the workflow.

NEW QUESTION # 44

What are the mandatory requirements for publishing GitHub Actions to the GitHub Marketplace?

(Each correct answer presents part of the solution. Choose two.)

- A. The name should match with one of the existing GitHub Marketplace categories.
- B. The action can be either in a public or private repository.
- C. Each repository can contain a collection of actions as long as they are under the same Marketplace category.
- D. The action's metadata file must be in the root directory of the repository.
- E. The action's name cannot match a user or organization on GitHub unless the user or organization owner is publishing the action.

Answer: D

Explanation:

Publishing actions in GitHub Marketplace

You can publish actions in GitHub Marketplace and share actions you've created with the GitHub community.

Prerequisite include:

[B] Each repository must contain a single action metadata file (action.yml or action.yaml) at the root.

The name in the action's metadata file must be unique.

The name cannot match an existing action name published on GitHub Marketplace.

[C] The name cannot match a user or organization on GitHub, unless the user or organization owner is publishing the action. For example, only the GitHub organization can publish an action named github.

https://docs.github.com/en/actions/how-tos/create-and-publish-actions/publish-in-github- marketplace

NEW QUESTION # 45

......

There are a lot of the functions on our GH-200 exam questions to help our candidates to reach the best condition befor they take part in the real exam. I love the statistics report function and the timing function most. The statistics report function helps the learners find the weak links and improve them accordingly. The timing function of our GH-200 training quiz helps the learners to adjust their speed to answer the questions and keep alert and our GH-200 study materials have set the timer.
