

300-425 Test Registration | Free 300-425 Pdf Guide

2026 Latest Fast2test 300-425 PDF Dumps and 300-425 Exam Engine Free Share: <https://drive.google.com/open?id=169pKm08amkMbywZNF9KE3nrJRx-YEdwL>

Tech firms award high-paying job contracts to Designing Cisco Enterprise Wireless Networks (300-425) certification holders. Every year many aspirants appear in the 300-425 test of the certification, but few of them cannot crack it because of not finding reliable Designing Cisco Enterprise Wireless Networks prep materials. So, you must prepare with real exam questions to pass the certification exam. If you don't rely on actual exam questions, you will fail and loss time and money.

Cisco 300-425 certification exam is aimed at professionals who want to specialize in designing and implementing enterprise wireless networks. 300-425 exam is the ideal choice for network administrators, wireless engineers, and other IT professionals who want to demonstrate their expertise in designing and implementing enterprise-level wireless networks. 300-425 Exam covers a range of topics, including the design of wireless networks, RF planning and site surveys, WLAN high availability, and more.

Free 300-425 Pdf Guide, Reliable 300-425 Test Simulator

You can try the Cisco 300-425 exam dumps demo before purchasing. If you like our Designing Cisco Enterprise Wireless Networks (300-425) exam questions features, you can get the full version after payment. Fast2test 300-425 Dumps give surety to confidently pass the Designing Cisco Enterprise Wireless Networks (300-425) exam on the first attempt.

Cisco 300-425 exam is a computer-based exam that consists of 60-70 multiple-choice and simulation questions. 300-425 exam is designed to test the candidate's abilities in designing and implementing complex wireless networks. 300-425 Exam is administered by Pearson VUE and can be taken at any Pearson VUE testing center. 300-425 exam fee is \$400 and the exam duration is 90 minutes.

Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q348-Q353):

NEW QUESTION # 348

In a warehouse deployment, why is a predictive survey often insufficient?

- A. Warehouses do not require Wi-Fi coverage
- B. Warehouses always use only 2.4 GHz Wi-Fi
- C. Predictive surveys are more expensive than passive surveys
- **D. Predictive surveys cannot account for metal racks and variable inventory**

Answer: D

NEW QUESTION # 349

An engineer must ensure that the wireless network can accomplish fast secure roaming by way of caching keys on the access points.

Which key caching mechanism is enabled by default on a Cisco AireOS WLC?

- A. OKC
- B. CCKM
- C. 802.11r
- D. SKC

Answer: A

Explanation:

Step 2 Enable sticky key caching by entering this command:

```
config wlan security wpa wpa2 cache sticky enable wlan_id
```

By default, SKC is disabled and opportunistic key caching (OKC) is enabled.

An extension of this technique known as OKC (Opportunistic Key Caching), a method not defined in 802.11i but necessary to enable optimized roaming at layer 2 for client devices moving between APs. Using OKC, all APs on the same layer 2 network will receive a copy of a client's PMK ID, enabling client devices authenticated via 802.1X to authenticate with decreased latency whilst roaming. In this fashion, even if a client has not been

NEW QUESTION # 350

Guest anchoring is configured for a newly created SSID for your company. It has been noticed that the mobility tunnels are not up, and that MPING fails from your foreign WLC to the anchor WLC. What is the reason that it is failing?

- A. A rule is needed at the firewall to allow TCP port 16666 for communication to work.
- B. A rule is needed at the firewall to allow UDP port 97 for communication to work.
- C. A rule is needed at the firewall to allow TCP port 97 for communication to work.
- D. A rule is needed at the firewall to allow UDP port 16666 for communication to work.

Answer: D

Explanation:

Guest anchoring requires mobility tunnels to be established between the foreign and anchor WLCs. For these tunnels to function, the firewall must allow specific ports for communication. UDP port 16666 is the port used for mobility traffic in Cisco wireless networks, and if it is not allowed through the firewall, MPING and mobility tunnels will fail. References: CCNP Enterprise Wireless Design ENWLS0 300-425 and Implementation ENWLSI 300-430 Official Cert Guide Premium Edition and Practice

- UDP 16666 for tunnel control traffic
- IP Protocol 97 for user data traffic
- UDP 161 and 162 for SNMP

NEW QUESTION # 351

A customer has a centralized wireless deployment with N+1 high availability and few open authentication SSIDs configured. After failover, all APs are broadcasting all SSIDs, but the clients are assigned IP addresses from a different subnet. The WLANs on both WLCs are configured with the same dynamic interfaces. Which feature must be incorporated in the wireless design of the second controller?

- A. AP Groups
- B. AAA Override
- C. VLAN Select
- D. RF Profile

Answer: C

Explanation:

VLAN Select is a feature that allows for the assignment of clients to different VLANs based on various criteria, such as user credentials or device type. In a centralized wireless deployment with N+1 high availability, incorporating VLAN Select can ensure that clients maintain consistent IP addressing across failovers, preventing them from being assigned IP addresses from a different subnet.

NEW QUESTION # 352

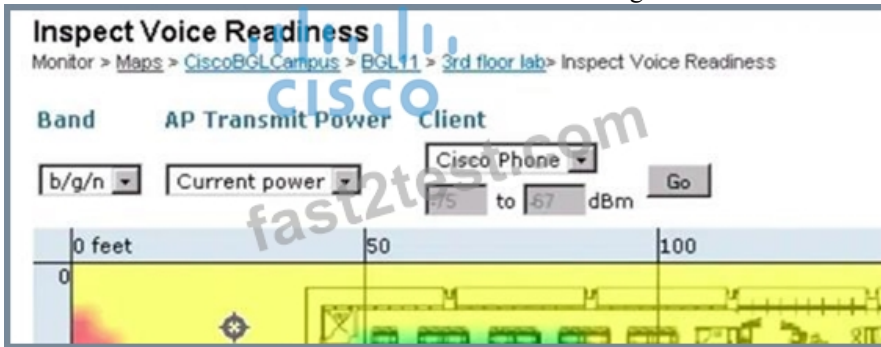

A wireless engineer is utilizing the voice readiness tool in Cisco Prime for a customer that wants to deploy Cisco IP phones. Which dBm range is the network inspected against?

- A. -85 to -67 dBm
- B. -72 to -65 dBm
- C. -85 to -65 dBm
- D. -75 to -67 dBm

Answer: D

Explanation:

Default voice minimum RSSI is -75 dBm. But cisco recommend to get RSSI better than -67 dBm
