

100% Pass Quiz 2026 Fortinet FCP_FSA_AD-5.0– Professional New Cram Materials

If you feel difficult in choosing which version of our FCP_FSA_AD-5.0 reliable exam guide, if you want to be simple, PDF version may be suitable for you. PDF version is a normal file. Many candidates are used to printing out and then writing & reading of FCP_FSA_AD-5.0 reliable exam guide on paper. Yes, it is silent and clear. Also if you have some unclearly questions, you can ask or talk with others easily. Others may just think that it is normally practice material. Also you can print out many copies of Fortinet FCP_FSA_AD-5.0 Reliable Exam Guide and share with others.

Fortinet FCP_FSA_AD-5.0 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Results analysis: This section involves understanding common attack vectors, analyzing malware behavior, and interpreting scan job reports to assess threats and make informed security decisions.
Topic 2	<ul style="list-style-type: none"> Deployment and system settings: This domain covers understanding FortiSandbox deployment within different stages of the Cyber Kill Chain, along with configuring system settings, high availability (HA) clusters, and troubleshooting system-related issues.
Topic 3	<ul style="list-style-type: none"> Integration: This domain explains how to integrate FortiSandbox within the Fortinet Security Fabric and with third-party tools, as well as identifying ATP deployments and resolving integration-related issues.
Topic 4	<ul style="list-style-type: none"> Scanning and rating components: This section focuses on FortiSandbox scanning mechanisms, including scanning components, managing guest virtual machines, and configuring scan options to properly analyze and rate suspicious files.

FCP_FSA_AD-5.0 Latest Exam Price & FCP_FSA_AD-5.0 Valid Test Labs

Our FCP_FSA_AD-5.0 qualification test guide boosts the self-learning and self-evaluation functions so as to let the clients understand their learning results and learning process of FCP_FSA_AD-5.0 exam questions , then find the weak links to improve them. Through the self-learning function the learners can choose the learning methods by themselves and choose the contents which they think are important. Through the self-evaluation function the learners can evaluate their mastery degree of our FCP_FSA_AD-5.0 test materials and their learning process.

Fortinet FCP - FortiSandbox 5.0 Administrator Sample Questions (Q10-Q15):

NEW QUESTION # 10

To allow access to the FortiSandbox GUI the administrator must configure an IP address and a default gateway. Which two commands must the administrator use to accomplish this task? (Choose two answers)

- A. set port1-ip <IP address>
- B. set default-gw <IP Address>
- C. set admin-port port1
- D. set api-port port1

Answer: A,B

Explanation:

From the Deployment and System Settings lesson, the Study Guide explicitly states:

"Initial port1 IP configuration must be performed from the console, using the commands shown on this slide. If your management computer is on a separate subnet from FortiSandbox, you must specify a gateway address using the commands shown on this slide." The two required commands are:

set port1-ip <IP address> - to assign the IP address to port1 for GUI access set default-gw <IP Address> - to configure the default gateway so the management computer can reach FortiSandbox from a different subnet Option B (set api-port port1) is for API access configuration, and Option C (set admin-port port1) is not a valid FortiSandbox CLI command for this purpose.

NEW QUESTION # 11

A security analyst is reviewing a scan job report that indicates a true positive match. The job report displays that the malware attempts to replace vital system executables. Which type of malware is the analyst observing? (Choose one answer)

- A. Trojan
- B. Rootkit
- C. Exploit
- D. Dropper

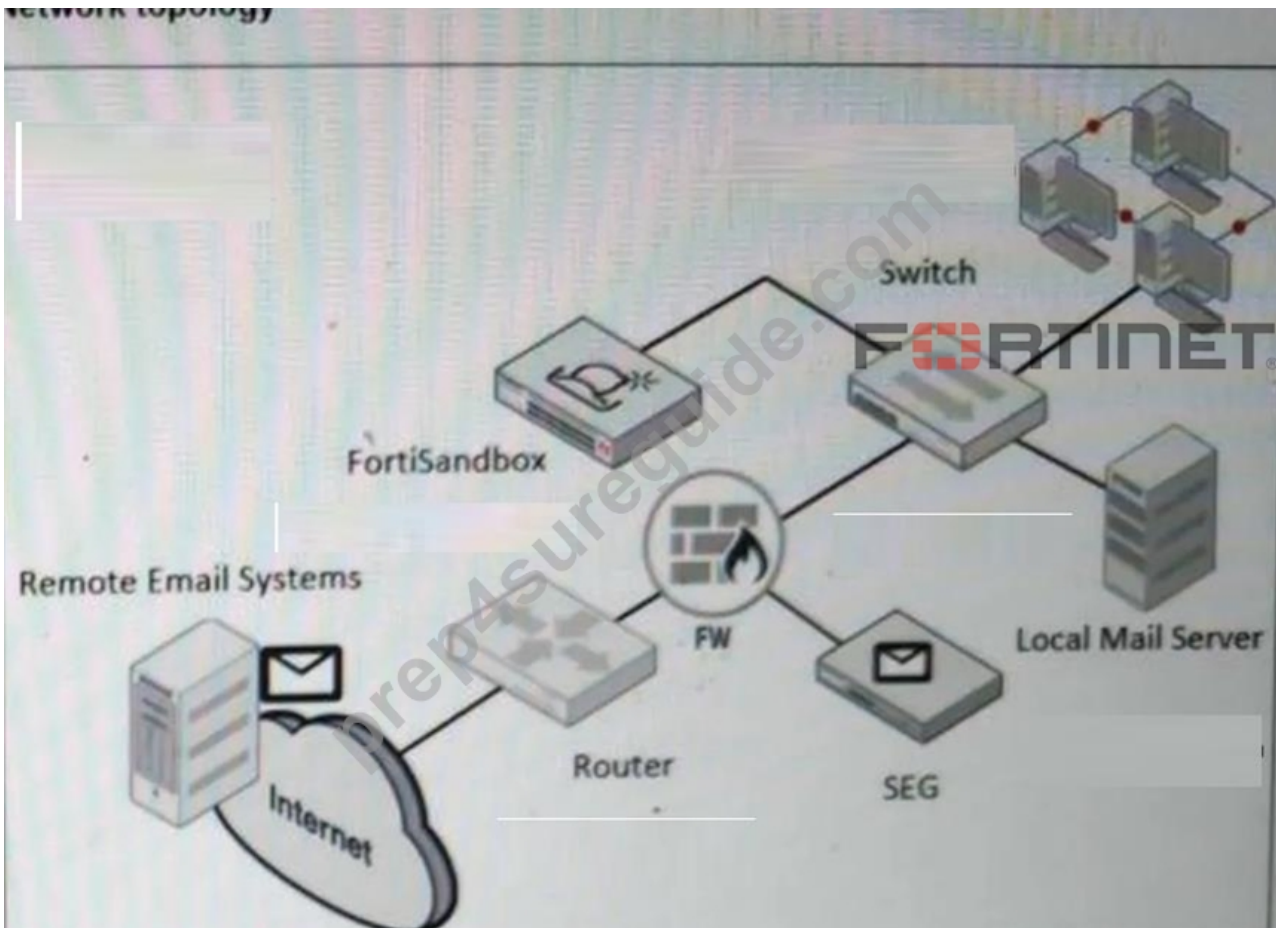

Answer: B

Explanation:

The Results Analysis section gives direct malware-type definitions. It says: "A downloader attempts to download malicious content from a remote system", "A dropper installs malicious content", "A trojan appears to be a legitimate software application", and most importantly, "A rootkit attempts to hide its components by replacing valid system files." That exact wording matches the question statement about malware attempting to replace vital system executables. Replacing valid system files is classic rootkit behavior because the purpose is concealment and persistence by hiding malicious components behind trusted operating-system files. A dropper's main role is delivering payloads. A trojan is mainly deceptive software that appears legitimate. An exploit takes advantage of a vulnerability. None of those definitions match the described behavior as precisely as the rootkit definition in the Study Guide. Therefore, the malware type being observed is Rootkit.

NEW QUESTION # 12

Refer to the exhibit.

A network topology is shown. Which two important steps must you take before you enable a BCC adapter on FortiSandbox? (Choose two answers)

- A. Configure the upstream SEG to extract files and URLs from emails and send them to FortiSandbox for analysis.
- B. Configure an A record on the DNS server for the FortiSandbox IP.
- C. Configure the sub-domain on the upstream SEG to BCC emails to FortiSandbox.
- D. Add an MX record on the DNS server for the BCC email sub-domain to resolve to the FortiSandbox IP.

Answer: C,D

Explanation:

From the Deployment and System Settings lesson, the Study Guide states:

"You can submit emails from an upstream MTA server to FortiSandbox using a BCC adapter. FortiSandbox will extract attachment files and URLs in an email body." For a BCC adapter to function correctly, two critical prerequisites must be in place:

Option C - The upstream SEG must be configured to BCC emails to a FortiSandbox sub-domain so that email copies are routed to FortiSandbox for analysis
 Option D - An MX record must be added to the DNS server for the BCC email sub-domain, so that the sub-domain resolves to the FortiSandbox IP address, allowing the SEG to properly deliver BCC email copies
 Option A is incorrect because the BCC adapter handles full email inspection - FortiSandbox itself extracts files and URLs rather than the SEG doing this.
 Option B is incorrect because an MX record (not just an A record) is the required DNS configuration for email routing.

NEW QUESTION # 13

You are troubleshooting long delays between FortiMail file submissions to FortiSandbox and verdicts being returned from FortiSandbox. Which FortiMail debug tool must you use to troubleshoot this issue further? (Choose one answer)

- A. diagnose debug application mailfilterd
- B. diagnose debug application deferd
- C. diagnose debug application oftpd
- D. diagnose debug application hoststatd

Answer: B

NEW QUESTION # 14

Refer to the exhibit.

Which two inspections will FortiSandbox perform on samples submitted for sandboxing? (Choose two answers)

- A. URL rating on HTTP GET requests
- B. IP reputation check on callback connections
- C. URL rating on FQDN seen in DNS requests
- D. Antivirus inspection on downloaded files

Answer: A,C

Explanation:

The exhibit shows the Connectivity and Services widget with VM Internet = GRAY (disabled) while Web Filter = GREEN (enabled) and Tracer/Rating = GREEN (enabled).

Since VM Internet access is disabled (SIMNET mode), the Study Guide explicitly states what CANNOT be performed:

"When the malware does a DNS query, FortiSandbox responds with an internal IP address. Performing an IP reputation lookup on an internal IP would be meaningless." - eliminates Option A

"When the malware attempts to download a file, FortiSandbox provides a fake download package. This allows the downloader to successfully execute; however, FortiSandbox cannot run its antivirus inspection on the file." - eliminates Option B

"If the malware creates a callback connection to an IP, FortiSandbox cannot rate the IP, to determine if it's a botnet server."

However, the Study Guide confirms URL rating CAN still be performed:

"FortiSandbox checks connection attempts to any URLs against the FortiGuard web filtering database."

"Similarly, FortiSandbox assesses all IP connection attempts against the FortiGuard IP rating database to identify known command-and-control (C&C) servers." Since the Web Filter service is GREEN (active), FortiSandbox can still:

Option C - Perform URL rating on HTTP GET requests using the FortiGuard web filtering database
Option D - Perform URL rating on FQDN seen in DNS requests using the FortiGuard web filtering database
These URL rating inspections use FortiSandbox's own internet connectivity (port1) to query FortiGuard, independent of the VM internet access status on port3.

NEW QUESTION # 15

.....

our advanced operation system on the FCP_FSA_AD-5.0 learning guide will automatically encrypt all of the personal information on our FCP_FSA_AD-5.0 practice dumps of our buyers immediately, and after purchasing, it only takes 5 to 10 minutes before our operation system sending our FCP_FSA_AD-5.0 Study Materials to your email address, there is nothing that you need to worry about, and we will spare no effort to protect your interests from any danger and ensure you the fastest delivery.
