

# Exam C-S43-2601 Topics, Valid Dumps C-S43-2601 Pdf

## High-Quality SAP C\_S43\_2022 Exam Dumps to achieve Your Desired Results

After you decide on PDFDumps, you achieve access for the newest preparation supplies, including C S43 2022 exam questions. Our SAP C\_S43\_2022 exam dumps are expertly curated to help you boost your expertise and prepare proficiently. These components are endorsed by sector specialists, giving valuable insights for the preparation. Use essentially the most **up-to-date C\_S43\_2022 pdf questions and answers** to prepare for the exam. The guidance supplied is authorized and ensures which you have the necessary preparation materials to increase your information and attain a higher score making use of this inexpensive resource. Seize the opportunity to rapidly meet all the certification objectives with C\_S43\_2022 certification dumps and improve your expertise efficiently.

## C\_S43\_2022 Exam Questions and Answers to Forge a Productive Profession

Prepare for the SAP Certified Application Associate exam with valid preparation components from our site, making certain superb achievement on your initially attempt. Attaining a higher score in the SAP Certified Application Associate - SAP S/4HANA Asset Management certification exam paves the way for a promising profession. Waste no time and visit PDFDumps to access advanced preparation strategies by way of C\_S43\_2022 exam questions. The offered guidance is highly successful, making your preparation seamless and absolutely free from challenges. Benefit from specialist help to attain the highest score within the exam and earn your certification employing our cost-effective C\_S43\_2022 dumps PDF. Make use of the SAP C\_S43\_2022 pdf dumps to prepare for the exam.

Get Latest C\_S43\_2022 Questions With Up To 20%  
Discount: [https://www.pdfdumps.in/C\\_S43\\_2022-exam-questions.html](https://www.pdfdumps.in/C_S43_2022-exam-questions.html)

## Keep Updated with PDFDumps for C\_S43\_2022 Exam Preparation

PDFDumps presents frequent updates for the C\_S43\_2022 exam dumps, permitting you to prepare as outlined by the latest requirements from the SAP Certified Application Associate exam. These updates are provided for an added 90 days at no added cost, guaranteeing that your preparation is usually aligned with the most existing requirements. This reputable supply of preparation delivers

You can access the premium PDF file of SAP C-S43-2601 dumps right after making the payment. It will contain all the latest C-S43-2601 exam dumps questions based on the official SAP exam study guide. These are the most relevant SAP C-S43-2601 questions that will appear in the actual SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) exam. Thus you won't waste your time preparing with outdated SAP C-S43-2601 dumps. You can go through SAP C-S43-2601 dumps questions using this PDF file anytime, anywhere even on your smartphone. The goal of a SAP C-S43-2601 Mock Exam is to test exam readiness. Test4Engine's online SAP C-S43-2601 practice test can be accessed online through all major browsers such as Chrome, Firefox, Safari, and Edge. You can also download and install the offline version of SAP C-S43-2601 practice exam software on Windows-based PCs only.

Originating the C-S43-2601 exam questions of our company from tenets of offering the most reliable backup for customers, and outstanding results have captured exam candidates' heart for their functions. Our practice materials can be subdivided into three versions. All those versions of usage has been well-accepted by them. There is not much disparity among these versions of C-S43-2601 simulating practice, but they do helpful to beef up your capacity and speed up you review process to master more knowledge about the C-S43-2601 exam, so the review process will be unencumbered.

**Valid Exam C-S43-2601 Topics offer you accurate Valid Dumps Pdf | SAP SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601)**

The SAP C-S43-2601 certification exam is a terrific and quick way to develop your profession. With just one SAP C-S43-2601 exam, you can significantly advance both personally and professionally. One of the greatest methods to advance your skills is to sign up for the SAP C-S43-2601 Certification Exam and devote all of your efforts to successfully passing the SAP C-S43-2601 exam.

## **SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q11-Q16):**

### **NEW QUESTION # 11**

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

### **Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

\* Transaction Code : Enter IP42 in the command field and press Enter .

\* Initial Screen :

\* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

\* Maintenance Strategy : Enter Z48 .

\* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

\* Description : Enter Regular pump maintenance Z48 .

\* Equipment : Enter T-PA48 .

\* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

\* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

\* Look for the Task List section at the bottom of the screen.

\* Task List Type : Enter A (General Task List).

\* Group : Enter TL-48 .

\* Counter : Enter 1 .

\* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

\* Click the Save (floppy disk) icon.

\* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

### **NEW QUESTION # 12**

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

\* Transaction : Enter IP02 (Change Maintenance Plan).

\* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

\* Scheduling Parameters Tab :

\* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

\* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

\* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

\* Transaction : Enter IP10 (Schedule Maintenance Plan).

\* Maintenance Plan : Enter your plan number and press Enter .

\* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start ).

\* Enter the "Start Date" / "Completion Date" :

\* The Rule : You must use Today's date minus 4 weeks .

\* Example: If today is April 19, enter March 22.

\* Press Enter . The system will calculate the next calls.

\* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

\* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

\* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

\* Check the following three items :

\* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

\* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

\* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .

### NEW QUESTION # 13

Task: 5

Configure and create a Maintenance Notification

The project team evaluates during the implementation project the Maintenance Notifications in SAP S/4HANA Asset Management. The following features need to be checked:

\* Configure and create a Maintenance Notification

\* Assign catalog specific data to a Maintenance Notification

\* Create a Maintenance Notification and save it. Use the following information:

\* Assign the following data to the just created notification:

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 5 Overview

The project team is evaluating Maintenance Notifications in SAP S/4HANA Asset Management. This task involves creating a notification and assigning catalog-specific data to it.

Step 1: Create the Maintenance Notification

In this step, you will record a technical problem in the system.

\* Access the Transaction : Use transaction code IW21 (Create Maintenance Notification) in the SAP GUI or the corresponding Fiori app.

\* Initial Screen :

\* Notification Type : Enter Z1 .

\* Press Enter .

\* Enter General Data :

\* Description : Enter Pump is leaking .

\* Priority : Select High .

\* Equipment : Enter T-PA48 .

\* Save : Click the Save (floppy disk) icon to generate a notification number.

Explanation : Creating a notification is the first step in the maintenance process. It documents the "what" (leaking pump), the "how critical" (high priority), and the "where" (Equipment T-PA48).

Step 2: Assign Catalog Specific Data

Now you must assign technical codes to describe the damage precisely for future reporting and analysis.

\* Access the Transaction : Use transaction code IW22 (Change Maintenance Notification) to open your recently created notification.

\* Navigate to Item Data : Go to the Items tab or the relevant section for damage and causes.

\* Enter Damage Details :

\* Damage Code Group : PMP-100 .

\* Damage Code : 1000 .

\* Description : Leaking .

\* Enter Object Part Details :

\* Object Part Code Group : PMP-Z48 .

\* Object Part Code : 1001 .

\* Description : Inlet/Outlet .

\* Enter Cause Details :

\* Cause Code Group : PMP-248 .

\* Cause Code : 2000 .

\* Description : Material fatigue .

\* Save : Click the Save icon to finalize the notification.

Explanation : Assigning catalog data categorizes the issue using standardized codes. This allows the company to run "Bad Actor" reports later to see, for example, how many pumps are failing due to "Material fatigue" versus "Operator error".

**NEW QUESTION # 14**

Task 4: Configure and create Technical Objects

The project team evaluates during the implementation project Technical Object structures in SAP S/4HANA Asset Management.

The following features need to be checked:

\* Configure and create Functional Locations

\* Create, serialize and install Equipment

\* Create Functional Location master record ZZ0##-01 and save it. Use the following information:

\* Create Equipment master record EQUI-## and save it. Use the following information:

\* Serialize the just created Equipment master record EQUI-## . Use the following data:

\* Install Equipment EQUI-## at the Functional Location 00-01-ASS-02 .

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 4: Configure and create Technical Objects

This task evaluates your ability to structure and manage the physical and functional hierarchy of assets in SAP S/4HANA Asset Management.

Step 1: Create Functional Location Master Record

A Functional Location represents the area at which a maintenance task is to be performed.

\* Access the Transaction : Use transaction code IL01 (Create Functional Location).

\* Enter Initial Data :

\* Functional Location : ZZ048-01.

\* Structure Indicator : ZZ48.

\* Functional Location Category : T.

\* Press Enter .

□ \* Enter General Data :

\* Description : Production Line Z48.

\* Enter Location and Organization Data :

\* Maintenance Plant : 1020.

\* Cost Center : 4110.

\* Planning Plant : 1020.

\* Planner Group : Z48.

\* Main WorkCtr : T-ME48.

\* Work Center Plant : 1010.

\* Save : Click the Save icon.

Explanation : By creating this record, you define a specific functional area within Plant 1020 where maintenance costs and history will be tracked for all equipment installed there.

□ Step 2: Create Equipment Master Record

Equipment represents an individual physical object that is maintained as an autonomous unit.

\* Access the Transaction : Use transaction code IE01 (Create Equipment).

\* Enter Initial Data :

\* Equipment : EQUI-48.

\* Equipment Category : T.

\* Press Enter .

□ \* Enter General Data :

\* Description : Drive Motor GR48.

\* Save : Click the Save icon.

Explanation : This step creates a master record for a physical asset-a drive motor-allowing you to track its individual lifecycle, independent of where it is currently installed.

□ Step 3: Serialize the Equipment

Serialization links a piece of equipment to a specific material and unique serial number for inventory management and tracking.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) and enter EQUI-48.

\* Navigate to Serial Data : Go to the SerData (Serial Data) tab.

\* Enter Serialization Data :

\* Material : T-PM8000.

\* Serial Number : EQUI-48.

\* Save : Click the Save icon.

Explanation : Linking the motor to Material T-PM8000 enables the system to track this specific asset as a serialized part, which is essential for warehouse movements and warranty tracking.

□ Step 4: Install Equipment at a Functional Location

This establishes the relationship between the physical asset (Equipment) and the functional area where it is operating.

\* Access the Transaction : Use transaction code IE02 (Change Equipment) for EQUI-48.

\* Modify Installation Location :

\* Click on the Structure tab.

\* Find the FunctLoc field.

\* Enter the location: 00-01-ASS-02.

\* Save : Click the Save icon.

Explanation : This installation "plugs" your drive motor into the functional hierarchy at location 00-01-ASS-02. From this point forward, any maintenance performed on this motor will be automatically associated with that location's history.

## NEW QUESTION # 15

Task 6: Configure Maintenance Order Types and work with Maintenance Orders The project team evaluates during the implementation project Maintenance Orders in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Configure a Maintenance Order Type and create a Maintenance Order
- \* Create a Time Confirmation a Maintenance Order
- \* Prepare a Maintenance Order for Completion
- \* Create a Maintenance Order and save it.

Note:

Make sure that you have maintained all required customizing settings for the Maintenance Order Type.

Use the following information at header level:

- Plan a Maintenance Order Operation and use the following information:
  - \* Create a Time Confirmation for the just created Maintenance Order. Use the following information:
  - \* Display the Actual Costs assigned to the just created Maintenance Order and set it to Technically Completed. Display the Settlement Rule.

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 6 Overview

The goal of this task is to process a repair from start to finish. You will convert the "leaking pump" notification into a work order, plan the labor, record the work performed, and technically close the file.

Step 1: Create the Maintenance Order from Notification

Instead of starting from scratch, we link the order to the notification you created in Task 5.

- \* Access the Transaction : Use transaction code IW31 .
- \* Initial Screen :
- \* Order Type : PM01.
- \* Notification : Enter your notification number (e.g., 10000147).
- \* Press Enter .
- \* Header Data :
- \* The description "Pump is leaking" should pull in automatically.
- \* Main Work Center : Ensure it is T-ME48.

Explanation : By entering the notification number, SAP automatically pulls in the equipment, functional location, and problem description, ensuring "data integrity" across the maintenance process.

Step 2: Plan the Operations (Labor)

You must tell the system how much effort the repair requires.

- \* Go to the Operations Tab .
- \* Enter Planning Data :
- \* Work : 2.
- \* Unit (Un) : H (Hours).
- \* Number : 1 (One person).
- \* Duration (Dur.) : 2 / Unit : H.
- \* Add Enhancement Data :
- \* Click the Additional Data tab - > Enhancement sub-tab.
- \* In the Field Key box, use the search (F4) to select 0000001 (User-defined fields).
- \* In the first text box ( Text 1 ), type: Industrial Z48.

Explanation : Planning the work allows the system to calculate the estimated cost of the repair. The

"Enhancement" data is used to store specific technical details (like the motor type) that aren't in the standard SAP fields.

Step 3: Release the Order

An order in "Created" (CRTD) status is just a plan. To start work, it must be "Released" (REL).

- \* Release : Look at the top toolbar and click the Green Flag icon .
- \* Verify Status : The "Sys.Status" field should now include REL.
- \* Save : Click the Save (floppy disk) icon.

Explanation : Releasing the order is the "Green Light" for the shop floor. It allows technicians to charge time to the job and warehouse staff to issue parts.

Step 4: Time Confirmation (Recording the Work)

Now we record that the repair is physically finished.

- \* Access the Transaction : Use transaction code IW41 .

- \* Enter Data :
- \* Order : Enter your order number (e.g, 4000395).
- \* Actual Work : 2 H.
- \* Check the boxes for Final Confirmation and No Remaining Work .
- \* Confirmation Text : Pump repaired and tested.
- \* Save : Click the Save icon.

Explanation : This step captures the "Actual Cost." SAP multiplies the 2 hours of labor by the hourly rate of work center T-ME48 to calculate exactly how much this repair cost the company.

Step 5: Technical Completion (TECO)

The final administrative step to close the repair file.

- \* Access the Transaction : Use transaction code IW32 .
- \* Complete Technically :
- \* Go to menu: Order > Functions > Complete > Complete (technically) .
- \* Click the Green Checkmark on the popup window.
- \* Save : Click the Save icon.

Explanation : TECO (Technical Completion) locks the order. It tells the system the asset is back in service and prevents any further labor or parts from being charged to this specific job.

## NEW QUESTION # 16

.....

Are you still worried about whether or not our C-S43-2601 materials will help you pass the exam? Are you still afraid of wasting money and time on our materials? Don't worry about it now, our C-S43-2601 materials have been trusted by thousands of candidates. They also doubted it at the beginning, but the high pass rate of us allow them beat the C-S43-2601 at their first attempt. What most important is that your money and exam attempt is bound to award you a sure and definite success with 100% money back guarantee. You can claim for the refund of money if you do not succeed to pass the C-S43-2601 Exam and achieve your target. We ensure you that you will be paid back in full without any deduction.
