Confronting a tie-up during your review of the exam? Feeling anxious and confused to choose the perfect CAS-004 latest dumps to pass it smoothly? We understand your situation of susceptibility about the exam, and our CAS-004 test guide can offer timely help on your issues right here right now. Without tawdry points of knowledge to remember, our experts systematize all knowledge for your reference. You can download our free demos and get to know synoptic outline before buying. We offer free demos as your experimental tryout before downloading our Real CAS-004 Exam Questions. For more textual content about practicing exam questions, you can download our products with reasonable prices and get your practice begin within 5 minutes.

CAS-004 study guide can bring you more than you wanted. After you have used our products, you will certainly have your own experience. Now let's take a look at why a worthy product of your choice is our CAS-004 actual exam. Firstly, with a high pass rate of 98% to 100%, you will get the pass guarantee form our CAS-004 Practice Engine. Secondly, the price of our CAS-004 learning guide is quite favourable than the other websites'.

Reliable CAS-004 Study Plan - CAS-004 Premium Exam

Do you want to get the CAS-004 exam braindumps as quickly as you finish paying, then choose the CAS-004 study material of us, we can do this for you. You can pass the exam only just need to spend about 48 to 72 hours in practicing. The CAS-004 exam braindumps of us is verified by experienced experts, therefore the quality and the accuracy of the CAS-004 Study Materials can be guaranteed, and we also pass guarantee and money back guarantee for your fail to pass the exam.

CompTIA CASP+ certification exam focuses on the practical application of cybersecurity knowledge in real-world scenarios. It tests the ability of candidates to assess and respond to security risks, implement solutions, and communicate effectively with stakeholders. CompTIA Advanced Security Practitioner (CASP+) Exam certification is recognized globally and provides a competitive edge to professionals seeking to advance their careers in cybersecurity. Passing the CompTIA CASP+ exam demonstrates a high level of expertise and proficiency in advanced cybersecurity concepts, making it an essential credential for

security professionals.

CompTIA Advanced Security Practitioner (CASP+) Exam Sample Questions (Q531-Q536):

NEW QUESTION # 531

A security architect for a large, multinational manufacturer needs to design and implement a security solution to monitor traffic. When designing the solution, which of the following threats should the security architect focus on to prevent attacks against the OT network?

- A. Application of an unsupported encryption algorithm
- B. Packets that are the wrong size or length
- C. Multiple solicited responses over time
- D. Use of any non-DNP3 communication on a DNP3 port

Answer: C

NEW QUESTION # 532

A cloud security architect has been tasked with selecting the appropriate solution given the following:

* The solution must allow the lowest RTO possible.

* The solution must have the least shared responsibility possible.

« Patching should be a responsibility of the CSP.

Which of the following solutions can BEST fulfill the requirements?

- A. IaaS
- B. SaaS
- C. Private
- D. PaaS

Answer: B

Explanation:

SaaS, or software as a service, is the solution that can best fulfill the requirements of having the lowest RTO possible, the least shared responsibility possible, and patching as a responsibility of the CSP. SaaS is a cloud service model that provides users with access to software applications hosted and managed by the CSP over the internet. SaaS has the lowest RTO (recovery time objective), which is the maximum acceptable time for restoring a system or service after a disruption, because it does not require any installation, configuration, or maintenance by the users. SaaS also has the least shared responsibility possible because most of the security aspects are handled by the CSP, such as patching, updating, backup, encryption, authentication, etc.

NEW QUESTION # 533

A developer wants to develop a secure external-facing web application. The developer is looking for an online community that produces tools, methodologies, articles, and documentation in the field of web-application security. Which of the following is the BEST option?

- A. PCI DSS
- B. NIST
- C. ICANN
- D. CSA
- E. OWASP

Answer: E

NEW QUESTION # 534

In preparation for the holiday season, a company redesigned the system that manages retail sales and moved it to a cloud service provider. The new infrastructure did not meet the company's availability requirements. During a postmortem analysis, the following issues were highlighted:

1. International users reported latency when images on the web page were initially loading.

2. During times of report processing, users reported issues with inventory when attempting to place orders.
 3. Despite the fact that ten new API servers were added, the load across servers was heavy at peak times.
 Which of the following infrastructure design changes would be BEST for the organization to implement to avoid these issues in the future?

- A. Increase the bandwidth for the server that delivers images, use a CDN, change the database to a non-relational database, and split the ten API servers across two load balancers.
- B. Serve images from an object storage bucket with infrequent read times, replicate the database across different regions, and dynamically create API servers based on load.
- **C. Serve static content via distributed CDNs, create a read replica of the central database and pull reports from there, and auto-scale API servers based on performance.**
- D. Serve static-content object storage across different regions, increase the instance size on the managed relational database, and distribute the ten API servers across multiple regions.

Answer: C

NEW QUESTION # 535

A company has hired a security architect to address several service outages on the endpoints due to new malware. The Chief Executive Officer's laptop was impacted while working from home. The goal is to prevent further endpoint disruption. The edge network is protected by a web proxy.

Which of the following solutions should the security architect recommend?

- A. Add a firewall module on the current antivirus solution.
- B. Remove the web proxy and install a UTM appliance.
- **C. Replace the current antivirus with an EDR solution.**
- D. Implement a deny list feature on the endpoints.

Answer: C

Explanation:

Replacing the current antivirus with an EDR (endpoint detection and response) solution is the best solution for addressing several service outages on the endpoints due to new malware. An EDR solution is a technology that provides advanced capabilities for detecting, analyzing, and responding to threats or incidents on endpoints, such as computers, laptops, mobile devices, or servers. An EDR solution can use behavioral analysis, machine learning, threat intelligence, or other methods to identify new or unknown malware that may evade traditional antivirus solutions. An EDR solution can also provide automated or manual remediation actions, such as isolating, blocking, or removing malware from endpoints. Removing the web proxy and installing a UTM (unified threat management) appliance is not a good solution for addressing service outages on endpoints due to new malware, as it could expose endpoints to more threats or attacks by removing a layer of protection that filters web traffic, as well as not provide sufficient detection or response capabilities for endpoint-specific malware. Implementing a deny list feature on endpoints is not a good solution for addressing service outages on endpoints due to new malware, as it could be ineffective or impractical for blocking new or unknown malware that may not be on the deny list, as well as not provide sufficient detection or response capabilities for endpoint-specific malware. Adding a firewall module on the current antivirus solution is not a good solution for addressing service outages on endpoints due to new malware, as it could introduce compatibility or performance issues for endpoints by adding an additional feature that may not be integrated or optimized with the antivirus solution, as well as not provide sufficient detection or response capabilities for endpoint-specific malware.
