

# ECCouncil 312-50v13 PDF Questions - Most Effective Exam Preparation Method

What's more, part of that BraindumpsPass 312-50v13 dumps now are free: [https://drive.google.com/open?id=1U07nO\\_YybH-SSX7icKAEjxBj-8PDrxSr](https://drive.google.com/open?id=1U07nO_YybH-SSX7icKAEjxBj-8PDrxSr)

Beyond knowing the answer, and actually understanding the 312-50v13 test questions puts you one step ahead of the test. Completely understanding a concept and reasoning behind how something works, makes your task second nature. Your 312-50v13 quiz will melt in your hands if you know the logic behind the concepts. Any legitimate 312-50v13 prep materials should enforce this style of learning - but you will be hard pressed to find more than a 312-50v13 practice test anywhere other than BraindumpsPass.

Do you long to get the 312-50v13 certification to improve your life? Are you worried about how to choose the learning product that is suitable for you? If your answer is yes, we are willing to tell you that you are a lucky dog, because you meet us, it is very easy for us to help you solve your problem. The 312-50v13 latest question from our company can help people get their 312-50v13 certification in a short time.

## 312-50v13 New Real Test | Valid 312-50v13 Test Practice

Our company BraindumpsPass has been putting emphasis on the development and improvement of our 312-50v13 test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the 312-50v13 Exam, but add what the exam truly tests into our 312-50v13 exam guide. So we have adamant attitude to offer help rather than perfunctory attitude. It will help you pass your 312-50v13 exam in shortest time.

## ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q320-Q325):

### NEW QUESTION # 320

A "Server-Side Includes" attack refers to the exploitation of a web application by injecting scripts in HTML pages or executing arbitrary code remotely.

Which web-page file type, if it exists on the web server, is a strong indication that the server is vulnerable to this kind of attack?

- ☐ A. .rss
- ☒ B. .stm
- ☐ C. .html
- ☐ D. .cms

Answer: B

Explanation:

In CEH v13 Module 13: Hacking Web Applications, Server-Side Includes (SSI) is defined as a method for dynamically generating web content through directives embedded in HTML files.

stm File Extension:

Associated with Server Side Includes (SSI).

Files like .stm, .shtml, and .shtm can embed server-side directives.

Vulnerable if user input is improperly handled, allowing command injection or arbitrary file access.

Option Clarification:

A: .stm: Correct - indicates SSI is enabled.

B: .html: Static file, not associated with SSI.

C: .rss: XML feed; irrelevant to SSI.

D: .cms: Generic; doesn't indicate SSI functionality.

Reference:

Module 13 - Server-Side Vulnerabilities

CEH iLabs: Exploiting SSI with .stm files

### NEW QUESTION # 321

Mary found a high vulnerability during a vulnerability scan and notified her server team. After analysis, they sent her proof that a fix to that issue had already been applied. The vulnerability that Mary found is called what?

- A. Backdoor
- B. False-negative
- C. Brute force attack
- D. False-positive

**Answer: D**

Explanation:

<https://www.infocye.com/blog/2019/02/16/cybersecurity-101-what-you-need-to-know-about-false-positives-and-false-negatives/>

False positives are mislabeled security alerts, indicating there is a threat when in actuality, there isn't. These false/non-malicious alerts (SIEM events) increase noise for already over-worked security teams and can include software bugs, poorly written software, or unrecognized network traffic.

False negatives are uncaught cyber threats - overlooked by security tooling because they're dormant, highly sophisticated (i.e. file-less or capable of lateral movement) or the security infrastructure in place lacks the technological ability to detect these attacks.

### NEW QUESTION # 322

An attacker with access to the inside network of a small company launches a successful STP manipulation attack. What will he do next?

- A. He will repeat this action so that it escalates to a DoS attack.
- B. He will activate OSPF on the spoofed root bridge.
- C. He will create a SPAN entry on the spoofed root bridge and redirect traffic to his computer.
- D. He will repeat the same attack against all L2 switches of the network.

**Answer: C**

Explanation:

Spanning Tree Protocol (STP) manipulation attacks involve an attacker injecting BPDUs (Bridge Protocol Data Units) to force a switch to recognize the attacker's system as the root bridge. Once this is achieved, the attacker can:

Redirect traffic through their own machine

Create a SPAN (Switched Port Analyzer) session to mirror traffic

Intercept, sniff, or modify data passing through the network

This is typically the next logical step in an STP attack to facilitate a Man-in-the-Middle (MITM) position.

Reference - CEH v13 Official Study Guide:

Module 8: Sniffing

Quote:

"An attacker who becomes the root bridge using STP manipulation can redirect traffic and use SPAN ports to mirror traffic to their system for analysis or manipulation." Incorrect Options:

B: OSPF is a Layer 3 routing protocol, not relevant here.

C: DoS is not the goal of this specific attack.

D: Attacking all switches is inefficient and unnecessary once root access is gained.

#### NEW QUESTION # 323

Jacob works as a system administrator in an organization. He wants to extract the source code of a mobile application and disassemble the application to analyze its design flaws. Using this technique, he wants to fix any bugs in the application, discover underlying vulnerabilities, and improve defense strategies against attacks.

What is the technique used by Jacob in the above scenario to improve the security of the mobile application?

- A. App sandboxing
- B. Social engineering
- C. Jailbreaking
- D. Reverse engineering

**Answer: D**

#### NEW QUESTION # 324

A corporation migrates to a public cloud service, and the security team identifies a critical vulnerability in the cloud provider's API. What is the most likely threat arising from this flaw?

- A. Distributed Denial-of-Service (DDoS) attacks on cloud servers
- B. Unauthorized access to cloud resources
- C. Physical security compromise of data centers
- D. Compromise of encrypted data at rest

**Answer: B**

Explanation:

The CEH Cloud Computing module identifies cloud APIs as one of the most critical attack surfaces in public cloud environments. APIs control provisioning, configuration, authentication, and management of cloud resources.

A vulnerability in a cloud API can allow attackers to:

- \* Bypass authentication
- \* Escalate privileges
- \* Access or modify cloud resources
- \* Create or delete services

Option B is therefore correct.

Option A relates to availability, not API flaws.

Option C is managed by the provider and unrelated to APIs.

Option D would require key compromise, not just API weakness.

CEH strongly emphasizes API security as a top cloud risk.

#### NEW QUESTION # 325

.....

With 312-50v13 guide torrent, you can easily pass professional qualification exams of various industries, even if you are not a college graduate, and you have never come into contact with this professional knowledge. With 312-50v13 exam torrent, you can also quickly get started, easily grasp the key points of the exam, and gain access to well-known companies. 312-50v13 Guide Torrent helps you to use the least time to get the maximum improvement. With our 312-50v13 certification training, you pay for money, but you can get time and knowledge that money cannot buy.
