In short, we live in an age full of challenges. So we must continually update our knowledge and ability. If you are an ambitious person, our DCA exam questions can be your best helper. There are many kinds of DCA study materials in the market. You must have no idea to choose which one. It does not matter. Our Docker Certified Associate guide braindumps are the most popular products in the market now. Just buy our DCA learning quiz, and you will get all you want.

Docker Certified Associate (DCA) certification exam covers a broad range of topics related to Docker technologies and tools. DCA exam evaluates your understanding of Docker architecture, installation, configuration, and administration. Additionally, it assesses your skills in container orchestration using Docker Swarm and Kubernetes, Docker networking, storage, security, and troubleshooting. The DCA certification exam is a practical and hands-on exam that requires you to demonstrate your proficiency in Docker technologies and tools.

Docker DCA is an excellent certification program for professionals who want to validate their Docker knowledge and skills. Docker Certified Associate (DCA) Exam certification exam is comprehensive and covers all the essential topics related to Docker containerization. Docker DCA certification is a valuable credential that can help professionals advance their careers and achieve their goals.

Detailed DCA Answers & Online DCA Training

But there are question is that how you can pass the DCA exam and get a certificate. The best answer is to download and learn our DCA quiz torrent. Our products will help you get what you want in a short time. You just need little time to download and install it after you purchase, then you just need spend about 20~30 hours to learn it. We are glad that you are going to spare your precious time to have a look to our DCA Exam Guide.

Docker Certified Associate (DCA) Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114

One of several containers in a pod is marked as unhealthy after failing its livenessProbe many times. Is this the action taken by the orchestrator to fix the unhealthy container?

Solution: The controller managing the pod is autoscaled back to delete the unhealthy pod and alleviate load.

- A. Yes
- B. No

Answer: A

NEW QUESTION # 115

Which statement is true?

- A. CMD shell format uses this form ["param", param, "param"]
- B. ENTRYPOINT cannot be used in conjunction with CMD
- C. CMD is used to run the software in the image along with any arguments
- D. ENTRYPOINT cannot be overridden in the "docker container run" command

Answer: A

NEW QUESTION # 116

Is this a type of Linux kernel namespace that provides container isolation?

Solution: Network

- A. Yes
- B. No

Answer: A

Explanation:

Network is a type of Linux kernel namespace that provides container isolation. Network namespaces isolate the system resources associated with networking, such as network interfaces, IP addresses, routing tables, firewall rules, etc. Each network namespace has its own virtual network stack, and processes in different network namespaces can communicate through virtual network devices or tunnels¹. Network namespaces are used by Docker to create isolated networks for containers, and allow users to customize the network configuration and connectivity of each container². Reference:

NEW QUESTION # 117

Your organization has a centralized logging solution, such as Splunk.

Will this configure a Docker container to export container logs to the logging solution?

Solution: docker system events - --filter splunk

- A. No
- B. Yes

Answer: A

Explanation:

The command `docker system events --filter splunk` will not configure a Docker container to export container logs to the logging solution. The command `docker system events` will display real-time events from the Docker daemon, such as container creation, start, stop, etc. The `--filter` option will filter the events by various criteria, such as type, label, name, etc. However, there is no filter for splunk, and even if there was, it would only show the events related to Splunk, not the container logs. To configure a Docker container to export container logs to Splunk, you need to use the Splunk logging driver, which is a plugin that sends container logs to HTTP Event Collector in Splunk Enterprise and Splunk Cloud. You can use the `--log-driver` and `--log-opt` options when creating or running a container to specify the Splunk logging driver and its options, such as the Splunk token, URL, source, sourcetype, index, etc. Alternatively, you can configure the Splunk logging driver as the default logging driver for the Docker daemon by setting the `log-driver` and `log-opts` keys in the `daemon.json` file and restarting Docker. * docker system events

* Splunk logging driver

* How to send Docker containers logs to Splunk?

NEW QUESTION # 118

Will a DTR security scan detect this?

Solution: known vulnerabilities or exposures in binaries

- A. Yes
- B. No

Answer: A

NEW QUESTION # 119
