The operating system of B2C-Commerce-Architect exam practice has won the appreciation of many users around the world. Within five to ten minutes after your payment is successful, our operating system will send a link to B2C-Commerce-Architect Training Materials to your email address. After our B2C-Commerce-Architect study guide update, our operating system will also send you a timely message to ensure that you will not miss a single message.

After years of unremitting efforts, our B2C-Commerce-Architect exam materials and services have received recognition and praises by the vast number of customers. An increasing number of candidates choose our B2C-Commerce-Architect study braindumps as their exam plan utility. There are a lot of advantages about our B2C-Commerce-Architect training guide. Not only our B2C-Commerce-Architect learning questions are always the latest and valid, but also the prices of the different versions are quite favourable.

## **B2C-Commerce-Architect Study Plan & B2C-Commerce-Architect Valid Exam Duration**

The B2C-Commerce-Architect learning materials are of high quality, mainly reflected in the adoption rate. As for our B2C-Commerce-Architect exam question, we guaranteed a higher passing rate than that of other agency. More importantly, we will promptly update our B2C-Commerce-Architect quiz torrent based on the progress of the letter and send it to you. 99% of people who use our B2C-Commerce-Architect Quiz torrent has passed the exam and successfully obtained their certificates, which undoubtedly show that the passing rate of our B2C-Commerce-Architect exam question is 99%. So our B2C-Commerce-Architect study guide is a good choice for you.

The Salesforce Certified B2C Commerce Architect certification exam covers topics such as B2C Commerce concepts, data modeling, site design and architecture, performance optimization, and integration with other systems. Candidates are expected to have hands-on experience in implementing B2C Commerce solutions and be able to demonstrate their ability to design and optimize

complex B2C Commerce systems. Salesforce Certified B2C Commerce Architect certification is recognized globally and is a valuable asset for professionals seeking to advance their careers in the B2C Commerce domain.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q40-Q45):

### NEW QUESTION # 40

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Only use GET methods over HTTPS.
- B. Ensure the CSRF protection is validated on form submission.
- C. Automatically renew the CSRF Token if expired.
- D. Only use POST methods over HTTPS.

**Answer: B,D**

Explanation:

For implementing CSRF (Cross-Site Request Forgery) protection correctly, especially in forms like promotion code submissions during checkout, best practices include:

Option A (Ensure the CSRF protection is validated on form submission): It is crucial to validate the CSRF token upon the form's submission to ensure that the request originates from a legitimate source and corresponds to the user's intended actions, enhancing security against CSRF attacks.

Option D (Only use POST methods over HTTPS): Using POST methods for transmitting form data helps mitigate the risk of CSRF attacks as opposed to GET methods which can be manipulated more easily via URL. Ensuring the communication is over HTTPS encrypts the transmission, securing the data from interception or tampering during transit.

These practices safeguard against common security vulnerabilities and ensure that the application adheres to secure coding standards.

### NEW QUESTION # 41

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the localServiceRegistry code:

How does this code sample accomplish authentication to the service provider?

- A. By disabling Basic Auth and executing the service authentication call.
- B. By Issuing a Basic Auth request to the service provider.
- C. By wrapping the authentication service call with Basic Auth.
- D. By performing a signed SOAP Auth request using a certificate.

**Answer: A**

Explanation:

The code sample shows the creation of a service request to a third-party service provider, where the authentication method is explicitly set to 'NONE' using the line `svc.setAuthentication("NONE");`. This configuration implies that the request does not use Basic Authentication or any embedded credentials like client ID and secret in the HTTP headers for authentication purposes. Instead, it builds the authentication details into the request body, which suggests that the service expects credentials as part of the payload rather than as part of the standard authentication headers, thus effectively disabling Basic Auth for this transaction.

### NEW QUESTION # 42

A client receives multiple feeds from third parties on the same SFTP location:

- \* Product prices (sftp: prod/prices)
- \* Stores information (sftp: prod/stores;
- \* Product information (sftp: prod/catalog)
- \* Categories information (sftp: prod/marketing)
- \* Content (sftp: prod/marketing)

Some of the feeds are placed on sftp multiple times a day, as the information is updated in the source system.

The Architect decides to have only two jobs:

- \* One that checks and downloads available feeds every hour

\* One that imports the files from Webdav once a day before the data replication, using the standards steps available in the Job Framework Which design is correct for the import Job, taking the steps scope in consideration?

- A. - four sibling flows execute steps in parallel: import products, stores, prices, content  
- fifth flow executes: import categories  
- last flow executes steps in sequence: reindex
- B. -Four sibling flows execute steps in parallel: import products, stores, price, content  
-last flow executes steps in sequence: import:categories, reindex
- C. - four sibling flows execute steps in parallel: import products, stores, prices, content  
- last flow executes steps in sequence import categories, reindex
- D. - three sibling flows import steps in parallel: import products, stores, prices  
- fourth flow executes: import categories  
- last flow executes steps in sequence: reindex, import content

**Answer: B**

### NEW QUESTION # 43

An Architect is performing an audit of production logs via Log Center and finds some potentially dangerous custom log output. In which two ways is this log output improper in a production environment? Choose 2 answers

- A. The log information includes the order number and customer's email, which violates PCI.
- B. The log information includes the customer's card CVV (card security code) and expiration date, which violates PCI.
- C. The log information includes the customer's card name as it appears along with the credit card number (PAN), which violates PCI.
- D. Information logs should not be used in a production environment

**Answer: A,C**

Explanation:

In a production environment, logging sensitive customer information such as credit card details (PAN, CVV, expiration date) can lead to severe security and compliance issues, specifically violating PCI DSS (Payment Card Industry Data Security Standard) requirements. The standards strictly prohibit the storage of CVV codes and mandate that any PAN displayed must be masked. Storing such data in logs is not only a risk for data breaches but also non-compliance with these standards can lead to penalties.

\* Option A: Including the customer's card name along with the full credit card number in logs is a clear violation of PCI DSS requirements, which stipulate that no more than the last four digits of the card number may be displayed.

\* Option B: Logging the card security code (CVV) and expiration date is explicitly prohibited by PCI DSS, which requires that sensitive authentication data, including CVV, must never be stored post-authentication, even if it is encrypted.

### NEW QUESTION # 44

A client has a single site with multiple domains, locales, and languages. After launch, there is a need for the client to perform offline maintenance. The client would like to show the same maintenance page for each locale.

Which version of aliases, json file below will accomplish this task?

- A.
- B.
- C.
- D.

**Answer: D**

Explanation:

Option C correctly addresses the requirement for showing the same maintenance page across multiple locales by having each different domain alias ("nto.eu", "nto.at", "nto.de") mapped to the same www domain ("www.nto.eu"). This setup allows all traffic, regardless of the original locale-specific domain, to be directed to a single, unified maintenance page hosted under the "www.nto.eu" domain. This ensures consistency in the maintenance message presented to all users, irrespective of their regional domain.

### NEW QUESTION # 45
