## Microsoft Power Platform Solution Architect 認定 PL-600 試験問題 (Q45-Q50):

### 質問 #45

A company plans to use Power BI.

The company plans to share reports indefinitely with a specific set of users.

You need to recommend a solution.

Which solution should you recommend?

- A. Embed code by using the Publish to web option.
- B. Embed code by using the website or portal option.
- C. Share directly with the users.
- D. Share by using a link.

正解: D

解説:

<https://learn.microsoft.com/en-us/power-bi/collaborate-share/service-share-dashboards> Things to keep in mind about sharing reports and dashboards:

Both reports and dashboards can be shared to users through direct access; however, only reports can be shared via links that give access to the report and underlying data.

#### 質問 #46

You need to recommend methods for assigning security to each group of users.

The customer provides the following requirements:

Customers need the ability to submit a case through an online portal.

Portal must handle 75 concurrent users submitting cases.

Service data must be retained for at least six years.

You need to determine which requirements are functional or non-functional.

Which requirements are functional or non-functional? To answer, drag the appropriate types to the correct requirements. Each type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

#### 質問 #47

You are reviewing a list of business requirements submitted by a plumbing company.

The company has the following requirements:

- \* Send articles to technicians to allow technicians to help customers resolve issues.
- \* Track work progress and inspections at customer sites.
- \* Schedule technicians for service appointments.

You need to recommend solutions to meet the customer's requirements.

What should you recommend? To answer, drag the appropriate solutions to the correct business requirements.

Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

正解:

解説:

□ Explanation:

Box 1: Dynamics 365 Customer Insights

Dynamics 365 Customer Insights is a part of Microsoft's customer data platform (CDP) that helps deliver personalized customer experiences. The platform's capabilities provide insights into who your customers are and how they engage with your platform. Unify customer data across multiple sources to get a single view of customers.

Box 2: Dynamics 365 Field Service

Dynamics 365 Field Service helps to:

Organize and track resolution of customer issues

□

Keep customers updated with the status of their service call and when it's resolved

□ Note: The Dynamics 365 Field Service business application helps organizations deliver onsite service to customer locations. The application combines workflow automation, scheduling algorithms, and mobility to set up mobile workers for success when they're onsite with customers fixing issues.

The Field Service application enables you to:

Improve first-time fix rate

Complete more service calls per technician per week

Manage follow-up work and take advantage of upsell and cross sell opportunities Reduce travel time, mileage, and vehicle wear and tear

Organize and track resolution of customer issues Communicate an accurate arrival time to customers

Provide accurate account and equipment history to the field technician

Keep customers updated with the status of their service call and when it's resolved

Schedule onsite visits when it's convenient for the customer Avoid equipment downtime through preventative maintenance

Box 3: Dynamics 365 Field Service Dynamics 365 Field Service: Schedule onsite visits when it's convenient for the customer.

#### 質問 #48

A company is implementing Dynamics 365 Sales.

The company has turned off out-of-the-box quote calculations in order to implement its own custom calculations.

When users update a line item on a quote, they expect to see an updated total for the quote in real time. Users are reporting inconsistent behavior, with some aggregations taking up to two hours.

You review the system design and notice many asynchronous workflows.

You need to recommend a solution to enable the calculation in real time.

Which two options should you recommend? Each answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Convert the asynchronous workflows to a synchronous plug-in.
- B. Consolidate asynchronous workflow into a single real-time workflow.
- C. Consolidate multiple asynchronous workflows into a single asynchronous workflow.
- D. Implement a business process flow to replace the existing workflows.

正解: A、B

解説:

Having a BPF won't necessarily answer the requirement but changing the workflows logic to a sync plugin will work, even though we'll probably need to write more code

#### 質問 #49

A company plans to create a Power Platform solution that integrates with Dynamics 365 Sales.

The solution must meet the following requirements:

Connect directly with a Microsoft Azure SQL database as an external data source at run time where specific data is available in the Dynamics 365 Sales solution without the need for data replication.

An external system needs to send data to the company's Dynamics 365 Sales solution.

You need to recommend the most suitable solution to integrate Dynamics 365 Sales with both systems.

What should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

□

正解:

解説:

□ Explanation

Graphical user interface, text, application Description automatically generated

□ Box 1: Use Virtual tables

A virtual entity is a custom entity in Dynamics 365 Customer Engagement (on-premises) that has fields containing data from an external data source. Virtual entities appear in your app to users as regular entity records, but contain data that is sourced from an external database, such as an Azure SQL Database. Records based on virtual entities are available in all clients including custom clients developed using the Dynamics 365 Customer Engagement Web Services.

Box 2: Use Dynamics 365 Web API.

Dynamics 365 Web Services API: Many times, straight database-to-database integrations aren't a possibility. In these cases, the development of a solution may depend on utilization of the Dynamics 365 Customer Engagement web services API (Application Programming Interface).
