## 最新的 Salesforce Consultant Analytics-Con-201 免費考試真題 (Q57-Q62):

### 問題 #57

A CRM Analytics consultant is asked to make sure the new sales performance dashboard is accessible in the mobile app. They have created multiple mobile layouts for the same dashboard.

How is CRM Analytics expected to perform?

- A. If more than one layout is eligible, the one with the most device properties set is used.
- B. If more than one layout is eligible, the one with the most global filters is used.
- C. If more than one layout is eligible, the one with the most widgets is used.

答案： A

#### 問題 #58

Cloud Kicks needs a CRM Analytics consultant to install the Appointment Analytics App. After installation, they realize the wrong field was picked and the app did not have access to a newly created field that should be used instead of the old one. What is the first step the consultant should take to prevent erroneous dataset/dashboard creation?

- A. Update the app with the new field after installation.
- B. Cancel running installations from Setup
- C. Stop the recipe from running in Data Manager.

答案： C

#### 解題說明：

If the wrong field is selected in the initial setup of an app or dataset, it is important to stop any data processing activities (like recipe executions) to prevent erroneous data from being loaded into datasets and dashboards. In this case, stopping the recipe from running in Data Manager is the correct first step. Once the recipe is stopped, the consultant can update the field selection or make other necessary corrections before restarting the process.

#### 問題 #59

The CRM Analytics consultant at Universal Containers notices that some users have access to sensitive data and dashboards they should not have access to in the Manager's app. How should the consultant fix the problem?

- A. Create separate apps, datasets, and dashboards, and share them with the proper users.
- B. Apply data encryption using Salesforce Shield.
- C. Develop separate dashboards and datasets and put them in the Manager's app.

答案： A

#### 問題 #60

A consultant is tasked with creating a dataset and a dashboard for a sales team. During the requirements gathering, it was highlighted that security of the data is important.

It was noted that the Opportunity object has organization-wide defaults set to Private with access via the role hierarchy. Sales wants to keep this security in place for the dashboard. Looking at the Opportunity data, the consultant sees that the VP of sales can have access to up to 20,000 records and is unsure if sharing inheritance can be used.

Which approach ensures data security for the new Opportunity dataset?

- A. Enable Inherit Sharing from Salesforce in the analytics settings and set Opportunity as the source on the dataset.
- B. Flatten the role hierarchy in the dataflow recipe and set a security predicate based on Opportunity owner and role path.
- C. Run the Sharing Inheritance Coverage Assessment for the Opportunity object in the analytics settings.

答案： C

#### 解題說明：

For ensuring that the security settings on the Opportunity object are appropriately replicated in the CRM Analytics environment, running the Sharing Inheritance Coverage Assessment is an effective strategy. Here's why:

\* Assessment of Inheritance Feasibility: This tool assesses whether sharing rules on the Opportunity object can be effectively inherited in the analytics environment, ensuring that the organization-wide defaults and role hierarchy are maintained.

\* Identification of Limitations: The assessment will identify any potential issues or limitations with inheriting sharing settings due to the large number of records (up to 20,000 for the VP of Sales), providing clear insights on how to proceed.

\* Guided Decision Making: Based on the outcome of the assessment, the consultant can make informed decisions about whether to directly inherit sharing or consider alternative strategies like flattening the role hierarchy or using security predicates.

## 問題 #61

A CRM Analytics consultant is performing column profiling on dimension column in a recipe. Newly-added rows are not being considered in the Results tab of the profile even though a sync was run for that specific object. What is causing the issue?

- A. The sample does not include changes to the connected object data within the last 24 hours.
- B. Column profiling is not applicable on a dimension column in a recipe.
- C. Sync operation has not run properly with the new dimension column in the recipe.

答案: A
