The UiPath (ADPv1) Automation Developer Professional (UiPath-ADPv1) practice questions (desktop and web-based) are customizable, meaning users can set the questions and time according to their needs to improve their discipline and feel the real-based exam scenario to pass the UiPath UiPath-ADPv1 Certification. Customizable mock tests comprehensively and accurately represent the actual UiPath-ADPv1 certification exam scenario.

## UiPath UiPath-ADPv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.</li></ul>

## Quiz 2026 Fantastic UiPath Learning UiPath-ADPv1 Materials

Prep4sureGuide is a very good website to provide a convenient service for the UiPath certification UiPath-ADPv1 exam. Prep4sureGuide's products can help people whose IT knowledge is not comprehensive pass the difficult UiPath certification UiPath-ADPv1 exam. If you add the UiPath Certification UiPath-ADPv1 Exam product of Prep4sureGuide to your cart, you will save a lot of time and effort. Prep4sureGuide's product is developed by Prep4sureGuide's experts' study of UiPath certification UiPath-ADPv1 exam, and it is a high quality product.

## UiPath (ADPv1) Automation Developer Professional Sample Questions (Q155-Q160):

### NEW QUESTION # 155

At indication time, the Strict Selector has the following functionalities available:

- A. Accuracy, Open in UiExplorer, Copy to clipboard. Show all matches.
- B. Open in UiExplorer, Copy to clipboard, Show all matches.**
- C. Ignore text. Copy to clipboard. Show all matches.
- D. Refresh, Open in UiExplorer, Copy to clipboard.

## Answer: B

Explanation:

The Strict Selector is a targeting method that uses the selector information of a UI element to identify it on the screen. It is one of the four targeting methods available in UiPath Studio, along with Fuzzy Selector, Image, and Computer Vision1. The Strict Selector is considered to be the most reliable and stable targeting method, as it uses the attributes and properties of the UI element that are unlikely to change2.

At indication time, the Strict Selector has the following functionalities available:

- \* Open in UiExplorer: This option opens the UiPath Explorer window, where you can inspect and edit the selector information of the indicated UI element, as well as use advanced features such as anchors, wildcards, variables, and regex3.
- \* Copy to clipboard: This option copies the selector information of the indicated UI element to the clipboard, so you can paste it elsewhere, such as in a text editor or another activity.
- \* Show all matches: This option highlights all the UI elements on the screen that match the selector information of the indicated UI element. This helps you to check if there are any duplicates that might cause the automation to fail at runtime. You can also use the Ignore text option to exclude the text attribute from the selector information, which might reduce the number of matches4.

The other options are incorrect because:

- \* Option A is incorrect because it does not include the Show all matches option, which is available for the Strict Selector.
- \* Option B is incorrect because it does not include the Open in UiExplorer option, which is available for the Strict Selector.
- \* Option D is incorrect because it includes the Accuracy option, which is not available for the Strict Selector. The Accuracy option is only available for the Image targeting method, which allows you to adjust the similarity threshold between the indicated image and the target image5.

## NEW QUESTION # 156

How does UiPath handle different dependency versions for multiple running processes that run at the same time?

- A. Running processes use the earliest compatible dependency version.
- B. **Each running process uses its own required version of the dependency.**
- C. All running processes use the latest version of the dependency available.
- D. Each running process automatically adapts to the available dependency version.

## Answer: B

Explanation:

UiPath handles different dependency versions for multiple running processes that run at the same time by using the concept of isolation. This means that each running process uses its own required version of the dependency, without affecting or being affected by other processes. This ensures that the processes run smoothly and consistently, regardless of the dependency versions. The isolation is achieved by using the NuGet protocol, which allows the robot to download and store the dependencies in a local cache folder. The robot then loads the dependencies from the cache folder into separate application domains for each process, creating isolated environments for each process. References: [Managing Dependencies], [About the NuGet Protocol]

## NEW QUESTION # 157

What is the purpose of the Interval filter in the Orchestrator's Monitoring page?

- A. It enables you to sort the displayed data based on job priorities.
- B. It allows you to allocate licenses per machine for the displayed data.
- C. It allows you to choose between background and foreground processes for the displayed data.
- D. **It allows you to control the granularity of the displayed data and check the health of your system in either the last day or the last hour.**

## Answer: D

## NEW QUESTION # 158

Which of the following statements is true about the existing UiPath Studio installation packages?

- A. The Unattended Robot installation package installs only UiPath Studio, Assistant, and Robot.
- B. **The Attended Robot installation package installs only the UiPath Robot.**
- C. The Attended Robot installation package installs only UiPath Studio, and Robot.
- D. The Automation Developer installation package installs only UiPath Studio, Assistant, and Robot.

### Answer: B

Explanation:

The statement that is true about the existing UiPath Studio installation packages is that the Attended Robot installation package installs only the UiPath Robot. The UiPath Robot is the component that executes the automation workflows designed in UiPath Studio. The Attended Robot installation package is intended for scenarios where the Robot works on the same machine as a human user and requires human input or supervision. The Attended Robot installation package does not include UiPath Studio or UiPath Assistant.

UiPath Studio is the component that allows the developer to design and debug the automation workflows.

UiPath Assistant is the component that allows the user to manage and run the automation workflows on their machine. The Unattended Robot installation package and the Automation Developer installation package both include UiPath Studio, UiPath Assistant, and UiPath Robot, but they are intended for different scenarios. The Unattended Robot installation package is for scenarios where the Robot works on a dedicated machine and does not require human input or supervision. The Automation Developer installation package is for scenarios where the developer needs to create and test the automation workflows on their machine. References: [UiPath Installation Guide], [UiPath Robot], [UiPath Studio], [UiPath Assistant]

## NEW QUESTION # 159

What is the purpose of the Invoke Code activity in UiPath?

- A. Invokes VB MET or Java code optionally passing it a list of input arguments
- B. **Invokes VB.NET or C# code, optionally passing it a list of input arguments.**
- C. Invokes Java code, optionally passing it a list of input arguments.
- D. Invokes VB MET code optionally passing it a list of input arguments

### Answer: B

## NEW QUESTION # 160

.....

There are three different versions of our UiPath-ADPv1 preparation prep including PDF, App and PC version. Each version has the suitable place and device for customers to learn anytime, anywhere. In order to give you a basic understanding of our various versions on our UiPath-ADPv1 Exam Questions, each version offers a free trial. So there are three free demos of our UiPath-ADPv1 exam materials. And you can easily download the demos on our website.
