CCFA-200b Best Practice & New CCFA-200b Exam Questions

In this information-dominated society, boosting plenty stocks of knowledge and being competent in some certain area can establish yourself in society and help you get a high social status. Passing CCFA-200b certification can help you realize these goals and find a good job with high income. If you buy our CCFA-200b Practice Test you can pass the CCFA-200b exam successfully and easily. And if you study with our CCFA-200b exam questions for only 20 to 30 hours, you will pass the CCFA-200b exam easily.

CrowdStrike Certified Falcon Administrator - 2024 Version Sample Questions (Q22-Q27):

NEW QUESTION # 22

You want the Falcon Cloud to push out sensor version changes but you also want to manually control when the sensor version is upgraded or downgraded. In the Sensor Update policy, which is the best Sensor version option to achieve these requirements?

- A. Sensor version updates off
- B. Auto - N-1
- **C. Specific sensor version number**
- D. Auto - TEST-QA

Answer: C

Explanation:

The administrator can choose a specific sensor version number in the Sensor Update policy to manually control when the sensor version is upgraded or downgraded. This will allow the Falcon Cloud to push out sensor version changes, but only when the administrator changes the version number in the policy. The other options will either automate the sensor version updates or turn them off completely.

NEW QUESTION # 23

How do user permissions function in Falcon?

- A. Each Falcon permission needs to be selected when the user account is created
- B. User permissions grow more restrictive, the more roles assigned to a user the less capabilities they would potentially have
- **C. User permissions are cumulative, the more roles assigned to a user the more capabilities they would potentially have**
- D. Custom user role permission sets are shared with all CrowdStrike customers globally

Answer: C

NEW QUESTION # 24

The alignment of a particular prevention policy to one or more host groups can be completed in which of the following locations within Falcon?

- **A. Policy alignment is configured in each policy in the "Assigned Host Groups" tab**
- B. Policy alignment is configured only once during the initial creation of the policy in the "Create New Policy" pop-up window

- C. Policy alignment is configured in the "Host Management" section in the Hosts application
- D. Policy alignment is configured in the General Settings section under the Configuration menu

Answer: A

Explanation:

The alignment of a particular prevention policy to one or more host groups can be completed in each policy in the "Assigned Host Groups" tab. This tab allows the administrator to select which host groups will use the policy, as well as view the number of hosts and sensors assigned to each group. The other options are either incorrect or not available.

NEW QUESTION # 25

What happens to detections in the console after clicking "Disable Detections" for a host from within the Host Management page?

- A. New detections are disabled for 30 days
- B. Existing detections for the host remain
- **C. The detections for the host are removed from the console immediately**
- D. All detection data for the host is deleted and the host is hidden from view

Answer: C

Explanation:

After clicking Disable Detections for a host, detections for that host are removed from the console immediately, and new detections do not display going forward unless detections are re-enabled. This action suppresses console detection visibility for the host; it does not uninstall the sensor or stop the sensor from operating. Existing detection data remains available in Event Search, but it is removed from the Endpoint detections console view. This distinction is important: disabling detections affects detection display and DetectionSummaryEvent behavior, not all telemetry collection or prevention policy processing. The course guide contrasts this with deleting a host, where prior detections remain visible. For Disable Detections specifically, the immediate console effect is removal of detections.

NEW QUESTION # 26

Which of the following applies to Custom Blocking Prevention Policy settings?

- A. You can only blocklist hashes via the API
- B. Executions blocked via hash blocklist may have partially executed prior to hash calculation process remediation may be necessary
- **C. Hashes must be entered on the Prevention Hashes page before they can be blocked via this policy**
- D. Blocklisting applies to hashes, IP addresses, and domains

Answer: C

Explanation:

Falcon allows you to upload hashes from your own black or white lists. To enable this navigate to the Configuration App, Prevention hashes window, and click on "Upload Hashes" in the upper right-hand corner. Note that you can also automate the task of importing hashes with the CrowdStrike Falcon API.

NEW QUESTION # 27

.....

Infinite striving to be the best is man's duty. We have the responsibility to realize our values in the society. Of course, you must have enough ability to assume the tasks. Then our CCFA-200b study materials can give you some help. First of all, you can easily pass the exam and win out from many candidates. The CCFA-200b certificate is hard to get. If you really crave for it, our CCFA-200b study materials are your best choice. We know it is hard for you to make decisions. You will feel sorry if you give up trying.
