Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q25-Q30):

NEW QUESTION # 25
A project team is tasked with implementing several common integration patterns for their new Guidewire Cloud application. They want to maximize efficiency and leverage existing Guidewire resources to provide a strong starting point for development efforts. Which resources should the team prioritize utilizing as pre-built starting points for these solutions?

- A. RACI matrices for roles and responsibilities
- B. Accelerators
- C. Application logic configuration files
- D. User Story Cards for requirements elaboration
- E. Guidewire Cloud Standards for compliance

Answer: B

Explanation:

When implementing common integration patterns in a Guidewire Cloud project, teams are encouraged to reuse proven assetsrather than building solutions from scratch. The most appropriate pre-built starting points areGuidewire Accelerators, makingOption Ecorrect.

Acceleratorsare reusable tools, templates, utilities, and reference implementations provided through the Guidewire Marketplace or Professional Services. They are specifically designed to speed up implementation by addressing common needs such as integrations, data migration, configuration utilities, and testing support.

By using accelerators, teams reduce development effort, lower risk, and ensure alignment with Guidewire Cloud Standards and best practices. Accelerators also improve consistency across projects and help maintain upgradeability.

The other options do not serve as pre-built integration starting points. Cloud Standards (Option C) define compliance rules but do not provide solution assets. User Story Cards (Option D) capture requirements but do not accelerate development. RACI matrices (Option B) and configuration files (Option A) are not reusable integration solutions.

NEW QUESTION # 26

User story cards are filled out during elaboration and contain details about_____.

- A. Guiding Principles
- B. Product configuration steps
- C. Design elements including Ul Mock up and Type-lists
- D. Validation and Business Rules

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

During Elaboration Workshops, the primary goal is to define the behavior of the system required to satisfy the business need. This is captured on the User Story Card primarily through Validation and Business Rules (Option C).

* Functional Logic:The core "detail" of a user story is theAcceptance Criteria. Acceptance Criteria are essentially a list of Business Rules (what the system must do) and Validations (what the system must check/prevent) to be considered "Done."

* Analyst Role:The Business Analyst's main responsibility is to document these rules to ensure the developer builds the correct logic.

Why other options are less correct:

* B. Design elements:While UI Mockups and Typelists are oftenattachedorreferenced, they represent the

"Solution Design." The User Story Card itself focuses on theRequirement(The Rules). In Guidewire SurePath methodology, specific "Design" documents (like detailed UI specs) are often secondary to the functional Acceptance Criteria (Rules) defined in the story.

* A & D:Guiding Principles are high-level project values, and Configuration Steps are developer tasks.

NEW QUESTION # 27

Which of the following are primary ways a Quality Analyst contributes to the requirements elaboration process in a Guidewire Cloud project, according to the training?

- A. To ensure the requirements are defined with sufficient detail and clarity to be testable, including acceptance criteria
- B. To facilitate discussions between business stakeholders and developers to resolve requirement ambiguities
- C. To collaborate on defining acceptance criteria using structured formats like Given-When-Then
- D. To identify potential personal biases that could influence requirements or suggested solutions
- E. To estimate the level of effort required for developing the user interface changes based on the requirements
- F. To analyze the existing system logic to identify potential impacts of new requirements

Answer: A,C

Explanation:

Comprehensive and Detailed Explanation:

In a Guidewire Cloud project, particularly one utilizing SurePath and Behavior-Driven Development (BDD), the Quality Analyst (QA) plays a proactive "Shift Left" role during the requirements elaboration phase.

* Ensuring Testability (Option B):The QA's primary lens during elaboration is "How will I test this?" They review requirements to ensure they are unambiguous, complete, and measurable. If a requirement is vague (e.g., "The system should be fast"), the QA challenges it to ensure specific acceptance criteria are defined (e.g., "The page loads in under 2 seconds").

* Collaborating on Gherkin (Option F):Guidewire methodology heavily promotes BDD. The QA collaborates with the Business Analyst and Developer (the "Three Amigos") to translate business rules into structuredGiven-When-Thenscenarios. These scenarios serve as both the requirements documentation and the executable test scripts.

Why other options are less appropriate:

* A. Facilitate discussions:While QAs participate,Business AnalystsorScrum Masterstypically facilitate the sessions.
* C. Estimate UI effort:This is the responsibility of theDevelopers. QAs estimate thetestingeffort.
* D. Analyze system logic:While QAs assess regression impact, the deep analysis of existingcode/system logicis primarily aDeveloperorArchitecttask.
* E. Identify personal biases:While critical thinking is important, it is not listed as a "primary way" of contribution compared to the concrete deliverables of Acceptance Criteria and BDD scenarios.

NEW QUESTION # 28

Elaborate Requirements, Confirm Scope, Plan Project / Sprints, and Infrastructure Sizing are all part of this project phase?

- A. Pre-Inception
- B. Development
- C. Inception
- D. Stabilization

Answer: C

Explanation:
Comprehensive and Detailed Explanation:
According to the Guidewire SurePath methodology, these specific activities are the core objectives of the Inception Phase (Option D).

* Confirm Scope:The primary goal of Inception is to move from the high-level scope defined in Pre- Inception to a detailed, agreed-upon scope (Minimum Viable Product).
* Elaborate Requirements:The team conducts workshops (often called "Elaboration" sessions) to break down high-level requirements into detailed User Stories.
* Infrastructure Sizing:While initial estimates may happen earlier, the definitive infrastructure sizing (hardware, cloud resources) is finalized during Inception once the scope and architecture are understood.
* Plan Project / Sprints:Inception concludes with a "Conceptual Sprint Plan" or release schedule, mapping out which stories will be delivered in which sprint.

Why other options are incorrect:

* A. Development:This phase is forexecutingthe plan (building and testing), not defining the scope or sizing the infrastructure.
* C. Pre-Inception:This phase is forpreparationand mobilization (staffing the team, setting up logistics), but the detailed "Elaboration" and "Sizing" happen once the full team starts in Inception.

NEW QUESTION # 29

Each Guidewire product has a set of _____ that identify common processes within the product.

- A. Themes
- B. Configuration Guide
- C. Backlog priorities
- D. Application Guides (User Guides)

Answer: A

Explanation:
Guidewire InsuranceSuite products are designed around a consistent set ofbusiness process patternsthat help analysts and implementation teams understand how functionality is organized and delivered. These common process patterns are identified throughthemes, makingOption Dthe correct answer.

Themesrepresent high-level groupings of related functionality within a Guidewire product. Examples include policy lifecycle management, claims handling, billing operations, and customer account management. Themes help analysts quickly understand how business processes map to Guidewire capabilities and provide a structured way to explore product functionality during elaboration and requirement definition.

Themes are particularly important during early project phases, such as Inception and Elaboration, because they provide aframework for organizing requirementsand discussions. By anchoring conversations around themes, analysts can ensure coverage of end-to-end processes and avoid missing critical functionality.

The other options do not serve this purpose. Application Guides (Option A) and Configuration Guides (Option C) are documentation artifacts, not mechanisms for identifying common processes. Backlog priorities (Option B) relate to Agile planning and do not describe product structure.

Understanding themes enables analysts to speak a common language with stakeholders and technical teams, ensuring that requirements align with Guidewire's product design and intended usage.
