- Online tools for preparation, such as searchable glossary and flashcards
- Practice tests
- Expert insight on best practices of AWS services
- Chapter-wise difficult questions for practice

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q226-Q231):

### NEW QUESTION # 226

A developer is creating a photo website. Amazon Route 53 hosts the website's domain. The developer wants to store the application code and images in an Amazon S3 bucket. The developer also wants to use Amazon CloudFront to deliver the images to users.

The developer has created the S3 bucket and a CloudFront distribution. The developer wants the images to be accessed only through the website's domain. Users must not use the S3 URLs.

Which solution will meet these requirements?

- A. Create a CloudFront origin access identity (OAI). Associate the OAI with the CloudFront distribution. Modify the S3 bucket policy to allow access from only the OAI. Update the Route 53 records to point the website domain to the CloudFront domain name.
- B. Create a CloudFront origin access identity (OAI). Associate the OAI with the CloudFront distribution. Modify the S3 bucket policy to allow access from only the OAI. Create an alias in Route 53 that points the website domain to the S3 bucket.
- C. Block public access in the S3 bucket policy. Configure CloudFront to use the S3 bucket endpoint. Create an alias in Route 53 that points the website domain to the S3 bucket.
- D. Block public access in the S3 bucket policy. Configure CloudFront to use the S3 bucket endpoint. Create an alias in Route 53 that points the website domain to the CloudFront domain name.

**Answer: B**

#### NEW QUESTION # 227

Regarding Amazon SWF, at times you might want to record information in the workflow history of a workflow execution that is specific to your use case. \_\_\_\_\_ enable you to record information in the workflow execution history that you can use for any custom or scenario-specific purpose.

- A. Tags
- B. Events
- **C. Markers**
- D. Hash keys

**Answer: C**

Explanation:

In Amazon SWF, at times you might want to record information in the workflow history of a workflow execution that is specific to your use case. Markers enable you to record information in the workflow execution history that you can use for any custom or scenario-specific purpose.

#### NEW QUESTION # 229

A developer is building an application that runs behind an application Load Balancer (ALB).  
The application is configured as the origin for an Amazon CloudFront distribution.  
Users will log in to the application using their social media accounts.  
How can the developer authenticate and authorize users?

- A. Configure the ALB to use Amazon Cognito as one of the authentication providers
- B. Authorize the users by calling the Amazon Cognito API in the AWS Lambda authorizer on the ALB
- **C. Configure Cloudfront to use Amazon Cognito as one of the authentication providers**
- D. Validate the user by inspecting the tokens using AWS Lambda authorizers on the ALB

**Answer: C**

#### NEW QUESTION # 230

An application takes longer than expected to process an Amazon SQS message.  
What should the developer do to the application so that other instances do not pick up the same message?

- A. Issue a DeleteMessage call to delete the message from the queue
- **B. Make a ReceiveMessage call to get the same message again from the queue**
- C. Use SendMessage to pass the message to the dead letter queue
- D. Send a ChangeMessageVisibility call to extend VisibilityTimeout

**Answer: B**
