## The best 220-1101 Test Questions Fee – The Latest Reliable Dumps Sheet for CompTIA 220-1101

Now, you should do need to get the exam question sets from year to year and reference materials that is related to CompTIA 220-1101 certification exam. Busying at work, you must not have enough time to prepare for your exam. So, it is very necessary for you to choose a high efficient reference material. What's more important, you should select a tool that suits you, which is a problem that is related to whether you can pass your exam successfully. Therefore, try RealExamFree CompTIA 220-1101 Practice Test dumps.

For those who are looking to start a career in the IT industry, the CompTIA 220-1101 exam is a great way to demonstrate their knowledge and skills to potential employers. CompTIA A+ Certification Exam: Core 1 certification is highly recognized in the industry and is often a requirement for entry-level IT positions. Additionally, the exam is also a great way for experienced IT professionals to refresh their knowledge and stay up-to-date with the latest technology trends. Passing the CompTIA 220-1101 Exam is a great achievement and can open up many opportunities for career advancement.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q525-Q530):

NEW QUESTION # 525
A user reports limited or no connectivity on a laptop. A technician runs ipconfig /all with the following result:

Which of the following is the MOST likely cause of this issue?

- A. DNS resolution

- B. DHCP failure
- C. Duplicate IP address
- D. ARP cache

Answer: B

NEW QUESTION # 526
Which of the following servers is used to collect data and information about events from a network-connected host?

- A. Print
- B. DNS
- C. Mail
- D. Syslog

Answer: D

Explanation:
The Syslog server collects logs and system messages from devices on a network. It's a standard protocol used to store log messages from network hardware like routers, switches, and servers for diagnostics and auditing.
* Option A (DNS): Translates domain names into IP addresses, not used for logging.
* Option B (Mail): Manages email communication.
* Option C (Print): Manages print jobs and printer sharing.
CompTIA A+ Core 1 Exam Objective Reference:
* Objective 2.4: Compare and contrast common networking hardware.

NEW QUESTION # 527
Which of the following wireless technologies would a company most likely implement for inventory management?

- A. NFC
- B. 5G
- C. RFID
- D. Bluetooth

Answer: C

Explanation:
Explanation
RFD stands for Radio Frequency Identification, which is a technology that uses radio waves to identify and track objects that have RFID tags attached to them. RFID tags are small devices that store information and can be read by RFID readers without direct contact or line of sight. RFID can be used for inventory management, as it can provide real-time visibility and accuracy of the location, quantity, and status of the items in a warehouse, store, or supply chain .

NEW QUESTION # 528
A user is unable to access the internet on a PC. A technician examines the PC and runs the following commands:
ipconfig /all
ping 8.8.8.8
ping comptia.org
Which of the following steps in the troubleshooting process does this series of commands represent?

- A. Establish a plan of action.
- B. Verify full system functionality.
- C. Identify the problem.
- D. Establish a theory.

Answer: C

Explanation:
The series of commands ipconfig /all, ping 8.8.8.8, and ping comptia.org represent the identify the problem step in the

troubleshooting process.

The ipconfig /all command displays all of the network configuration information for the PC. This can be used to check if the PC is correctly configured to access the internet, and to identify any potential problems.

The ping 8.8.8.8 and ping comptia.org commands send ping requests to the specified IP addresses. If the ping requests are successful, then this indicates that the PC can communicate with other devices on the internet. If the ping requests are unsuccessful, then this indicates that there is a problem with the PC's network connection.

The technician is using these commands to identify the cause of the user's internet connectivity problem. Once the technician has identified the problem, they can then develop a plan to fix it.

NEW QUESTION # 529

A user added a heater underneath a desk, and now an external monitor is not working. A technician verified the monitor gets power. Which of the following should the technician do next?

- A. Ensure a VGA cable is connected properly.
- B. Replace the monitor.
- C. Have the user unplug the heater.
- D. Open the display settings on the computer.

Answer: C

Explanation:

The next step that the technician should do is to have the user unplug the heater. This is because the heater may be causing electromagnetic interference (EMI) or radio frequency interference (RFI) that affects the signal transmission between the computer and the monitor. EMI and RFI are types of noise or distortion that can degrade the quality or integrity of data signals, especially in analog connections such as VGA. EMI and RFI can be generated by various sources, such as power lines, motors, fans, heaters, microwaves, radios, or cell phones. EMI and RFI can cause various symptoms on the monitor, such as flickering, ghosting, blurring, color shifting, or no display at all.

To troubleshoot EMI and RFI issues, the technician should follow these steps:

* Identify the source of the interference. In this case, the heater is the most likely culprit, as it was added recently and is located close to the monitor or the cable.

* Eliminate or reduce the interference. The technician should have the user unplug the heater or move it away from the monitor or the cable. The technician should also check if there are any other potential sources of interference nearby and remove or relocate them if possible.

* Test the monitor. The technician should verify if the monitor is working properly after unplugging or moving the heater. If the monitor is still not working, the technician should try other troubleshooting steps, such as checking the display settings on the computer, ensuring the VGA cable is connected properly, or replacing the monitor.
