## **New UiPath-ABAv1 Exam Simulator - UiPath New UiPath-ABAv1 Exam Question: UiPath Certified Professional Automation Business Analyst Professional v1.0 Pass Certainly**

Our UiPath-ABAv1 practice materials have picked out all knowledge points for you, which helps you get rid of many problems. In addition, time is money in modern society. It is important to achieve all things efficiently. So our UiPath-ABAv1 study guide just needs less time input, which can suit all people's demands. In the meantime, all knowledge points of our UiPath-ABAv1 Preparation questions have been adapted and compiled carefully to ensure that you absolutely can understand it quickly.

### **UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q144-Q149):**

#### **NEW QUESTION # 144**

What UiPath deployment model should a customer use if they would like a full-platform experience that is self-hosted in cloud or on-premises?

- A. Standalone
- **B. Automation Suite**
- C. Automation Platform
- D. Automation Cloud

**Answer: B**

Explanation:

For customers seeking a full-platform experience that can be self-hosted either in the cloud or on-premises, the UiPath Automation Suite is the recommended deployment model. This suite provides a comprehensive set of tools and services for enterprise automation, supporting complex and scalable RPA initiatives under the organization's control.

#### **NEW QUESTION # 145**

What does a Business Logic Translation Table do?

- A. Capture short video recordings
- B. Process activities detailed at key stroke level with respective screen shots captured
- C. Capture every action performed by the SME on the application layer
- **D. List the business rules and use them as reference in the As-Is process description**

**Answer: D**

Explanation:

A Business Logic Translation Table lists the business rules and uses them as a reference in the As-Is process description. This table is essential for translating complex business rules into understandable and actionable items that can be incorporated into the automated process, ensuring that all business requirements are met accurately. References: UiPath Documentation on Business Logic Translation at <https://docs.uipath.com/>.

#### **NEW QUESTION # 146**

What is the difference between a business exception and an application exception in UiPath Orchestrator?

- **A. A business exception is raised by the automation workflow while an application exception is raised by the underlying application being automated**
- B. A business exception is used to stop and restart a job while an application exception is used to terminate a job
- C. business exception is handled by the robot, while an application exception is handled by the Orchestrator
- D. A business exception is an expected and planned part of the process, while an application exception is an unexpected error or failure

**Answer: A**

Explanation:

Questions no: 56

In UiPath Orchestrator, a business exception refers to an error that arises due to the business logic or process rules not being met. It is an exception that is expected and can be planned for within the workflow. On the other hand, an application exception describes an error that is rooted in a technical issue, such as an application not responding or a system failure. This type of exception is unexpected and is related to the applications or systems that the robot interacts with.

References: The distinction between business exceptions and application exceptions is outlined in the UiPath Documentation Portal, specifically in the section "Business Exception Vs Application Exception" found at <https://docs.uipath.com/orchestrator/standalone/2023.10/user-guide/business-exception-vs-application-exception>

#### **NEW QUESTION # 147**

How can attended process execution be scheduled?

- **A. They cannot be scheduled but users can set reminders**
- B. Both from Assistant and Orchestrator
- C. Only from Assistant
- D. Only from Orchestrator

**Answer: A**

Explanation:

Attended process execution in UiPath cannot be scheduled in the same way as unattended processes. However, users can set reminders using the UiPath Assistant. While the Assistant allows for reminders to be set, it does not schedule the process to run automatically. The user must manually start the process after being reminded. This is in contrast to unattended processes, which can be scheduled to run automatically at specified times through the Orchestrator<sup>12</sup>.

#### **NEW QUESTION # 148**

What is the final step the business analyst must take to complete the Process Design Document?

- A. Validate the document with both the business owner and the development team
- B. Describe the As Is and the To Be
- **C. Get sign-off from the process owner**
- D. Create the test case scenarios
