

Valid Test Analytics-Admn-201 Braindumps & Analytics-Admn-201 Updated CBT

For candidates who are going to buy ADM-261 exam materials online, they may have the concern about the website safety. If you choose us, we will offer you a clean and safe online shopping environment. In addition, ADM-261 exam dumps are high quality and accuracy, and you can pass your exam just one time. We apply the international recognition third party for the payment, therefore your money safety can also be guaranteed. In order to let you access to the latest information, we offer you free update for 365 days after purchasing, and the update version will be sent to your email automatically.

Salesforce ADM-261: Service Cloud Administration Exam is an essential certification for professionals who are responsible for implementing and managing Service Cloud solutions. Passing ADM-261 exam demonstrates that the candidate has the skills and knowledge needed to effectively manage Service Cloud solutions. Certified professionals are in high demand and can expect to earn higher salaries than their non-certified counterparts.

New ADM-261 Test Braindumps | Valid ADM-261 Valid Test Review: Service Cloud Administration 100% Pass

Choosing our ADM-261 real dumps as your study guide means you choose a smart and fast way to get succeed in the certification exam. There are accurate ADM-261 test answers and some explanations along with the exam questions that will boost your confidence to solve the difficulty of [ADM-261 Practice Test](#). You will enjoy great benefits if you buy our ADM-261 braindumps now and free update your study materials one-year.

ADM-261 Test Braindumps & ADM-261 Valid Test Review

What's more, part of that ExamsLabs Analytics-Admn-201 dumps now are free: <https://drive.google.com/open?id=1Rnr9P9dSv32ey4vV4icksI0jppyZyaY7n>

We have a bold idea that we will definitely introduce our Analytics-Admn-201 study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our Analytics-Admn-201 practice questions, therefore, is bound to help you pass though the Analytics-Admn-201 Exam and win a better future. We will also continuously keep a pioneering spirit and are willing to tackle any project that comes your way. Our Analytics-Admn-201 training materials will never let you down for its wonderful quality.

Salesforce Analytics-Admn-201 Exam Overview:

Certification Vendor:	Salesforce
Exam Name:	Salesforce Certified Tableau Server Administrator
Exam Number:	ANALYTICS-ADMIN-201
Available Languages:	English
Exam Format:	Multiple-choice, Multiple-select
Exam Duration:	90 minutes

Passing Score: 65%
 Related Certifications: Salesforce Certified Administrator
 Exam Price: \$200 USD
 Real Exam Qty: 60
 Sample Questions: Salesforce Analytics-Admn-201 Sample Questions
 Exam Way: Online proctored or test center
 Pre Condition: Experience with Tableau Server and system administration recommended
 Official Syllabus URL: <https://trailhead.salesforce.com/en/credentials/analyticsadministrator>

Pass Guaranteed Quiz Useful Salesforce - Analytics-Admn-201 - Valid Test Salesforce Certified Tableau Server Administrator Braindumps

The Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) product can be easily accessed just after purchasing it from ExamsLabs. You can receive free Sitecore Dumps updates for up to 1 year after buying material. The 24/7 support system is also available for you, which helps you every time you get stuck somewhere. Many students have studied from the ExamsLabs Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) practice material and rated it positively because they have passed the Salesforce Certified Tableau Server Administrator (Analytics-Admn-201) certification exam on the first try.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.
Topic 2	Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 3	Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 4	Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 5	Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Salesforce Certified Tableau Server Administrator Sample Questions (Q58-Q63):

NEW QUESTION # 58

What statement correctly describes locking permissions to a project?

- **A. You can lock permissions to a project by changing Customizable to Locked**
- B. You can lock permissions to a project by setting the appropriate Project permission role
- C. Locking permissions to projects must be enabled on the Tableau Server Settings page
- D. Content permissions are locked to a project by default

Answer: A

Explanation:

In Tableau Server, projects organize content (workbooks, data sources) and use permissions to control access. "Locking permissions" restricts how permissions are managed within a project-- let's explore this exhaustively:

Permission Management Modes:

Managed by Owner: Default mode. Content owners (e.g., workbook publishers) can set permissions on their items, inheriting project defaults as a starting point. Locked to the Project:

Project-level permissions are enforced, and content owners cannot modify them. This ensures consistency across all items in the project.

How to Lock:

In the Tableau Server web UI:

Go to Content > Projects.

Select a project, click Actions > Permissions.

In the Permissions dialog, change Permissions Management from "Customizable" (Managed by Owner) to "Locked." Set the desired permissions (e.g., Viewer, Editor) for users/groups, which then apply uniformly to all content.

Via REST API: Use the updateProject endpoint with "permissionsLocked": true.

Option B (You can lock permissions to a project by changing Customizable to Locked): Correct.

Details: This is the precise action in the UI--switching from "Customizable" to "Locked" locks permissions at the project level.

Impact: Owners lose the ability to override permissions on individual workbooks/data sources, enforcing governance.

Example: Set "All Users" to Viewer (Locked)--all content in the project is view-only, regardless of owner intent.

NEW QUESTION # 59

What should you do to configure the view URL and enable recording for a site that has recording workbook performance metrics enabled?

- A. Click the Performance link in the toolbar at the top of the view
- B. Delete the session ID in the URL and reload the view
- C. Type :record_performance=yes& at the end of the view URL, immediately before the session ID
- **D. Type :record_performance=yes& at the end of the view URL, immediately after the session ID**

Answer: D

Explanation:

Tableau Server can record performance metrics for workbooks to troubleshoot slow-loading views. This feature must be enabled at the site level (via Settings > General > Allow Performance Recording). Once enabled, you can trigger recording for a specific view by modifying its URL.

The correct syntax is to append :record_performance=yes& to the view URL, immediately after the session ID. For example:

* Original

URL: http://server/###site/my-site/views/workbook/view?.iid=1

* Modified

URL: http://server/###site/my-site/views/workbook/view?.iid=1:record_performance=yes

&

After loading the view with this parameter, a performance recording is generated and accessible via the Performance option in the toolbar.

* Option B (Type :record_performance=yes& at the end of the view URL, immediately after the session ID): Correct. This follows Tableau's documented method for enabling performance recording.

* Option A (Click the Performance link in the toolbar): Incorrect. The Performance link appears only after recording is triggered via the URL; it's not the method to enable it.

* Option C (Type :record_performance=yes& immediately before the session ID): Incorrect. The parameter must follow the session ID (e.g., ;iid=1) to function correctly.

* Option D (Delete the session ID in the URL and reload the view): Incorrect. The session ID is required for the view to load properly; removing it breaks the URL.

Reference: Tableau Server Documentation - "Record Performance of a View" (https://help.tableau.com/current/server/en-us/perf_record.htm).

NEW QUESTION # 60

To which site role can you associate the Viewer user-based license level?

- **A. Viewer**
- B. Explorer (can publish)
- C. Explorer
- D. Creator

Answer: A

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

NEW QUESTION # 61

What is the maximum number of tasks that a single Backgrounder process can execute simultaneously?

- A. Unlimited (based on server resources)
- **B. One**
- C. Three
- D. Two

Answer: B

Explanation:

The Backgrounder process in Tableau Server handles tasks like extract refreshes and subscriptions-let's explore its concurrency:

* Backgrounder Behavior:

* Each instance is single-threaded for task execution-one task at a time per Backgrounder.

* Multiple Backgrounders (e.g., in multi-node setups) increase parallelism, but a single Backgrounder is limited to 1 concurrent task.

* Queue: Additional tasks wait in the queue, prioritized by their priority (1-100).

* Option A (One): Correct.

* Details: A single Backgrounder executes one task (e.g., an extract refresh) until completion before starting the next.

* Config: Add more Backgrounders via TSM (tsm topology set-process -n node1 -pr backgrounder

-c 2) for more concurrency.

* Option B (Two): Incorrect.

* Why: Not natively supported-a single Backgrounder doesn't multi-thread tasks.

* Option C (Three): Incorrect.

* Why: Exceeds the single-threaded design.

* Option D (Unlimited): Incorrect.

* Why: Concurrency is fixed at 1 per instance-resources affect queue processing speed, not simultaneous tasks.

Why This Matters: Understanding Backgrounder limits guides scaling-more instances mean more parallel tasks, critical for heavy workloads.

Reference: Tableau Server Documentation - "Backgrounder Process" (<https://help.tableau.com/current/server/en-us/processes.htm#backgrounder>).

NEW QUESTION # 62

What two events must occur for Tableau Server to recompute queries for a workbook cache after a scheduled refresh? (Choose two.)

- A. The workbook was published in the last month
- B. The All Users group has a permission rule allowing access to the workbook
- C. The workbook has upcoming scheduled refresh tasks
- D. The workbook has been viewed recently

Answer: C,D

Explanation:

Tableau Server uses caching to speed up workbook loading by storing query results. After a scheduled extract refresh updates the data, the cache may need recomputing-let's dive into the mechanics:

* Caching Basics:

* VizQL Cache: Stores rendered views and query results for faster access.

* Refresh Trigger: A scheduled refresh updates the underlying extract (.hyper), but the cache isn't automatically invalidated-it's demand-driven.

* Recompute Conditions: Tableau recomputes the cache when the workbook is accessed (viewed) and its data has changed (e.g., via refresh).

* Evaluation:

* Option B (The workbook has upcoming scheduled refresh tasks): Correct.

* Why: An upcoming refresh task indicates the workbook relies on an extract with a schedule. After the refresh runs, the data changes, priming the cache for recomputation on next view. Without a schedule, no refresh occurs, so this is a prerequisite.

* Detail: Schedules are set in Schedules > Tasks-e.g., "Daily at 2 AM."

* Option D (The workbook has been viewed recently): Correct.

* Why: Viewing triggers cache recomputation if the data has changed (e.g., post-refresh).

Tableau uses a "lazy caching" model-cache updates only when a user loads the workbook, ensuring fresh results.

* Detail: "Recently" isn't strictly defined but implies post-refresh access.

* Option A (Published in the last month): Incorrect.

* Why: Publish date is irrelevant-cache recomputation ties to data changes and access, not publication timing.

* Option C (All Users group has permission rule allowing access): Incorrect.

* Why: Permissions enable viewing, but recomputation requires actual access (viewing) and a refresh event, not just potential access.

Why This Matters: Caching balances performance and freshness-understanding triggers prevents stale data surprises.

Reference: Tableau Server Documentation - "Caching and Performance" (https://help.tableau.com/current/server/en-us/perf_cache.htm).
