1z0-1057-25 試験問題 (Q65-Q70):

質問 # 65

Which two statements are true about the borrowed and lent cross charge method? (Choose two.)

- A. You must set up a contract business unit to use this method.
- B. Internal Invoice is not generated with this method.
- C. This method allows you to process cross charge transactions across legal entities.
- D. This method creates accounting entries that move an amount equal to the transfer price between the provider and receiver organizations

正解: B、C

解説:

The borrowed and lent cross charge method is a method that allows you to process cross charge transactions between provider and receiver organizations that belong to different legal entities within the same primary ledger. This method does not generate internal invoices or intercompany accounting entries for cross charge transactions. Instead, this method creates accounting entries that move an amount equal to the transfer price between the provider and receiver organizations using borrowed and lent accounts. Two statements that are true about this method are:

- * Internal Invoice is not generated with this method. This method does not create internal invoices for cross charge transactions, as these transactions are accounted within the same primary ledger using borrowed and lent accounts.
- * This method allows you to process cross charge transactions across legal entities. This method allows you to process cross charge transactions between provider and receiver organizations that belong to different legal entities within the same primary ledger, as long as they share the same chart of accounts, calendar, currency, and subledger accounting method.

質問 # 66

You have projects and tasks defined with transaction controls, which does not allow certain types of charges to the project. Your business needs to create invoices in AP with this project every period and hence would like to make the process easier by creating a distribution set. As you create the distribution set, you notice that these distribution set lines are not validated against the project transaction controls and you are allowed to save it without any validation errors. Identify the reason why the project transaction controls are not applied. (Choose the best answer.)

- A. There is no expenditure item date information available on the distribution set line.
- B. There is no expenditure type information available on the distribution set line.
- C. There is no expenditure organization information available on the distribution set line.
- D. The account code combination is not available on the distribution set line.

正解: A

解説:

Ref: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/18c/oapfm/project-costing-configuration-define-project-costing-integrations.html#OAPFM174886> How can I validate distribution sets for projects information?

Oracle Fusion Projects performs validations on Oracle Fusion Payables distribution sets for payables invoices at the time you create the actual distribution set lines. It validates the project and task number during the invoice validation.

Distribution sets are typically used on recurring transactions, and the associated project does not have transaction controls. When you create a distribution set in Oracle Fusion Payables, the distribution set line is not validated against the project transaction controls in Oracle Fusion Projects because you do not enter an expenditure item date, which is required for transaction control validation. The expenditure item date is not provided because you use the distribution sets for an indefinite period of time.

質問 # 67

Your organization has a requirement to send notifications to the owners of the associated tasks when the status of a deliverable is set to Complete. You have been asked to evaluate generate public events for project deliverable status changes feature to manage this requirement.

Which two statements are true about this feature? (Choose two.)

- A. The public event is generated when the progress status for a deliverable changes.
- B. The public event is generated when a deliverable is created or deleted.
- C. The public event is not generated when a deliverable is created or deleted.
- D. The public event is not generated when the priority of a deliverable changes.

正解: A、C

解説:

The generate public events for project deliverable status changes feature is a feature that allows you to send notifications or trigger actions when the progress status of a deliverable changes from one value to another.

For example, when the status of a deliverable is set to Complete, you can send a notification to the owners of the associated tasks or update the status of the tasks accordingly. Two statements that are true about this feature are:

* The public event is not generated when a deliverable is created or deleted. This feature only generates events when the progress status of a deliverable changes, not when a deliverable is added or removed from a project or task.

* The public event is generated when the progress status for a deliverable changes. This feature generates events when the progress status of a deliverable changes from one value to another, such as from Not Started to In Progress, or from In Progress to Complete. You can define rules and actions for each progress status change using Business Process Management (BPM) Worklist. The public event is also not generated when the priority of a deliverable changes, as this feature only generates events when the progress status of a deliverable changes. 質問 # 68

Your client has decided to import time cards into Project Costing from Oracle Fusion Time and Labor. They have a requirement to make adjustments to time card entries whenever needed.

In which work area will the employees and contingent workers be able to modify their time cards?

- A. Time
- B. Both Time and Cost
- C. Asset
- D. Cost

正解: A

解説:

The employees and contingent workers will be able to modify their time cards in the Time work area. This work area allows them to enter, review, edit, and submit their time cards for approval. They can also view the status and history of their time cards and make corrections as needed. The Time and Cost work area allows the project managers and cost accountants to review, adjust, and transfer time card transactions to projects and tasks. The Asset work area allows the asset managers and cost accountants to review, adjust, and transfer asset transactions to Oracle Fusion Assets. These work areas are not used by the employees and contingent workers to modify their time cards. Reference: <https://docs.oracle.com/en/cloud/saas/project-portfolio-management/20c/oapfm/manage-project-time-and-labor.html#OAPFM2356221>

質問 # 69

You are managing a project based on a Waterfall model. You define a project and a project plan in Oracle Project Management with tasks and subtasks applicable to each of the phases of the project: Initiation, Discovery, Design, Build, Test, and Deploy. As a project manager, you want to define deliverables for your project requirements that are elucidated during the Discovery phase of your project. You now want to understand how the inheritance between requirements, tasks, and deliverables works.

Which two are correct statements in this scenario? (Choose two.)

- A. A deliverable associated with a requirement is not automatically associated with the tasks created for that requirement.
- B. You associate a deliverable with a task independent of associating a requirement with a task.
- C. The association of a deliverable with a task is dependent on associating a requirement with a task.
- D. A deliverable associated with a requirement is automatically associated with the tasks created for that requirement.

正解: A、B

解説:

According to Oracle sources¹, the inheritance between requirements, tasks, and deliverables works as follows:

* You can associate a deliverable with a task independent of associating a requirement with a task. You can also associate a deliverable with a requirement independent of associating a task with a requirement

1.

* A deliverable associated with a requirement is not automatically associated with the tasks created for that requirement. You must manually associate the deliverable with the tasks that produce it¹.

Therefore, the correct answer is B and D.

1: Can deliverables for projects and tasks be inherited from associated requirements? - docs.oracle.com (index 1)

In Oracle Project Management, you can define requirements, tasks, and deliverables for your project based on your project methodology and lifecycle. Requirements are statements of needs or expectations that must be met by the project outcome. Tasks are units of work that must be performed to complete the project.

Deliverables are products or services that are produced or provided as part of a task or requirement. Two correct statements about how the inheritance between requirements, tasks, and deliverables works are:

* You associate a deliverable with a task independent of associating a requirement with a task. This means that you can create a deliverable for a task regardless of whether the task is linked to a requirement or not.

* A deliverable associated with a requirement is not automatically associated with the tasks created for that requirement. This means that you have to manually associate a deliverable with a task even if both the deliverable and the task are linked to the same requirement.

質問 # 70

.....

効果的な勤勉さが結果に正比例することは誰もが知っているので、長年の勤勉な作業によって、専門家は頻繁にテストされた知識を参考のために1z0-1057-25実践資料に集めました。したがって、1z0-1057-25トレーニング資料は、彼らの努力の成果です。1z0-1057-25の実践教材を使用することで、以前に想像していた以上の成果を絶対に得ることができます。1z0-1057-25の実際のテストを選択した顧客から収集された明確なデータがあり、合格率は98~100%です。したがって、成功を収めるチャンスは、当社の資料によって大幅に向上します。
