

NSE8_812 Study Material - Reliable NSE8_812 Test Voucher

What's more, part of that ActualTestsQuiz NSE8_812 dumps now are free: https://drive.google.com/open?id=1rGFStxuhWCDeoQf4zUY1LznQ_yuAmZbX

Our experts have the best experience of developing and compiling the content and the displays of the NSE8_812 exam questions. Hence, they have created three different versions of the NSE8_812 study guide for you to choose: the PDF, Software and APP online which offered by us to provide you practice at any time and condition. All these three versions of our NSE8_812 Training Materials contain the best information you require to prepare and pass the exam. Don't hesitate, our NSE8_812 practice engine won't let you down!

You may think choosing NSE8_812 practice materials at the first time is a little bit like taking gambles. However, you can be assured by our NSE8_812 learning quiz with free demos to take reference, and professional elites as your backup. They are a bunch of censorious elites who do not compromise on any errors happened on our NSE8_812 Training Materials. So their accuracy rate is unbelievably high and helped over 98 percent of exam candidates pass the NSE8_812 exam.

Reliable NSE8_812 Test Voucher - NSE8_812 Accurate Test

All smart devices are suitable to use Fortinet NSE 8 - Written Exam (NSE8_812) pdf dumps of ActualTestsQuiz. Therefore, you can open this Fortinet NSE 8 - Written Exam (NSE8_812) real dumps document and study for the Fortinet NSE8_812 test at any time from your comfort zone. These Fortinet NSE8_812 are updated, and ActualTestsQuiz regularly amends the content as per new changes in the Fortinet NSE8_812 real certification test.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q28-Q33):

NEW QUESTION # 28

Refer to the exhibits.

A FortiGate cluster (CL-1) protects a data center hosting multiple web applications. A pair of FortiADC devices are already configured for SSL decryption (FAD-1), and re-encryption (FAD-2). CL-1 must accept unencrypted traffic from FAD-1, perform application detection on the plain-text traffic, and forward the inspected traffic to FAD-2.

The SSL-Offload-App-Detect application list and SSL-Offload protocol options profile are applied to the firewall policy handling the web application traffic on CL-1.

Given this scenario, which two configuration tasks must the administrator perform on CL-1? (Choose two.) A)

B)

- A. Option A
- B. Option D
- C. Option C
- D. Option B

Answer: C,D

Explanation:

To enable application detection on plain-text traffic that has been decrypted by FortiADC, the administrator must perform two configuration tasks on CL-1:

Enable SSL offloading in the firewall policy and select the SSL-Offload protocol options profile.

Enable application control in the firewall policy and select the SSL-Offload-App-Detect application list. Reference: <https://docs.fortinet.com/document/fortigate/6.4.0/cookbook/103438/application-detection-on-ssl-offloaded-traffic>

NEW QUESTION # 29

Refer to the exhibit showing a firewall policy configuration.

To prevent unauthorized access of their cloud assets, an administrator wants to enforce authentication on firewall policy ID 1. What change does the administrator need to make?

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: D

Explanation:

<https://docs.fortinet.com/document/fortigate/6.2.0/new-features/238665/authentication-policy-extensions>

NEW QUESTION # 30

Refer to the exhibit showing a firewall policy configuration.

To prevent unauthorized access of their cloud assets, an administrator wants to enforce authentication on firewall policy ID 1. What change does the administrator need to make?

- A.
- B.
- C.
- D.

Answer: A

Explanation:

The firewall policy in the exhibit allows all traffic from the internal network to the cloud. To enforce authentication on this traffic, the administrator needs to add the auth-on-demand option to the policy. This option will force all users to authenticate before they are allowed to access the cloud.

The following is the correct configuration:

```
config firewall policy
edit 1
set srcintf "internal"
set dstintf "wan1"
set srcaddr "all"
set dstaddr "all"
set service "all"
set action accept
set auth-on-demand enable
```

NEW QUESTION # 31

Refer to the exhibit.

A customer has deployed a FortiGate 300E with virtual domains (VDMs) enabled in the multi-VDM mode. There are three VDMs: Root is for management and internet access, while VDM 1 and VDM 2 are used for segregating internal traffic. AccountVlnk and SalesVlnk are standard VDM links in Ethernet mode.

Given the exhibit, which two statements below about VDM behavior are correct? (Choose two.)

- A. Traffic on AccountVlnk and SalesVlnk will not be accelerated.
- B. You can apply OSPF routing on the VDM link in either PPP or Ethernet mode
- C. OSPF routing can be configured between VDM 1 and Root VDM without any configuration changes to AccountVlnk
- D. The VDM links are in Ethernet mode because they have IP addressed assigned on both sides.
- E. Root VDM is an Admin type VDM, while VDM 1 and VDM 2 are Traffic type VDMs.

Answer: A,E

Explanation:

The FortiGate configuration shown in the exhibit is using virtual domains (VDMs) enabled in multi-VDM mode. There are three VDMs: Root is for management and internet access, while VDM 1 and VDM 2 are used for segregating internal traffic.

AccountVlnk and SalesVlnk are standard VDM links in Ethernet mode. One correct statement about VDM behavior is that

traffic on AccountVlnk and SalesVlnk will not be accelerated. This is because standard VDM links do not support hardware acceleration features such as NP6 or CP9 offloading, which can improve performance and throughput for traffic between VDMs.

To enable hardware acceleration for inter-VDM traffic, non-standard VDM links such as NP6 or CP9 interfaces should be

used instead of standard VDM links. Another correct statement about VDM behavior is that Root VDM is an Admin type VDM, while VDM 1 and VDM 2 are Traffic type VDMs. This is because Admin type VDMs are special VDMs that

can only be used for management purposes and cannot process any traffic other than management traffic (such as SSH, HTTPS, SNMP, etc.). Traffic type VDMs are normal VDMs that can process any kind of traffic (such as firewall policies, VPN tunnels,

routing protocols, etc.). By default, Root VDM is an Admin type VDM that can manage other Traffic type VDMs, unless it is converted to a Traffic type VDM by using the set vdom-admin enable command. Reference:

<https://docs.fortinet.com/document/fortigate/7.0.0/administration-guide/19662/virtual-domains>

<https://docs.fortinet.com/document/fortigate/7.0.0/hardware-acceleration-guide/19662/vdom-links>

NEW QUESTION # 32

You must analyze an event that happened at 20:37 UTC. One log relevant to the event is extracted from FortiGate logs:

The devices and the administrator are all located in different time zones Daylight savings time (DST) is disabled

* The FortiGate is at GMT-1000.

* The FortiAnalyzer is at GMT-0800

* Your browser local time zone is at GMT-03.00

You want to review this log on FortiAnalyzer GUI, what time should you use as a filter?

- A. 17:37:08
- B. 10:37:08
- C. 20:37:08
- D. 12.37:08

Answer: A

Explanation:

To review this log on FortiAnalyzer GUI, the administrator should use the time filter that matches the local time zone of FortiAnalyzer, which is GMT-0800. Since the log was generated at 20:37 UTC (GMT+0000), the corresponding time in GMT-

0800 is 20:37 - 8 hours = 12:37. However, since DST is disabled on FortiAnalyzer, the administrator should add one hour to account for daylight saving time difference, resulting in 12:37 + 1 hour = 13:37. Therefore, the time filter to use is 13:37:08.
