

# Test SC-300 Tutorials - SC-300 Reliable Study Notes

Microsoft SC-300 Microsoft Identity and Access Administrator 1

## SC-300 Reliable Mock Test & Latest SC-300 Exam Tips

DOWNLOAD the newest 2Pass4sure SC-300 PDF dumps from Cloud Storage for free: [https://drive.google.com/open?id=1WIRBpExmPYCjMCeMPuJf0T\\_VPG8hH59](https://drive.google.com/open?id=1WIRBpExmPYCjMCeMPuJf0T_VPG8hH59)

Our SC-300 guide torrent through the analysis of each subject research, found that there are a lot of hidden rules worth exploring, this is very necessary, at the same time, our SC-300 training materials have a super dream team of experts, so you can strictly control the proposition trend every year. In the annual examination questions, our SC-300 study questions have the corresponding rules to summarize, and can accurately predict this year's test hot spot and the proposition direction. This allows the user to prepare for the test full of confidence.

Microsoft SC-300 Exam is ideal for IT professionals who are responsible for managing identity and access solutions in organizations of all sizes. This includes IT administrators, security analysts, and identity and access managers who are responsible for designing, implementing, and maintaining identity and access solutions based on Microsoft technologies. SC-300 exam is also recommended for individuals who are looking to advance their careers in the field of identity and access management, as it is a globally recognized certification that validates their expertise and knowledge in this area. With the increasing importance of identity and access management in today's digital world, passing the Microsoft SC-300 Exam is a valuable achievement that can open up new career opportunities for IT professionals.

### Why is the Microsoft SC-300 Certification Exam difficult to write?

Microsoft SC-300 exam is a challenging exam. To get a high score, you must be prepared for the exam. You must ensure that you have sufficient knowledge of the exam subjects. **Microsoft SC-300 Dumps** helps you prepare for this exam by providing practice test questions for the exam. Practice

SC-300 Reliable Mock Test & Latest SC-300 Exam Tips

BONUS!!! Download part of Free4Dump SC-300 dumps for free: [https://drive.google.com/open?id=1AqqF9F-bMe4dqFT\\_9-fERYVWoVK83z9](https://drive.google.com/open?id=1AqqF9F-bMe4dqFT_9-fERYVWoVK83z9)

If you don't have enough ability, it is very possible for you to be washed out. On the contrary, the combination of experience and the SC-300 certification could help you resume stand out in a competitive job market. However, how can you get the SC-300 certification successfully in the shortest time? We also know you can't spend your all time on preparing for your exam, so it is very difficult for you to get the certification in a short time. Don't worry; SC-300 question torrent is willing to help you solve your problem. We have compiled such a SC-300 guide torrents that can help you pass the exam easily, it has higher pass rate and higher quality than other study materials. So, are you ready? Buy our SC-300 guide questions; it will not let you down.

Earning the Microsoft SC-300 certification is a valuable credential for IT professionals who want to advance their career in cloud-based identity and access management. Microsoft Identity and Access Administrator certification demonstrates that the candidate has the skills and knowledge necessary to design, implement, and manage identity and access solutions in Microsoft Azure. Additionally, Microsoft Certified Identity and Access Administrators are in high demand as organizations increasingly rely on cloud-based identity and access solutions to secure their digital assets.

Microsoft SC-300 Exam is intended for individuals who work in roles such as Identity and Access Administrator, Security Administrator, Cloud Administrator, or Enterprise Administrator. Microsoft Identity and Access Administrator certification is highly valued by employers and can help professionals advance their careers in the field of identity and access management.

## Free PDF 2026 Microsoft SC-300: Microsoft Identity and Access Administrator –Professional Test Tutorials

At Free4Dump, we understand the importance of flexibility and convenience in the learning experience. That's why we've designed our product to provide students with real Microsoft SC-300 questions they need to succeed, while also giving them the flexibility and convenience they need to fit their studies into their busy schedules. Free demos and up to 1 year of free practice material updates are also available at Free4Dump. Buy today and start your journey with actual Microsoft Identity and Access Administrator (SC-300) exam dumps.

### Microsoft Identity and Access Administrator Sample Questions (Q277-Q282):

#### NEW QUESTION # 277

Hotspot Question

You have an Azure subscription that is linked to a Microsoft Entra tenant. The tenant contains three users named User1, User2 and User3.

You have the devices shown in the following table.

Name	Platform	Description
Device1	Windows 11	Microsoft Entra joined
Device2	Windows 11	None
Device3	Android	Microsoft Entra registered

You deploy a virtual machine that has the following configurations:

- Name: VM1
- Resource group: RG1
- Operating system: Windows Server
- Login with Microsoft Entra ID: Enabled

You have the Azure role assignments shown in the following table.

User	Role	Scope
User1	Virtual Machine Local User Login	RG1
User2	Virtual Machine User Login	RG1
User3	Virtual Machine Administrator Login	Sub1

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

#### Answer Area

Statements	Yes	No
User1 can sign in to VM1 from Device1 by using their Microsoft Entra credentials.	<input type="radio"/>	<input type="radio"/>
User2 can sign in to VM1 from Device2 by using their Microsoft Entra credentials.	<input type="radio"/>	<input type="radio"/>
User3 can sign in to VM1 from Device3 by using their Microsoft Entra credentials.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
User1 can sign in to VM1 from Device1 by using their Microsoft Entra credentials.	<input type="radio"/>	<input checked="" type="radio"/>
User2 can sign in to VM1 from Device2 by using their Microsoft Entra credentials.	<input type="radio"/>	<input type="radio"/>
User3 can sign in to VM1 from Device3 by using their Microsoft Entra credentials.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Box 1: No

User1 has the Virtual Machine Local User login role with scope RG1.

The role is not correct.

The Virtual Machine User Login role would be OK.

Box 2: Yes

User2 has a correct role: The Virtual Machine User Login role.

The Device is Windows 11, which is fine.

The Device does not have to be Entra joined or Entra registered.

Box 3: No

Not possible from an Android device.

Note:

Enable Microsoft Entra login for a Windows VM in Azure

To use Microsoft Entra login for a Windows VM in Azure, you must:

1. Enable the Microsoft Entra login option for the VM. [we can assume this has been configured]
2. Configure Azure role assignments for users who are authorized to sign in to the VM.

Reference:

<https://learn.microsoft.com/en-us/entra/identity/devices/howto-vm-sign-in-azure-ad-windows>

<https://learn.microsoft.com/en-us/azure/virtual-desktop/azure-ad-joined-session-hosts>

### NEW QUESTION # 278

You have an Azure Active Directory (Azure AD) tenant that syncs to an Active Directory forest. The tenant uses through authentication.

A corporate security policy states the following:

Domain controllers must never communicate directly to the internet.

Only required software must be installed on servers.

The Active Directory domain contains the on-premises servers shown in the following table.

Name	Description
Server1	Domain controller (PDC emulator)
Server2	Domain controller (infrastructure master)
Server3	Azure AD Connect server
Server4	Unassigned member server

You need to ensure that users can authenticate to Azure AD if a server fails.

On which server should you install an additional pass-through authentication agent?

- A. Server2
- **B. Server4**
- C. Server1
- D. Server3

**Answer: B**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-quick-start>

### NEW QUESTION # 279

You have a Microsoft 365 tenant.

The Azure Active Directory (Azure AD) tenant contains the groups shown in the following table.

Name	Type
Group1	Security
Group2	Distribution
Group3	Microsoft 365
Group4	Mail-enabled security

In Azure AD, you add a new enterprise application named App1. Which groups can you assign to App1?

- A. Group1 only
- **B. Group3 only**
- C. Group1 and Group2 only
- D. Group2 only

- E. Group1 and Group4

**Answer: B**

### NEW QUESTION # 280

You have an Azure AD tenant that contains a user named User1. User1 is assigned the User Administrator role.

You need to configure External collaboration settings for the tenant to meet the following requirements:

\*Guest users must be prevented from querying staff email addresses.

\*Guest users must be able to access the tenant only if they are invited by User1.

Which three settings should you configure? To answer, select the appropriate settings in the answer area.

Guest user access restrictions:

- Guest users have the same access as members (most inclusive)
- Guest users have limited access to properties and memberships of directory objects
- Guest user access is restricted to properties and memberships of their own directory objects (most restrictive)

Guest invite restrictions:

- Anyone in the organization can invite guest users including guests and non-admins (most inclusive)
- Member users and users assigned to specific admin roles can invite guest users including guests with member permissions
- Only users assigned to specific admin roles can invite guest users
- No one in the organization can invite guest users including admins (most restrictive)

Enable guest self-service sign up via user flows:

No

Yes

**Answer:**

**Explanation:**

Guest user access restrictions:

- Guest users have the same access as members (most inclusive)
- Guest users have limited access to properties and memberships of directory objects
- Guest user access is restricted to properties and memberships of their own directory objects (most restrictive)

Guest invite restrictions:

- Anyone in the organization can invite guest users including guests and non-admins (most inclusive)
- Member users and users assigned to specific admin roles can invite guest users including guests with member permissions
- Only users assigned to specific admin roles can invite guest users
- No one in the organization can invite guest users including admins (most restrictive)

Enable guest self-service sign up via user flows:

No

Yes

**Explanation**

Box1 = User access is restricted to properties and memberships of their own directory objects (most restrictive). This setting ensures that guest users are prevented from querying staff email addresses and can access the tenant only if they are invited by User1.

Box2 = Only users assigned to specific admin roles can invite guest users. This setting ensures that guest users can access the tenant only if they are invited by User1.

Box3 = This setting enables guest users to sign up for the tenant only if they are invited by User1.

### NEW QUESTION # 281

You have a Microsoft 365 E5 tenant.

You purchase a cloud app named App1.

You need to enable real-time session-level monitoring of App1 by using Microsoft Defender for Cloud Apps.

In which order should you perform the actions? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
<ul style="list-style-type: none"> <li>Register App1 in Microsoft Entra ID.</li> </ul>	
<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.</li> </ul>	
<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, create a session policy.</li> </ul>	
<ul style="list-style-type: none"> <li>Create a conditional access policy that has session controls configured.</li> </ul>	

Microsoft

**Answer:**

**Explanation:**

Actions	Answer Area
<ul style="list-style-type: none"> <li>Register App1 in Microsoft Entra ID.</li> </ul>	<ul style="list-style-type: none"> <li>Register App1 in Microsoft Entra ID.</li> </ul>
<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.</li> </ul>	<ul style="list-style-type: none"> <li>Create a conditional access policy that has session controls configured.</li> </ul>
<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, create a session policy.</li> </ul>	<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.</li> </ul>
<ul style="list-style-type: none"> <li>Create a conditional access policy that has session controls configured.</li> </ul>	<ul style="list-style-type: none"> <li>From Microsoft Defender for Cloud Apps, create a session policy.</li> </ul>

Microsoft

**Explanation:**

Register App1 in Microsoft Entra ID.

Create a conditional access policy that has session controls configured.

From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.

From Microsoft Defender for Cloud Apps, create a session policy.

Let's break this down step by step based on Microsoft Defender for Cloud Apps (MDCA) and Microsoft Entra ID integration for enabling real-time session-level monitoring, as outlined in Microsoft Identity and Access Administrator documentation.

**Understanding the Goal: Real-Time Session-Level Monitoring with Microsoft Defender for Cloud Apps:**

Microsoft Defender for Cloud Apps (MDCA) is a Cloud Access Security Broker (CASB) solution that provides visibility, control, and threat protection for cloud applications.

Real-time session-level monitoring allows MDCA to inspect and control user activities within a cloud app (App1 in this case) during active sessions. This requires integration with Microsoft Entra ID and the use of Conditional Access policies to route sessions through MDCA for monitoring.

The Microsoft 365 E5 tenant includes licenses for Microsoft Entra ID P2 and Microsoft Defender for Cloud Apps, which are necessary for this functionality.

**Step-by-Step Analysis of the Actions:** To enable real-time session-level monitoring, the actions must be performed in a logical order that aligns with Microsoft's recommended workflow for integrating a cloud app with MDCA.

**Step 1: Register App1 in Microsoft Entra ID.**

Before App1 can be monitored by MDCA, it must be registered as an application in Microsoft Entra ID. This step involves adding App1 to the tenant's enterprise applications, which allows Microsoft Entra ID to manage authentication and authorization for the app.

Registering the app in Microsoft Entra ID enables single sign-on (SSO) and allows the app to be governed by Conditional Access policies, which is a prerequisite for session-level monitoring.

This is the first step because none of the other actions can proceed without App1 being recognized by Microsoft Entra ID.

**Step 2: Create a conditional access policy that has session controls configured.**

Microsoft Defender for Cloud Apps integrates with Microsoft Entra ID Conditional Access to enforce session-level monitoring. A Conditional Access policy must be created to target App1 and include session controls that route user sessions through MDCA. In the Conditional Access policy, under "Session" controls, you enable the option "Use Conditional Access App Control," which integrates with MDCA. This allows MDCA to monitor and control the session in real time.

This step must come after registering the app in Microsoft Entra ID because the Conditional Access policy needs to target an existing app. It must also precede the MDCA-specific steps because the session control integration sets up the connection between Microsoft Entra ID and MDCA.

**Step 3: From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.**

After the Conditional Access policy routes sessions to MDCA, you need to configure App1 within MDCA by modifying its

Connected apps settings. This step involves ensuring that App1 is properly connected to MDCA, which may include configuring API connectors or verifying that MDCA can monitor the app's activities.

This step is necessary to ensure MDCA has the necessary permissions and configurations to monitor App1. It comes after the Conditional Access policy because the policy enables the integration, and now MDCA needs to be set up to handle the app.

Step 4: From Microsoft Defender for Cloud Apps, create a session policy.

Finally, you create a session policy in MDCA to define the real-time monitoring and control rules for App1. A session policy in MDCA allows you to monitor user activities (e.g., file downloads, data sharing) and apply actions (e.g., block, notify) based on predefined conditions.

This step is the last because it relies on the previous steps: the app must be registered, the Conditional Access policy must route sessions to MDCA, and the Connected apps settings must be configured for MDCA to recognize App1. Only then can you define session policies to enforce real-time monitoring.

Why This Order?

The order ensures a logical flow:

Registering the app in Microsoft Entra ID establishes the app's identity in the tenant.

The Conditional Access policy enables the integration with MDCA by routing sessions through it.

Modifying the Connected apps settings in MDCA ensures the app is properly set up for monitoring.

Creating a session policy in MDCA defines the specific monitoring and control rules for real-time session-level monitoring.

Deviating from this order would result in errors. For example, creating a session policy in MDCA before registering the app in Microsoft Entra ID would fail because MDCA wouldn't recognize the app.

Additional Considerations:

The Microsoft 365 E5 license includes Microsoft Entra ID P2 and Microsoft Defender for Cloud Apps, so no additional licensing is required for this scenario.

If App1 is not a supported app for MDCA's app connectors, additional steps (e.g., using a custom app connector) might be needed, but the question implies App1 can be monitored with the standard process.

Session policies in MDCA can include actions like blocking downloads or requiring step-up authentication, which are applied in real time during the user's session.

Conclusion: The correct order to enable real-time session-level monitoring of App1 using Microsoft Defender for Cloud Apps is:

Register App1 in Microsoft Entra ID.

Create a conditional access policy that has session controls configured.

From Microsoft Defender for Cloud Apps, modify the Connected apps settings for App1.

From Microsoft Defender for Cloud Apps, create a session policy.
