NEW QUESTION # 144

- A. apply-policy
site-list Hub
control-policy TLOC-Policy in
- B. apply-policy
site-list Spokes

Answer: B

Explanation:

TLOC policies modify OMP updates sent from vSmart to routers; to make spokes prefer the public-internet TLOC (preference 100) for routes originated by hub 10.101.1.1, attach the control policy in the outbound direction to the Spokes site-list: control-policy TLOC-Policy out.

NEW QUESTION # 145

How many vManage NMSs should be installed in each domain to achieve scalability and redundancy?

- A. two or more in a cluster
- **B. three or more in a cluster**
- C. two clusters
- D. two instances

Answer: B

Explanation:

vManage NMS Redundancy

A highly available Cisco SD-WAN network contains three or more vManage NMSs in each domain. This scenario is referred to as a cluster of vManage NMSs, and each vManage NMS in a cluster is referred to as a vManage instance. Each vManage instance or device in a cluster can manage approximately 2000 devices, so a cluster of three vManage devices can manage up to 6000 devices. The vManage devices automatically load-balances the devices that they manage.

With three devices, the vManage cluster remains operational if one of the devices in that cluster fail.
