Salesforce Certified MuleSoft Developer (Mule-Dev-201) Sample Questions (Q225-Q230):

NEW QUESTION # 225

A Mule application contains an ActiveMQ JMS dependency. The Mule application was developed in Anypoint Studio and runs successfully in Anypoint Studio.

The Mule application must now be exported from Anypoint Studio and shared with another developer.

What export options create the smallest JAR file that can be imported into the other developer's Anypoint Studio and run successfully?

A. Attach project sources
 Include project modules and dependencies

B. Attach project sources
 Include project modules and dependencies

C. Attach project sources
 Include project modules and dependencies

D. Attach project sources
 Include project modules and dependencies

- A. Option D
- B. Option A
- C. Option B
- D. Option C

Answer: A

NEW QUESTION # 226

Refer to the exhibits.

The mule application implements a REST API that accepts GET request from two URL's which are as follows

1) `http://acme.com/order/status`

2)

`http://acme.com/customer/status`

What path value should be set in HTTP listener configuration so that requests can be accepted for both these URL's using a single HTTP listener event source?

- A. */status
- B. *[order,customer]/status
- C. *status
- D. ?[order,customer]/status

Answer: A

Explanation:

Correct answer is */status as it is the correct way to use wildcards while configuring path value in HTTP listener

NEW QUESTION # 227

In the Database On Table Row operation, what does the Watermark column enable the On Table Row operation to do?

- A. To save the most recent records retrieved from a database to enable database caching
- B. To enable duplicate processing of records in a database
- C. To avoid duplicate processing of records in a database.
- D. To delete the most recent records retrieved from a database to enable database caching

Answer: C

Explanation:

The correct answer is To avoid duplicate processing of records in a database.

If a watermark column is provided, the values taken from that column are used to filter the contents of the next poll, so that only rows with a greater watermark value are returned. If an ID column is provided, this component automatically verifies that the same row is not picked twice by concurrent polls.

NEW QUESTION # 228

A shopping API contains a method to look up store details by department.

To get the information for a particular store, web clients will submit requests with a query parameter named department and uri parameter named storeId. What is valid RAML snippet that supports requests from a web client to get a data for a specific storeId and department name?

- A. 1./department:2.get:3.uriParameter:4.storeId:
- B. 1.get:2.queryParameter:3.department:4.uriParameter:5.{storeId}:
- C. 1.get:2.uriParameter:3.{storeId}:4.queryParameter:5.department:
- D. 1/{storeId}:2.get:3.queryParameter:4.department:

Answer: D

Explanation:

Lets revise few concepts RAML which can help us to find the answer of this question.

URI Parameters

Lets have a look at below example.

* /foos:

```
* /{id}:
* /name/{name}:
```

Here, the braces { } around property names define URI parameters. They represent placeholders in each URI and do not reference root-level RAML file properties as we saw above in the baseUrl declaration. The added lines represent the resources /foos/{id} and /foos/name/{name}.

Query Parameters

Now we'll define a way to query the foos collection using query parameters. Note that query parameters are defined using the same syntax that we used above for data types:

```
* /foos:
* get:
* description: List all Foos matching query criteria, if provided;
* otherwise list all Foos
* queryParameters:
* name?: string
* ownerName?: string
```

Based on the above information, below is the only option which defines storeId as uri parameter and department as query parameter.

```
* /{storeId}:
* get:
* queryParameter:
* department:
```

NEW QUESTION # 229

Refer to the exhibits. APIKit router is used to generate the flow components for RAML specification.

The Mule application must be available to REST clients using the two URL's

<http://localhost:8081/internal>

and <http://localhost:8081/external>

How many APIKit Router components are generated to handle requests to every endpoint defined in RAML specification?

1. Library.raml
2. /books
3. get:
4. post:
5. /order:
6. get
7. patch
8. /members
9. get:

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D
