## Free PDF 2026 Microsoft Useful Valid SC-900 Exam Testking

If you are looking to advance in the fast-paced and technological world, ExamsReviews is here to help you achieve this aim. ExamsReviews provides you with the excellent Microsoft SC-900 practice exam, which will make your dream come true of passing the Microsoft Security Compliance and Identity Fundamentals certification exam on the first attempt.

## Microsoft Security Compliance and Identity Fundamentals Sample Questions (Q200-Q205):

### NEW QUESTION # 200

Select the answer that correctly completes the sentence.

Answer Area

You can \_\_\_\_\_ the default security rules of a network security group (NSG).

Microsoft

amsreviews.com

override  
copy  
delete  
override

The image shows a screenshot of a Microsoft exam question. The question text is "You can \_\_\_\_\_ the default security rules of a network security group (NSG)." There are four options: "override", "copy", "delete", and "override". The first "override" option is highlighted in blue. The background of the screenshot shows the Microsoft logo and a watermark for "amsreviews.com".

**Answer:**

**Explanation:**

Answer Area

You can  the default security rules of a network security group (NSG).

- override
- copy
- delete
- override

Explanation:

Answer Area

You can  the default security rules of a network security group (NSG).

In Azure networking, each Network Security Group (NSG) is created with a built-in set of default security rules. Microsoft's documentation for NSGs explains: "Azure creates several default security rules within each network security group. You can't remove the default security rules, but you can override them by creating rules with a higher priority." The rule processing model is priority-based: "Security rules are processed in priority order, with lower numbers processed before higher numbers. Once a rule matches traffic, processing stops." Because the defaults have relatively low precedence (high priority numbers), an administrator can create an explicit allow or deny rule with a lower priority number to supersede the default behavior.

This is why the correct completion is override rather than copy or delete. You cannot delete the default rules; they remain present to provide baseline behavior (such as denying inbound traffic from the internet by default and allowing virtual network traffic). Instead, you override the defaults by adding your own NSG rules- using lower priority numbers-to achieve the desired access control outcome while preserving Azure's baseline protections and evaluation logic.

### NEW QUESTION # 201

Select the answer that correctly completes the sentence.

In an environment that has on-premises resources and cloud resources,

\_\_\_\_\_ should be the primary security perimeter.

- the cloud
- a firewall
- identity
- Microsoft Defender for Cloud

Answer:

Explanation:

In an environment that has on-premises resources and cloud resources,

\_\_\_\_\_ should be the primary security perimeter.

- the cloud
- a firewall
- identity
- Microsoft Defender for Cloud

In an environment that has on-premises resources and cloud resources,

\_\_\_\_\_ should be the primary security perimeter.

- the cloud
- a firewall
- identity
- Microsoft Defender for Cloud

**NEW QUESTION # 202**

Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Conditional access policies always enforce the use of multi-factor authentication (MFA).	<input type="radio"/>	<input type="radio"/>
Conditional access policies can be used to block access to an application based on the location of the user.	<input type="radio"/>	<input type="radio"/>
Conditional access policies only affect users who have Azure Active Directory (Azure AD)-joined devices.	<input type="radio"/>	<input type="radio"/>

**Answer:**

Explanation:

Statements	Yes	No
Conditional access policies always enforce the use of multi-factor authentication (MFA).	<input type="radio"/>	<input checked="" type="radio"/>
Conditional access policies can be used to block access to an application based on the location of the user.	<input checked="" type="radio"/>	<input type="radio"/>
Conditional access policies only affect users who have Azure Active Directory (Azure AD)-joined devices.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Statements	Yes	No
Conditional access policies always enforce the use of multi-factor authentication (MFA).	<input type="radio"/>	<input checked="" type="radio"/>
Conditional access policies can be used to block access to an application based on the location of the user.	<input checked="" type="radio"/>	<input type="radio"/>
Conditional access policies only affect users who have Azure Active Directory (Azure AD)-joined devices.	<input type="radio"/>	<input checked="" type="radio"/>

Microsoft Entra Conditional Access evaluates signals to make real-time access decisions. Microsoft describes it as bringing "signals together to make decisions and enforce organizational policies," where administrators choose controls such as Block access, Require multi-factor authentication, Require device to be marked as compliant, or Require hybrid Azure AD joined device. Because MFA is only one of several grant controls, it is incorrect that policies always enforce MFA; they can also simply block, allow, or require other conditions.

Location is a first-class condition. Microsoft states you can define named locations (by countries/regions or IP ranges) and then use them in policy conditions to block or grant access. A common scenario is "Block access from specific locations" or require additional controls when a sign-in originates from an untrusted network.

Therefore, Conditional Access can block access to an application based on user location.

Finally, Conditional Access targets users, groups, workload identities, and cloud apps regardless of device join state. Device-related conditions and filters are optional; policies are not limited to "Azure AD-joined devices." Controls like Require device to be marked as compliant or Require Hybrid Azure AD joined device are only enforced if configured. Hence, Conditional Access does not only affect users on Azure AD-joined devices.

**NEW QUESTION # 203**

Select the answer that correctly completes the sentence.

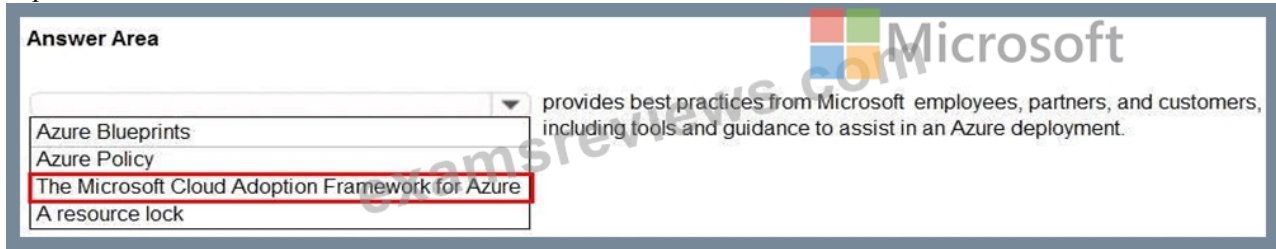

**Answer Area**

\_\_\_\_\_ provides best practices from Microsoft employees, partners, and customers, including tools and guidance to assist in an Azure deployment.

- Azure Blueprints
- Azure Policy
- The Microsoft Cloud Adoption Framework for Azure
- A resource lock

**Answer:**

Explanation:

The screenshot shows a search result for 'The Microsoft Cloud Adoption Framework for Azure'. The search bar contains the text 'The Microsoft Cloud Adoption Framework for Azure'. The search results list several items: 'Azure Blueprints', 'Azure Policy', 'The Microsoft Cloud Adoption Framework for Azure' (highlighted with a red box), and 'A resource lock'. To the right of the search bar, there is a description: 'provides best practices from Microsoft employees, partners, and customers, including tools and guidance to assist in an Azure deployment.' The Microsoft logo is visible in the top right corner of the search results area.

### NEW QUESTION # 204

Which three authentication methods does Windows Hello for Business support? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. PIN
- B. facial recognition
- C. fingerprint
- D. email verification
- E. security question

**Answer: A,B,C**

Explanation:

documents: =

Microsoft's Windows Hello for Business replaces passwords with strong, two-factor authentication that is tied to the device and unlocked with a user gesture. The Microsoft Learn description states that Windows Hello for Business "replaces passwords with strong authentication" and that "users sign in using a gesture, such as a PIN, facial recognition, or fingerprint." It further clarifies that the credential is protected by the device's secure hardware and that the gesture (PIN or biometric) unlocks the private key used to authenticate. The guidance explains that "biometrics (face or fingerprint) or a PIN" are supported as the user's sign-in method, and that the PIN "is unique to the device" and does not roam, reducing attack surface.

By contrast, email verification and security questions are not authentication gestures for Windows Hello for Business. They are not listed as supported methods for unlocking the Hello for Business key or completing interactive sign-in to Windows. Therefore, the three supported Windows Hello for Business authentication methods from the options provided are fingerprint, facial recognition, and PIN. This aligns with Microsoft's documented model where the user enrolls a biometric (face or fingerprint) or creates a PIN, and subsequently uses that gesture to unlock the hardware-bound credential for secure sign-in and access to resources.

### NEW QUESTION # 205

.....

Our SC-900 cram materials take the clients' needs to pass the test smoothly into full consideration. The questions and answers boast high hit rate and the odds that they may appear in the real exam are high. Our SC-900 exam questions have included all the information. Our SC-900 cram materials analysis the popular trend among the industry and the possible answers and questions which may appear in the real exam fully. Our SC-900 Latest Exam file stimulate the real exam's environment and pace to help the learners to get a well preparation for the real exam in advance.
