## Fortinet FCP - Google Cloud Security 7.6 Administrator Sample Questions (Q21-Q26):

### NEW QUESTION # 21

Your organization has deployed an active-active high-availability (HA) FortiGate cluster in Google Cloud.

You have noticed a significant increase in asymmetrical traffic flow.

Which two actions can you take to mitigate the issue? (Choose two.)

- A. Enable destination NAT for ingress traffic.
- B. Enable the layer 3 unified threat management (UTM) scanning feature if the FortiGate devices are on FortiOS 6.4 or later.
- C. Enable symmetric hashing on the external load balancer.
- D. Enable source NAT for ingress traffic.

Answer: C,D

Explanation:

Enabling source NAT ensures consistent source IPs, promoting symmetric traffic flow. Symmetric hashing on the load balancer helps distribute traffic flows evenly and consistently across cluster members, reducing asymmetric routing.

### NEW QUESTION # 22

Refer to the exhibit.

```
Google Cloud Fabric Connector
FortiGate-VM64-GCP # gcp: add GCP Lab
gcpd sdn connector GCP Lab prepare to update
gcpd get token
gcpd metadata url: http://169.254.169.254/computeMetadata/v1/instance/service-accounts/default/token
gcpd metadata result:200
Token expires in: 3599 seconds
gcpd metadata url: http://169.254.169.254/computeMetadata/v1/project/project-id
gcpd metadata result:200
gcpd got project id from metadata: fcp-fcss-course-development
gcpd sdn connector GCP Lab start updating
gcpd sdn connector GCP Lab got empty project list, trying sdn update from metadata project: fcp-fcss-course-development
gcpd sdn connector GCP Lab get instance list successfully
gcpd didn't find any GKE cluster for project fcp-fcss-course-development
gcpd sdn connector GCP Lab list GKE cluster failed
GCP Lab got 3 addresses
gcpd sdn connector GCP Lab start updating IP addresses
gcpd sdn connector GCP Lab finish updating IP addresses
```

An administrator configured GoogleCloud as an external fabric connector on FortiGate. Which conclusion can you draw from the output?

- A. The external fabric connector shows that an administrator created three dynamic firewall addresses.
- B. The external fabric connector is misconfigured.
- C. The external fabric connector is unable to find a valid Google Cloud project.
- D. The external fabric connector found multiple IP addresses assigned to Google Cloud instances.

**Answer: D**

Explanation:

The output shows the connector successfully retrieved project information and instance IP addresses (GCP Lab got 3 addresses), indicating it found multiple IPs assigned to Google Cloud instances.

### NEW QUESTION # 23

Your organization is running an application in their shared services virtual public cloud (VPC) and must control network access natively in the cloud.

How can your organization meet this requirement?

- A. Create another VPC in front of the shared services VPC and deploy FortiGate.
- B. Create IAM access to allow access from specified resources only.
- C. Create a firewall policy for the entire VPC that allows access from all networks.
- D. Create a firewall rule that allows access to the application instance only.

**Answer: D**

Explanation:

Creating specific firewall rules that restrict access directly to the application instance allows precise native network access control within the shared services VPC.

### NEW QUESTION # 24

An organization is planning to deploy two FortiGate VMs in two different regions.

Which two Google Cloud core components can span both FortiGate VMs in both regions? (Choose two.)

- A. Google Cloud project
- B. Google Cloud subnet
- C. Google Cloud virtual private cloud
- D. Google Cloud zone

**Answer: A,C**

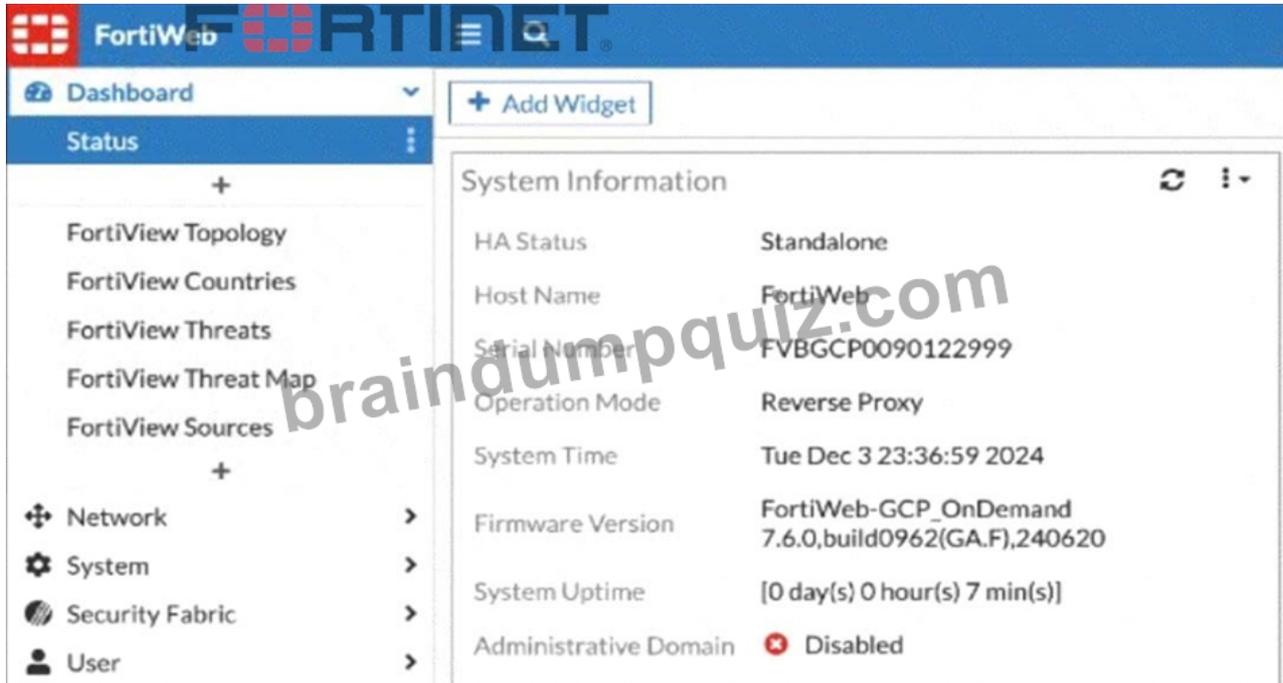

Explanation:

A Google Cloud VPC can span multiple regions, allowing FortiGate VMs in different regions to be part of the same network.

A Google Cloud project provides the administrative boundary that can include resources across multiple regions and VPCs, enabling centralized management of both FortiGate VMs.

### NEW QUESTION # 25
