질문 # 116
If the SOAR New status is removed and replaced by In Progress, what status is shown for containers that had the new status before the replacement?

- A. In Progress
- B. In Progress

- C. New
- D. New

정답：B

질문 # 117
Which of the following is an advantage of using the Visual Playbook Editor?

- A. Easier playbook maintenance.
- B. The Visual Playbook Editor is the only way to generate user prompts.
- C. Supports Python or Javascript.
- D. Eliminates any need to use Python code.

정답：A

설명:
Visual Playbook Editor is a feature of Splunk SOAR that allows you to create, edit, and implement automated playbooks using visual building blocks and execution flow lanes, without having to write code. The Visual Playbook Editor automatically generates the code for you, which you can view and edit in the Code Editor if needed. The Visual Playbook Editor also supports Python and Javascript as scripting languages for custom code blocks. One of the advantages of using the Visual Playbook Editor is that it makes playbook maintenance easier, as you can quickly modify, test, and debug your playbooks using the graphical interface. Therefore, option D is the correct answer, as it states an advantage of using the Visual Playbook Editor. Option A is incorrect, because using the Visual Playbook Editor does not eliminate the need to use Python code, but rather simplifies the process of creating and editing code. You can still add custom Python code to your playbooks using the custom function block or the Code Editor. Option B is incorrect, because the Visual Playbook Editor is not the only way to generate user prompts, but rather one of the ways. You can also generate user prompts using the classic playbook editor or the Code Editor. Option C is incorrect, because supporting Python or Javascript is not an advantage of using the Visual Playbook Editor, but rather a feature of Splunk SOAR in general. You can use Python or Javascript in any of the playbook editors, not just the Visual Playbook Editor.

질문 # 118
Which app allows a user to run Splunk queries from within Phantom?

- A. The Integrated Splunk/Phantom app.
- B. Splunk App for Phantom Reporting.
- C. Phantom App for Splunk.
- D. Splunk App for Phantom?

정답：C

설명:
Explanation
The Phantom App for Splunk allows a user to run Splunk queries from within Phantom. This app provides actions such as run query, ingest events, and save search, which enable the user to interact with Splunk from Phantom playbooks or the Phantom UI. The other apps are not relevant for this use case. The Splunk App for Phantom is used to send data from Splunk to Phantom. The Integrated Splunk/Phantom app is a deprecated app that was replaced by the Splunk App for Phantom. The Splunk App for Phantom Reporting is used to generate reports on Phantom activity from Splunk. Reference, page 1.

질문 # 119
Which is the primary system requirement that should be increased with heavy usage of the file vault?

- A. Amount of storage.
- B. Bandwidth of network.
- C. Amount of memory.
- D. Number of processors.

정답：A

설명:
Explanation
The primary system requirement that should be increased with heavy usage of the file vault is the amount of storage. The file vault is a secure repository for storing files on Phantom. The more files are stored, the more storage space is needed. The other options are not directly related to the file vault usage. See [File vault] for more information.

질문 # 120
Which of the following accurately describes the Files tab on the Investigate page?

- A. Files tab items and artifacts are the only data sources that can populate active cases.
- B. Files tab items cannot be added to investigations. Instead, add them to action blocks.
- C. A user can upload the output from a detonate action to the the files tab for further investigation.
- D. Phantom memory requirements remain static, regardless of Files tab usage.

정답：C

설명:
The Files tab on the Investigate page allows the user to upload, download, and view files related to an investigation. A user can upload the output from a detonate action to the Files tab for further investigation, such as analyzing the file metadata, content, or hash. Files tab items and artifacts are not the only data sources that can populate active cases, as cases can also include events, tasks, notes, and comments. Files tab items can be added to investigations by using the add file action block or the Add File button on the Files tab. Phantom memory requirements may increase depending on the Files tab usage, as files are stored in the Phantom database.
The Files tab on the Investigate page in Splunk Phantom is an area where users can manage and analyze files related to an investigation. Users can upload files, such as outputs from a 'detonate file' action which analyzes potentially malicious files in a sandbox environment. The files tab allows users to store and further investigate these outputs, which can include reports, logs, or any other file types that have been generated or are relevant to the investigation. The Files tab is an integral part of the investigation process, providing easy access to file data for analysis and correlation with other incident data.
