NEW QUESTION # 70

How many agents does NPM require for Quality of Experience, NetPath, and system monitoring on the same Windows server?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:
NPM requires only one agent for Quality of Experience, NetPath, and system monitoring on the same Windows server. The agent is a software component that collects data from the server and sends it to the Orion server1. The agent can perform multiple tasks, such as packet analysis, network path analysis, and system health monitoring, depending on the configuration and the license2. You can install the agent on the server either manually or remotely from the Orion Web Console3. NEW QUESTION # 71
The Orion platform supports agent-based monitoring for which OS types? (Choose all that apply.)

- A. AIX Unix Agents
- B. Linux
- C. Sun Solaris
- D. IBM
- E. Windows

Answer: A,B,E

Explanation:
The Orion platform supports agent-based monitoring for Windows, Linux/Unix, and AIX systems. An Orion agent is software that provides a communication channel between the Orion server and the target system, as an alternative to WMI or SNMP. Agent-based monitoring can offer better performance, security, and reliability than agentless monitoring, especially for remote or cloud-based systems. The Orion platform does not support agent-based monitoring for Sun Solaris or IBM systems, as they are not compatible with the agent software. - A. TRUE
- B. FALSE

You can use Device Studio to create pollers for CPU and memory, as well as other metrics, by defining the object identifiers (OIDs) and formulas that you want to poll. Device Studio currently supports SNMP and WMI polling technologies, and you can test, assign, and edit your custom pollers from the Manage Pollers page. References: Create pollers in Device Studio for NPM, Device Studio, Device Studio Poller.
