Don't worry, with NewPassLeader AZ-801 exam training materials, any IT certification exam can be easily coped with. Our AZ-801 Exam Training materials is the achievement that NewPassLeader's experienced IT experts worked out through years of constant exploration and practice. NewPassLeader will be your best choice.

Microsoft Configuring Windows Server Hybrid Advanced Services Sample Questions (Q207-Q212):

NEW QUESTION # 207

You have a failover cluster named FC1 that contains two nodes named Server1 and Server2. FC1 is configured to use a file share witness.

You plan to configure FC1 to use a cloud witness.

You need to configure Azure Storage accounts for the cloud witness.

Which storage account type and authorization method should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Storage account type: 

- Premium block blobs
- Premium file shares
- Premium page blobs
- Standard

Authentication method: 

- Access key
- Shared access signature (SAS)
- System-assigned managed identity in Azure Active Directory (Azure AD)
- User-assigned managed identity in Azure Active Directory (Azure AD)

Answer:

Explanation:

Storage account type: 

- Premium block blobs
- Premium file shares
- Premium page blobs
- Standard

Authentication method: 

- Access key
- Shared access signature (SAS)
- System-assigned managed identity in Azure Active Directory (Azure AD)
- User-assigned managed identity in Azure Active Directory (Azure AD)

NEW QUESTION # 208

You have two Azure virtual machines named VM1 and VM2. VM1 is backed up to an Azure Recovery Services vault daily and retains backups for 30 days.

You need to restore an individual file named C:\Data\Important.docx from VM1 to VM2. The solution must minimize administrative effort.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Unmount the disks.	
Download the file recovery script for VM1.	
Copy the file by using Azure Storage Explorer.	
Copy the file by using File Explorer.	
Restore the file by using Windows Server Backup.	
Run the file recovery script on VM2.	

Answer:

Explanation:

Actions	Answer Area
Unmount the disks.	Download the file recovery script for VM1.
Download the file recovery script for VM1.	Run the file recovery script on VM2.
Copy the file by using Azure Storage Explorer.	Copy the file by using File Explorer.
Copy the file by using File Explorer.	Unmount the disks.
Restore the file by using Windows Server Backup.	
Run the file recovery script on VM2.

NEW QUESTION # 209

You have a server named Server1 that runs Windows Server.

On Server1, you create a Data Collector Set named CollectorSet1 based on the Basic template.

You need to configure CollectorSet1 to meet the following requirements:

- * Older performance counter logs must be overwritten by new ones.
- * Performance counter logging must stop if there is less than 500 MB of free disk space.

What should you configure for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Older performance counter logs must be overwritten by new ones:

<input type="checkbox"/>	The Configuration properties
<input type="checkbox"/>	The Data Manager properties
<input type="checkbox"/>	The Performance Counter properties

Performance counter logging must stop if there is less than 500 MB of free disk space:

<input type="checkbox"/>	The Configuration properties
<input checked="" type="checkbox"/>	The Data Manager properties
<input type="checkbox"/>	The Performance Counter properties

Answer:

Explanation:

Older performance counter logs must be overwritten by new ones:

Microsoft

<input type="checkbox"/>	The Configuration properties
<input checked="" type="checkbox"/>	The Data Manager properties
<input type="checkbox"/>	The Performance Counter properties

Performance counter logging must stop if there is less than 500 MB of free disk space:

<input type="checkbox"/>	The Configuration properties
<input checked="" type="checkbox"/>	The Data Manager properties
<input type="checkbox"/>	The Performance Counter properties

Explanation

Table Description automatically generated with medium confidence

Older performance counter logs must be overwritten by new ones:	<input type="checkbox"/>	The Configuration properties
	<input checked="" type="checkbox"/>	The Data Manager properties
	<input type="checkbox"/>	The Performance Counter properties
Performance counter logging must stop if there is less than 500 MB of free disk space:	<input type="checkbox"/>	The Configuration properties
	<input checked="" type="checkbox"/>	The Data Manager properties
	<input type="checkbox"/>	The Performance Counter properties

NEW QUESTION # 210

You have a server named Server1 that runs Windows Server and has the Web Server (IIS) server role installed. Server1 hosts an ASP.NET Core web app named WebApp1 and the app's source files.

You install Docker on Server1.

You need to ensure that you can deploy WebApp1 to an Azure App Service web app from the Azure Container Registry.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run the <code>docker push</code> command.	
Run the <code>docker run</code> command.	
Run the <code>docker build</code> command.	
Create a Dockerfile.	
Create an Azure Resource Manager (ARM) template.	
Run the <code>docker pull</code> command.	

Answer:

Explanation:

Actions	Answer Area
Run the <code>docker push</code> command.	<div style="border: 1px dashed red; padding: 5px;"> <p>Create a Dockerfile.</p> <hr/> <p>Run the <code>docker build</code> command.</p> <hr/> <p>Run the <code>docker push</code> command.</p> </div>
Run the <code>docker run</code> command.	
Run the <code>docker build</code> command.	
Create a Dockerfile.	
Create an Azure Resource Manager (ARM) template.	
Run the <code>docker pull</code> command.	

Explanation:

- Step 1: Create a Dockerfile. This file contains instructions for the build process.
- Step 2: Run the `docker build` command to create a container image.
- Step 3: Run the `docker push` command to upload the image to Azure Container Registry.

NEW QUESTION # 211

You have a Windows Server Failover Cluster (WSFQ) that contains five nodes. You need to ensure that if a network link fails on one of the nodes, the workloads are distributed across the remaining nodes during a failover. The solution must ensure that the workloads are distributed across all the nodes as evenly as possible. Which command should you run?

- A. `(Get-ClusterNode). Name | % { (Get-ClusterNode $_).NodeWeight - 1 }`
- B. `(Get-ClusterNode). Name | % { (Get-ClusterNode $_).NodeWeight - 0 }`
- C. `(Get-Cluster). Name | % { (Get-Cluster $_).NodeWeight - 0 }`
- D. `(Get-Cluster). Name | % { (Get-Cluster $_).NodeHeight - 1 >`

Answer: A
