## CAD Real Test Preparation Materials - CAD Guide Torrent - ITPassLeader

To do this you just need to pass CAD exam, which is quite challenging and demands thorough Certified Application Developer-ServiceNow (CAD) exam preparation. For the complete, comprehensive and quick CAD Exam Preparation, the ITPassLeader CAD Dumps questions are ideal. You should not ignore it and must try ITPassLeader CAD exam questions for preparation today.

## ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q104-Q109):

### NEW QUESTION # 104

Which of the following statements does NOT apply when extending an existing table?

- A. The new table inherits all of the fields from the parent table
- **B. You must script and configure all required behaviors**
- C. The new table inherits the functionality built into the parent table
- D. The parent table's Access Controls are evaluated when determining access to the new table's records and fields

**Answer: B**

Explanation:

You must script and configure all required behaviors. Provided link has this statement: Extending an existing ServiceNow table means the new table inherits the parent table's columns as well as its business logic.

The following statements apply when extending an existing table:

\* The parent table's Access Controls are evaluated when determining access to the new table's records and fields. This is true because Access Control (ACL) rules are inherited from the parent table to the child table, unless the child table has its own ACL rules that override the parent table's rules. ACL rules are used to restrict the access to the data and functionality of the ServiceNow platform based on the user's roles and conditions.

\* The new table inherits the functionality built into the parent table. This is true because the new table inherits the business logic and the relationships from the parent table, such as Business Rules, Script Includes, UI Actions, UI Policies, and Reference Fields. Business logic and relationships are used to define the behavior and the structure of the data on the ServiceNow platform.

\* The new table inherits all of the fields from the parent table. This is true because the new table inherits the columns and the attributes from the parent table, such as Field Name, Data Type, Default Value, and Mandatory. Columns and attributes are used to define the properties and the characteristics of the data

\* on the ServiceNow platform.

The following statement does not apply when extending an existing table:

\* You must script and configure all required behaviors. This is false because you do not have to script and configure all required behaviors when extending an existing table, as some of the behaviors are already inherited from the parent table, as explained above. However, you can script and configure additional or customized behaviors for the new table, such as adding new fields, creating new Business Rules, or modifying existing UI Actions. References: Table Extension, Access Control Rules

### NEW QUESTION # 105

What field type would you select if you want to query records from another table on a form?

- A. Use the Phone Number field type.
- **B. Use the Reference field type.**
- C. Use the Date field type.
- D. Use the String field type.

**Answer: B**

Explanation:

Comprehensive and Detailed Step-by-Step Explanation:

\* Reference Field Type:

\* The Reference field type is used to create a relationship between two tables. It allows you to select and display records from another table directly on a form.

\* For example, adding a "Caller" field to an Incident form enables you to query and select records from the sys\_user table.

\* Why Other Options Are Incorrect:

\* Option B (Phone Number field type): This is used for storing phone numbers, not for querying records from another table.

\* Option C (String field type): While this stores plain text, it does not allow querying or establishing relationships with other tables.

\* Option D (Date field type): This is used for date or time values, not for referencing another table.

References:

\* ServiceNow Developer Documentation on Field Types.

### NEW QUESTION # 106

Which one of the following is NOT a method used for logging messages in a server-side script for a privately- scoped application?

- **A. gs.log()**
- B. gs.error()
- C. gs.warn()
- D. gs.debug()

**Answer: A**

Explanation:

Explanation/Reference: [https://community.servicenow.com/community?id=community\\_question&sys\\_id=bd71cb29db98dbc01dcaf3231f9619c6](https://community.servicenow.com/community?id=community_question&sys_id=bd71cb29db98dbc01dcaf3231f9619c6)

### NEW QUESTION # 107

How does the Application Picker interact with Application Scope in ServiceNow?

- A. Global is a reserved application which does not appear in the Application Picker.
- B. Selecting an application from the Application Picker does not set the Application Scope.
- C. Selecting Global in the Application Picker sets the Application Scope to Incident.
- **D. Selecting an application from the Application Picker sets the Application Scope.**

**Answer: D**

Explanation:

In ServiceNow, the Application Picker is a tool that allows developers to select the active application scope.

When an application is selected from the Application Picker, it sets the Application Scope to that application.

This means that any configurations, scripts, or customizations made will be associated with the selected application's scope.

Therefore, the correct answer is D.

The other options are incorrect:

\* A. Selecting Global in the Application Picker sets the Application Scope to Incident: Selecting "Global" sets the scope to the global application, not specifically to Incident.

\* B. Global is a reserved application which does not appear in the Application Picker: The Global application does appear in the Application Picker and can be selected.

\* C. Selecting an application from the Application Picker does not set the Application Scope: Selecting an application does set the Application Scope.

For more detailed information, refer to the official ServiceNow documentation on Application Scope.

### NEW QUESTION # 108

Which platform feature can be used to determine the relationships between field in an Import Set table to field in an existing ServiceNow table?

- A. Business Service Management Map
- B. CI Relationship Builder
- **C. Transform Map**
- D. Data Sources

**Answer: C**

Explanation:

A transform map determines the relationships between fields displaying in an Import Set table and fields in an existing ServiceNow table, such as the Incidents or Users table.

Reference:

The following platform feature can be used to determine the relationships between fields in an Import Set table to fields in an existing ServiceNow table:

Transform Map. This is a feature that defines the mapping between the fields of an Import Set table and the fields of a target table, such as incident, problem, or user. A transform map also specifies the logic and rules for transforming the imported data, such as coalescing, scripting, or applying data policies.

The following platform features are not used to determine the relationships between fields in an Import Set table to fields in an existing ServiceNow table:

Business Service Management Map. This is a feature that provides a graphical representation of the configuration items (CIs) and their relationships in the Configuration Management Database (CMDB). A Business Service Management Map can be used to visualize the impact of incidents, changes, or problems on the CIs and the services they support.

Data Sources. This is a feature that defines the connection and authentication information for an external data source, such as a file, a JDBC database, or a web service. A data source is used to import data from the external source into an Import Set table.

CI Relationship Builder. This is a feature that creates relationships between CIs in the CMDB based on predefined or custom rules. A CI Relationship Builder can be used to populate the CMDB with the dependencies and connections between the CIs. Reference: Transform Maps, Business Service Management Map, Data Sources, CI Relationship Builder

### NEW QUESTION # 109

.....

Are you ready to take your career to the next level with the Certified Application Developer-ServiceNow (CAD)? Look no further

than ITPassLeader for all of your CAD exam needs. Our comprehensive and cost-effective solution includes regularly updated ServiceNow CAD Exam Questions, available in a convenient PDF format that can be downloaded on any device, including PC, laptop, mac, tablet, and smartphone.
