NEW QUESTION # 183

Universal Containers implemented a private sharing model for the Account object. A custom Account search tool was developed with Apex to help sales representatives find accounts that match multiple criteria they specify. Since its release, users of the tool report they can see Accounts they do not own.

What should the developer use to enforce sharing permissions for the currently logged in user while using the custom search tool?

- A. Use the schema describe calls to determine if the logged-in user has access to the Account object.
- B. Use the UserInfo Apex class to filter all SOQL queries to returned records owned by the logged-in user.
- C. Use the without sharing keyword on the class declaration.
- **D. Use the with sharing keyword on the class declaration.**

Answer: D

Explanation:

The with sharing keyword ensures that the Apex class respects the sharing rules of the current user, including private sharing models. This means the logged-in user will only see records they own or have been shared with them.

Reference: Apex Class Sharing Rules

Incorrect Options:

B. without sharing ignores sharing rules, exposing data the user does not have access to.

C:Filtering with UserInfo is not a scalable or maintainable solution.

D:Schema describe calls do not enforce sharing permissions but only check object-level access.
