

高通過率的新版CDP-3002題庫上線 & Cloudera CDP-3002考試證照綜述：CDP Data Engineer - Certification Exam最新發布

2026 Testpdf最新的CDP-3002 PDF版考試題庫和CDP-3002考試問題和答案免費分享：<https://drive.google.com/open?id=1VJ-nLAfwvCwAOPKWTaVjZKv9jBAY0aCO>

Testpdf是個可以滿足很多客戶的需求的網站。有些使用我們類比測試軟體已經通過相關IT認證考試的人成為了Testpdf的回頭客。Testpdf可以提供領先的Cloudera 培訓技術助你通過Cloudera CDP-3002 認證考試。

Cloudera的認證考試最近越來越受到大家的歡迎了。IT認證考試有很多種。你參加過哪一個考試呢？比如CDP-3002等很多種考試。這些都是很重要的考試，你想參加哪一個呢？我們在這裏說一下CDP-3002認證考試。如果你想參加這個考試，那麼Testpdf的CDP-3002考古題可以幫助你輕鬆通過考試。

Cloudera CDP-3002考試證照綜述，CDP-3002 PDF

Testpdf的產品是為你們參加Cloudera CDP-3002認證考試而準備的。Testpdf提供的培訓資料不僅包括與Cloudera CDP-3002認證考試相關的資訊技術培訓資料，來鞏固專業知識，而且還有準確性很高的關於Cloudera CDP-3002的認證考試的相關考試練習題和答案。可以保證你第一次參加Cloudera CDP-3002的認證考試就以高分順利通過。

最新的 Cloudera Certification CDP-3002 免費考試真題 (Q93-Q98):

問題 #93

What command and parameters should be used to update an existing Spark job in the Cloudera Data Engineering (CDE) service to increase its executor memory using the CDE CLI?

- A. `cde job config -name my-spark-job -set spark.executor.memory=6g`
- B. `cde job run -edit my-spark-job -conf spark.executor.memory=6g`
- C. `cde spark submit -update -name my-spark-job -executor-memory 6G`
- D. `cde job update -name my-spark-job --conf spark.executor.memory=6g`

答案：D

解題說明：

To update an existing Spark job in the Cloudera Data Engineering (CDE) service to increase its executor memory, the correct command is `cde job update` followed by the `--name` parameter to specify the job and the `--conf` flag to set the new configuration for `spark.executor.memory`. This command allows you to modify the job's configuration parameters directly via the CDE CLI, enabling adjustments to resource allocations such as executor memory.

問題 #94

You're deploying your Airflow DAGs to a production environment. What are some key considerations for ensuring security and

reliability?

- **A. Implement role-based access control (RBAC) to restrict access to sensitive DAGs and resources.**
- B. Disable task logging to improve DAG execution performance.
- C. Configure Airflow to run with high resource limits to handle unexpected spikes in workload.
- D. Schedule DAG runs as frequently as possible to ensure real-time data processing.

答案: A

解題說明:

Security is paramount in production environments. Option A highlights the importance of using RBAC to control access and prevent unauthorized modifications to DAGs. While resource allocation, logging, and scheduling are important aspects, option A addresses the critical security concern.

問題 #95

You're tasked with optimizing an existing Airflow DAG that processes large datasets daily. The DAG has multiple tasks, some of which frequently fail due to memory constraints on the worker nodes. Which approach would best mitigate this issue without upgrading hardware?

- A. Increase the priority_weight of memory-intensive tasks to ensure they run first.
- B. Implement the Retry operator to automatically retry failed tasks.
- **C. Use the Pool feature to limit the number of concurrent memory-intensive tasks.**
- D. Split the DAG into multiple smaller DAGs to reduce the load on workers.

答案: C

解題說明:

The Pool feature in Airflow allows you to limit the number of tasks running concurrently in a given pool of resources, which can help manage memory usage and prevent workers from being overwhelmed by memory-intensive tasks. By assigning memory-intensive tasks to a pool with a limited number of slots, you ensure that only a certain number of these tasks can execute at the same time, thereby managing the overall memory consumption on worker nodes. Increasing priority_weight affects task scheduling order but does not manage resource constraints, retrying tasks does not address the root cause of memory issues, and splitting the DAG might help organizational clarity but does not directly address concurrent memory usage.

問題 #96

What technique can be employed to optimize join performance by reducing data shuffle across the network?

- **A. Using broadcast joins for smaller datasets**
- B. Increasing the number of partitions
- C. Decreasing the memory allocated to executors
- D. Partitioning both datasets on a different key

答案: A

解題說明:

Broadcast joins can significantly improve join performance, especially when one side of the join is relatively small. By broadcasting the smaller dataset to all nodes, the need for shuffling large amounts of data across the network is eliminated, reducing the join operation's overall time and network I/O.

問題 #97

You've deployed a Spark application using CDE that works heavily with Iceberg tables. To optimize performance, you want to ensure effective use of Kubernetes resources. Which of the following strategies helpful? (Choose two)

- **A. Leverage Kubernetes taints and tolerations to dedicate specific nodes to Iceberg workloads.**
- B. Implement Kubernetes liveness and readiness probes for your Spark driver and executor pods.
- C. Set pod anti-affinity rules to prevent multiple Spark tasks from being scheduled on the same node.
- **D. Configure dynamic resource allocation for your Spark executors.**
- E. Always use the latest available version of Spark.

答案: A,D

解題說明:

A). Dynamic resource allocation lets Spark scale up and down based on workload, improving resource usage efficiency. D. Taints and tolerations provide fine-grained control over pod scheduling, ensuring critical Iceberg jobs get priority on suitable nodes. B. While pod anti-affinity can help, resource distribution for data-intensive tasks is more important. C. Probes ensure Kubernetes restarts failed pods, but don't directly impact Iceberg performance. E. Newer Spark versions may have Iceberg optimizations, but resource management is crucial. Spark
