Pass-Sure Latest SCP-NPM Exam Notes Provide Prefect Assistance in SCP-NPM Preparation

Dumpexams SolarWinds SCP-NPM exam dumps are the best reference materials. Dumpexams test questions and answers are the training materials you have been looking for. This is a special IT exam dumps for all candidates. Dumpexams pdf real questions and answers will help you prepare well enough for SolarWinds SCP-NPM test in the short period of time and pass your exam successfully. If you don't want to waste a lot of time and efforts on the exam, you had better select Dumpexams SolarWinds SCP-NPM Dumps. Using this certification training dumps can let you improve the efficiency of your studying so that it can help you save much more time.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor) Certification Exam is an essential certification for IT professionals who want to demonstrate their expertise in managing and optimizing network performance. SCP-NPM exam covers a wide range of topics related to network performance monitoring, and it is available online from anywhere in the world. IT professionals who hold the SCP-NPM Certification are in high demand, and they are often able to command higher salaries and more job opportunities than their non-certified peers.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

You configured devices to send SNMP traps to NPM, but do not see the messages in the Orion Web Console. You verified that the firewall ports are open and the devices are correctly configured. What can you verify to troubleshoot the cause?

- A. Verify the SNMP trap service is running
- B. Verify you configured the SNMP Traps view in the Orion Web Console
- C. Verify you use Log Analyzer to view traps
- D. Verify that you have the SNMP Trap module installed for NPM

Answer: A

NEW QUESTION # 17

After you create an NPM report with custom charts for availability and response time metrics, you schedule the report and add an action to export it. But you cannot export it as an Excel file. What is the likely reason?

- A. You do not have the permissions to export the report
- B. The custom charts only support a PDF export
- C. You must link the report with a URL in an email action to run live in the web console
- D. Excel file formats are not supported

Answer: D

NEW QUESTION # 18

NPM polls static properties, and calculates bandwidth consumption based on the total amount of _____ coming through the firewall.

- A. Bytes
- B. Kilobytes
- C. Megabytes
- D. Nibbles

Answer: A

NEW QUESTION # 19

Retention policies require you to keep Syslog messages in the database for 9 days before you can discard them. Syslog messages from 8 days ago are missing.

What is likely the issue?

- A. Detailed records are summarized after seven days
- B. Database compaction runs weekly
- C. Default Syslog web filter is seven days
- **D. Default Syslog retention period is seven days**

Answer: D

Explanation:

By default, Orion NPM retains Syslog messages in the database for seven days before discarding them. This means that any Syslog messages older than seven days are deleted from the database and cannot be viewed or searched in the web console. To change the default Syslog retention period, you need to modify the Database Settings on the Orion Polling Settings page in the web console. You can also use the Database Manager tool to manually delete or archive Syslog messages from the database. Reference: SolarWinds SCP Study Aid - NPM, page 19; NPM Administrator Guide, page 111.

NEW QUESTION # 20

Half of your objects in a nested map are down, but the top level map is up. What is the cause?

- A. You set availability thresholds for devices to below 50%
- **B. You set map status thresholds to above 50%**
- C. You set map status thresholds to below 50%
- D. You set availability thresholds for devices to above 50%

Answer: B

Explanation:

Map status thresholds determine how the status of a map is calculated based on the status of its child objects. If you set the map status threshold to above 50%, it means that the map will be up if more than half of its child objects are up, regardless of the severity of the down objects. This can cause a situation where half of your objects in a nested map are down, but the top level map is up, because the top level map only considers the status of the nested maps, not the individual objects within them. To avoid this, you can lower the map status threshold to a value that reflects the desired level of availability for your network, or use custom map status thresholds to specify different values for different maps. Reference: Set map status thresholds in NPM, Create nested maps in NPM, How to map through a deeply nested array of objects?
