Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q156-Q161):

NEW QUESTION # 156

An engineer is designing the QoS strategy for Company XYZ. Based on initial analysis, a lot of scavenger type of traffic is traversing the network's 20Mb Internet link toward the service provider. The new design must use a QoS technique that limits scavenger traffic to 2 Mbps, which helps avoid oversubscription of the link during times of congestion. Which QoS technique can be used to facilitate this requirement?

- A. class-based traffic shaping
- B. class-based traffic policing
- C. LLQ
- **D. CBWFQ**

Answer: D

NEW QUESTION # 157

Refer to the table.

A customer investigates connectivity options for a DCI between two production data centers to aid a large-scale migration project. The solution must provide a single 10G connection between locations and be able to run its own varying QoS profiles without service provider interaction based on the migration stages. All connectivity methods are at 10 Gbps. Which transport technology costs the least if the connectivity is required for just one year?

- **A. Metro Ethernet**
- B. DWDM over dark fiber
- C. CWDM over dark fiber
- D. MPLS wires only

Answer: A

NEW QUESTION # 158

The CIA triad is foundational to information security, and one can be certain that one or more of the principles within the CIA triad has been violated when data is leaked or a system is attacked. Drag and drop the countermeasures on the left to the appropriate principle section on the right in any order.

Answer:

NEW QUESTION # 159

A mega store plans to expand its business into the online world, and wants to operate using the highest possible security standards to prove to their customers that they take handling of their payment information seriously. Only TLS v1.3 will be allowed on their websites.

Which type of SSL certificate will emphasize their commitment to enforcing high security standards and minimize risk of spoofing?

- A. DV SSL certificate
- B. OV SSL certificate
- **C. EV SSL certificate**
- D. PV SSL certificate

Answer: C

Explanation:

An Extended Validation (EV) SSL certificate provides the highest level of validation, displaying the organization's verified identity in

the browser and minimizing the risk of spoofing. This strongly emphasizes the company's commitment to security when handling sensitive data such as payment information.

NEW QUESTION # 160

In a redundant hub and spoke "wheel" design, all spokes are connected to the hub, and spokes are connected to other spokes as well. During failure on one spoke link, the traffic from that site can be sent to a neighboring site for it to be forwarded to the hub site. But during peak hours, a link is overloaded and traffic is re-routed to a neighbor, which subsequently becomes overloaded. This overload results in network traffic oscillation as the load varies at each spoke site. This design provides more redundancy but not more resiliency because the routing protocol must process many alternate paths to determine the lowest cost path. Which two design changes help to improve resilience in this case? (Choose two.)

- A. Increase unequal-cost parallel paths.
- B. Use two links to each remote site instead of one.
- C. Increase the number of redundant paths considered during the routing convergence calculation.
- D. Increase routing protocol convergence timers.
- E. Eliminate links between every spoke.

Answer: A,B

NEW QUESTION # 161
