## C\_TS414\_2023 최고 패스 자료 & C\_TS414\_2023 시험 덤프 샘플

Pass4Test의 SAP인증 C\_TS414\_2023 덤프를 공부하시면 한 방에 시험을 패스하는 건 문제가 아닙니다. Pass4Test의 SAP인증 C\_TS414\_2023 덤프는 시험 적응을 최고의 인지도를 넓히 알고 있습니다. 저희가 제공한 시험에 상문제로 시험에 도전해보지 않으실래요? SAP인증 C\_TS414\_2023 덤프를 선택하시면 성공의 지름길이 눈앞에 다가옵니다.

## 최신 SAP Certified Associate C\_TS414\_2023 무료 샘플 문제 (Q60-Q65):

질문 # 60

Which customizing settings are mandatory for defects recording with inspection lots? Note: There are 2 correct answers to this question.

- A. Assign a notification type to an inspection type
- B. Activate reference to existing notifications
- C. Define the report type
- D. Activate the workflow template

정답: A,C

설명:

Defects recording for inspection lots (e.g., transaction QE51N) requires specific Customizing:

\* Assign a Notification Type to an Inspection Type (A): In Customizing (SPRO > QM > Quality Inspection > Inspection Lot Creation > Maintain Inspection Types), linking a notification type (e.g., Q3) to an inspection type (e.g., 01) enables automatic or manual notification creation for defects, a mandatory step for integration.

\* Define the Report Type (D): The report type (SPRO > QM > Quality Inspection > Defects Recording > Define Report Types) must be defined to determine the defect recording layout and process, a required setting.

\* Activate the Workflow Template (B): Workflow is optional for notifications, not mandatory for defect recording.

\* Activate Reference to Existing Notifications (C): This is an optional enhancement, not a requirement.

Thus, "Assign a notification type to an inspection type" and "Define the report type" are the correct answers.

References: SAP Help Portal - "Defects Recording Customizing"; SAP S/4HANA QM Customizing Guide - "Inspection Types".

질문 # 61

Your customer uses MIC and requests automatic defect recording

After configuration defect recording the implementation Guide, which additional steps must you perform to satisfy customer requirements?

(2 correct ans)

- A. Assign a notification type to an inspection type
- B. Activate defects recording in the characteristic control indicator for your MIC
- C. Assign an inspection method to your MIC
- D. Select the radio button to activate quality notification in the defect class

정답: A,B

질문 # 62

Which of the following must be assigned when you create an operation in an inspection plan?

- A. Control key
- B. Standard text key
- C. Work center
- D. Activity type

정답: A

설명:

When creating an operation in an inspection plan (transaction QP01/QP02), certain fields are mandatory to define the operation's purpose and execution in SAP S/4HANA QM:

\* Control Key (B): The control key is a mandatory field in the inspection plan operation. It determines the operation's behavior, such as whether inspection characteristics are required, whether it's a milestone, or if it triggers specific actions (e.g., QM01 for quality inspection). Defined in Customizing (SPRO > Quality Management > Quality Planning > Inspection Planning > Define Control Keys), it ensures the system knows how to process the operation. Without it, the operation cannot be saved.

\* Activity Type (A): This is relevant for cost accounting (e.g., in Production Planning or QM orders) but is not mandatory in the inspection plan operation itself.

\* Work Center (C): The work center (e.g., a test station) is optional in QM inspection plans unless specified by the control key. It's common but not universally required.

\* Standard Text Key (D): This provides predefined descriptions for operations but is optional and not required to create an operation.

Thus, "Control key" is the correct answer, as it's the only mandatory assignment in standard SAP QM for inspection plan operations. References: SAP Help Portal - "Inspection Planning with Task Lists"; SAP S/4HANA QM User Guide - "Operations in Inspection Plans".

### 질문 # 63

A quality info record is released for the purchase of a material from a supplier. In what ways can you restrict the release? Note: There are 2 correct answers to this question.

- A. To a period of time, by supplying a release date
- B. Until the supplier has provided a quality certificate, by entering a certificate type
- C. Until the supplier quality score is better than a threshold, by entering the minimum threshold
- D. To a quantity, by entering a release quantity

정답: B,D

### 설명:

The quality info record: Procurement (transaction QI01/QI02) manages supplier-material relationships and can impose release restrictions:

\* To a Quantity, by Entering a Release Quantity (A): In the quality info record, you can set a "Release Quantity" field to limit the approved purchase quantity (e.g., 100 units). Once exceeded, further approval is needed, a standard feature.

\* Until the Supplier Has Provided a Quality Certificate, by Entering a Certificate Type (B): You can specify a certificate type (e.g., "ISO 9001") in the "Certificate" field, blocking release until the supplier provides it, verified during goods receipt.

\* To a Period of Time, by Supplying a Release Date (C): While validity dates exist, they define the record's lifespan, not a specific release restriction mechanism.

\* Until the Supplier Quality Score is Better Than a Threshold (D): Quality scores influence supplier evaluation but aren't directly set as a release condition in the info record.

Thus, "A" and "B" are the correct answers, reflecting standard SAP QM functionality. References: SAP Help Portal - "Quality Info Record: Procurement"; SAP S/4HANA QM User Guide - "Supplier Release".

### 질문 # 64

After you create customer master records, you define second inspection related default specification in the .... Which of the followings options can you use to control when the quality inspection take place (2 correct ans)

- A. The inspection occurs after the good issue in posted
- B. The inspection occurs after the transport order is quit.
- C. The inspection occurs after the release of the sales order
- D. The inspection occurs before the good issue in posted

정답: A,D

### 질문 # 65
