

Pass Guaranteed Huawei - Perfect H35-211_V2.5 - Reliable HCIP-Access V2.5 Dumps

Experts at ExamDiscuss have also prepared Huawei H35-211_V2.5 practice exam software for your self-assessment. This is especially handy for preparation and revision. You will be provided with an examination environment and you will be presented with actual exam Huawei H35-211_V2.5 Exam Questions. This sort of preparation method enhances your knowledge which is crucial to excelling in the actual Huawei H35-211_V2.5 certification exam.

Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam is a valuable certification for IT professionals who work with Huawei access network products. HCIP-Access V2.5 certification demonstrates that the holder has the knowledge and skills required to design, deploy, operate, and maintain access networks using Huawei products and technologies. With this certification, IT professionals can enhance their career prospects and gain recognition for their expertise in the access network field. Additionally, the certification is recognized globally, making it a valuable asset for professionals who work with Huawei products and technologies around the world.

Huawei H35-211_V2.5 Exam covers a wide range of topics related to access network technologies, including access network architecture, network protocols, network security, network management, and network optimization. To pass the exam, candidates must have a deep understanding of access network technologies and must be able to apply this knowledge to real-world scenarios. HCIP-Access V2.5 certification is highly valued by employers and is a key credential for IT professionals who wish to advance their careers in the field of access network technologies.

Reliable H35-211_V2.5 Dumps Exam Instant Download | Updated Latest H35-211_V2.5 Exam Test

Pass the HCIP-Access V2.5 H35-211_V2.5 certification exam which is a challenging task. To make H35-211_V2.5 exam success journey simple, quick, and smart, you have to prepare well and show a firm commitment to passing this exam. The real, updated, and error-free HCIP-Access V2.5 H35-211_V2.5 Exam Dumps are available over the ExamDiscuss.

Huawei HCIP-Access V2.5 Sample Questions (Q47-Q52):

NEW QUESTION # 47

When the Type C dual-home protection linkage uplink detection is enabled, if the OLT or the OLT uplink fails, the Type C dual-home protection can switch over to another OLT.

- A. False
- **B. True**

Answer: B

Explanation:

Type C GPON protection uses two different OLTs (dual-home). With uplink status linkage configured, a failure of the active OLT itself or its uplink interface triggers a protection switchover to the standby OLT to maintain service continuity for ONUs homed through the protected ODN.

References: HCIP-Access V2.5 Study Guide (Type C Dual-Home Protection and Uplink Linkage); Huawei OLT Protection Feature Description (Type C Protection Behavior and Switchover Conditions).

NEW QUESTION # 48

(Single-choice) An IPTV user reflects that the TV cannot be watched, open the debug switch on the OLT side, and the debug printing information is as follows: huawei(config).

This can be judged by the results of the query

- A. IGMP Sakamoto Fussel
- **B. User bandwidth validation failed**
- C. The poN port multicast bandwidth is insufficient
- D. The user does not have permission to watch the show

Answer: B

NEW QUESTION # 49

If the ONT zero-touch provisioning function is enabled on eSight, you can configure multiple service profiles.

Which parameters can be set on the Multi-Service Profile Management tab page?

- A. Number of Ethernet ports
- **B. Voice VLAN**
- C. Default VLAN
- D. ONU type
- **E. VLAN**

Answer: B,E

Explanation:

In eSight's ONT Zero-Touch workflow, multi-service profiles define service parameters delivered to ONTs- primarily service VLANs such as Internet/Data VLAN, Voice VLAN, and IPTV/Multicast VLAN with related QoS. Hardware attributes like ONU type or Ethernet port count are part of the device/ONT profile, not the multi-service profile. A generic "Default VLAN" parameter is not used here; instead, explicit service VLANs are specified (for example, data VLAN and voice VLAN).

References: HCIP-Access V2.5 Study Guide - Network Management & Maintenance: eSight ONT Zero- Touch (multi-service profile content: data/voice/multicast VLAN parameters, QoS templates).

NEW QUESTION # 50

(Multi-select) You queried PPPoE simulation results on the MDU side as shown below. From the query results, it can be judged that:

(Note: the actual simulation output is not included in the prompt.)

- A. The service configuration of PPPoE users is normal
- B. A, B, C On Huawei devices, PPPoE diagnostic/simulation tools verify the end-to-end PPPoE procedure (Discovery and Session), and when credentials are supplied authentication (PAP/CHAP) as well: Successful PADI/PADO/PADR/PADS exchange confirms Layer-2 reachability to the BRAS (option C). A successful session establishment and authentication indicate that the service configuration for PPPoE users is correct and the username/password & auth method are valid (options A and B). The MDU management IP (option D) is unrelated to the PPPoE access simulation itself; PPPoE runs over the subscriber VLAN/port/uplink toward BRAS, not via the MDU's management plane, so simulation success does not prove the management IP configuration. These behaviors align with Huawei's PPPoE diagnostic/monitoring command descriptions that detail session status, discovery phases, and authentication verification for fault location
- C. The PPPoE user account and authentication method are correct
- D. The link between the MDU uplink and the BRAS is OK
- E. The MDU management IP is configured correctly

Answer: A,B,C,D,E

NEW QUESTION # 51

Under the H.248 protocol, if the signaling IP and media IP are both 10. 1 1 100/8, voice gateway is 10. 1 1 1. When configuring voIP service, the following command is incorrect

- A. Use the `if-h248 attribute` command to configure interface properties under the voice interface
- B. Using the command `ip address media 10. 1 1 100 10. 1 1 1` Configure the media IP
- C. Use the `reset coldstart` command under Voice Interface to make the interface property configuration take effect
- D. Using the command `ip address signaling 10. 1 1 100 10. 1 1 1` Configure the signaling IP

Answer: D

NEW QUESTION # 52

.....

The H35-211_V2.5 PDF works on smart phones, tablets, and laptops. Windows computers support the H35-211_V2.5 desktop practice test software. No software installation is necessary for the web-based Huawei Exam practice exam. All operating systems (Mac, Linux, Android, iOS, Windows) and major browsers support the H35-211_V2.5 web-based practice exam.
