Test C-CPI-2506 Dumps Demo - C-CPI-2506 Pdf Version

As long as you are willing to exercise on a regular basis, the C-CPI-2506 exam will be a piece of cake, because what our C-CPI-2506 practice materials include is quintessential points about the exam. And our high pass rate as 98% to 100% are all proved data form our customers who had attended the C-CPI-2506 Exam and got their success with the help of our C-CPI-2506 study dumps. So just come on and join our success!

SAP C-CPI-2506 Exam Syllabus Topics:

Topic	Details

Topic 1	• SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 2	• Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 3	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

SAP Certified Associate - Integration Developer Sample Questions (Q48-Q53):

NEW QUESTION # 48

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Integration processes can be developed offline.
- B. Customer-to-Customer(C2C) integrations can be developed
- C. Predefined scenarios can be used out-of-the-box.
- D. A local installation is not required.

Answer: C,D

Explanation:

Some advantages of the cloud integration capability within SAP Integration Suite are:

A local installation is not required. The cloud integration capability is a cloud-based service that runs on SAP Business Technology Platform (BTP). It does not require any installation or maintenance on your local system. You can access it from any web browser and start developing and deploying integration flows using a graphical user interface or an Eclipse-based tooling.

Predefined scenarios can be used out-of-the-box. The cloud integration capability provides a rich set of predefined integration scenarios that cover various use cases and domains, such as SAP-to-SAP integration, SAP-to-non-SAP integration, hybrid integration, process orchestration, and so on. You can browse and discover these scenarios from the Discover page of the cloud integration web UI or from the SAP API Business Hub. You can use these scenarios as they are or customize them according to your needs. Reference: Cloud Integration Capability Overview | SAP Help Portal, Discover Integration Content | SAP Help Portal

NEW QUESTION # 49

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. ApplicationAdmin and ApplicationDevelop
- B. IntegrationAdmin and IntegrationDevelop
- C. SecurityAdmin and SecurityDevelop
- D. EventMeshAdmin and EventMeshDevelop

Answer: D

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and spool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh.

Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

NEW QUESTION # 50

You want to implement a synchronous call to a remote HTTP API as an integration flow component. Which adapter can you use?

- A. Mail
- B. SFTP
- C. OData
- D. AMQP

Answer: C

Explanation:

For a synchronous call to a remote HTTP API in an integration flow:

The OData adapter (or HTTP adapter) is used to perform synchronous request-reply communication with REST-based services.

AMQP # Messaging protocol, not synchronous.

SFTP # File-based transfer, asynchronous.

Mail # For SMTP/IMAP, not synchronous API calls.

Thus, the correct adapter for a synchronous remote API call is OData (or HTTP adapter, depending on configuration).

NEW QUESTION # 51

What can you use to prevent overload in an OData request and reply call?

- A. Stop parameter
- B. HTTP adapter
- C. Query filter
- D. Paging

Answer: D

Explanation:

To prevent overload in an OData request and reply call, you can use paging. Paging is a technique that allows you to retrieve a large number of data sets in smaller chunks or pages. You can use the OData query options \$top and \$skip to specify how many records you want to fetch and how many records you want to skip in each request. This reduces the network load and improves the performance of the OData service. Reference: OData API | SAP Help Portal, SAP Integration Suite: enrich a payload with OData Service | SAP Blogs

NEW QUESTION # 52

Which of the following can you use for an XSLT mapping in an integration flow?

- A. JSON
- B. PHP
- C. XML
- D. HTML

Answer: C

Explanation:

To use an XSLT mapping in an integration flow, you must use XML as the input and output format. XSLT stands for Extensible Stylesheet Language Transformations, which is a language for transforming XML documents into other XML documents or other formats. An XSLT mapping consists of an XSLT stylesheet that defines the rules for transforming the source XML document into the target XML document. You can use an XSLT mapping step in an integration flow to apply an XSLT transformation to the message body. Reference: [XSLT Mapping](#) | SAP Help Portal, [XSLT - W3Schools](#)

NEW QUESTION # 53

• • • • •

If you failed to do so then the customer gets a full refund from PrepPDF according to the terms and conditions. Users can start using SAP C-CPI-2506 instantly after purchasing it. Three C-CPI-2506 Exam Questions format is provided to customers so that they can access the SAP Certified Associate - Integration Developer (C-CPI-2506) prep material in every possible way according to their needs.
