VMware NSX 4.x Advanced Design 認定 3V0-42.23 試験問題 (Q21-Q26):

質問 # 21

Assessing Layer 3 switch fabric design implications is important for understanding?

- **A. How routing between VLANs will be managed**
- B. The color scheme of the switch LEDs
- C. The impact on physical space requirements
- D. The desktop wallpaper choices for administrators

正解: A

質問 # 22

Which of the following is a requirement for using NSX Federation for disaster recovery?

- A. All sites must have the same IP address space.
- B. All sites must have the same physical hardware.
- C. All sites must be located in the same geographical region.
- **D. All sites must have the same NSX version and build.**

正解: D

解説:

* NSX Federation Requirements (Correct Answer - A):

* NSX Federation allows managing multiple NSX-T Data Center instances centrally across multiple locations.

* To ensure seamless disaster recovery, all sites must run the same NSX version and build to support:

* Global Policies & Rules Consistency

* Inter-Site Transport Zone Communication

* Seamless Failover & Policy Replication

* Incorrect Options:

* (B - Same Physical Hardware Required):

* NSX Federation does not require identical hardware. However, each site should meet the minimum hardware specifications for compatibility.

* (C - Must Be in the Same Region):

* Federation supports multi-region deployments, allowing disaster recovery across different geographical locations.

* (D - Must Have the Same IP Address Space):

* Each NSX site can have different IP address spaces, as NSX Federation supports routing between sites using Tier-0 Gateways and BGP.

質問 # 23

NSX Manager sizing options should be considered based on?

- **A. Number of VMs managed**
- B. Number of physical servers
- **C. Scale of the operational environment**
- D. Color scheme of the user interface

正解: A、C

質問 # 24

Stretched security use cases in Federation are primarily designed to?

- A. Eliminate the need for a security policy
- **B. Maintain consistent security postures across multiple locations**
- C. Focus solely on physical security enhancements
- D. Reduce the overall number of firewalls deployed

正解: B

質問 # 25

Which of the following would be an example of a customer requirement that a solutions architect must consider in the design of an NSX solution?

- A. A customer has a limited budget for the NSX implementation.
- B. A customer has limited resources available for the implementation, such as personnel or hardware.
- **C. A customer wants to implement segmentation to improve network security.**
- D. A customer assumes that NSX will be able to integrate with their existing infrastructure.

正解: C

解説:

1. Understanding Customer Requirements vs. Constraints

* Customer requirements are business or technical needs that must be met within the NSX solution design.

* Constraints are limitations (e.g., budget, hardware, personnel) that must be worked around but do not define the primary objective.

2. Why "Implementing Segmentation for Security" is the Correct Answer (A)

* Segmentation improves security posture and compliance (e.g., PCI-DSS, GDPR, HIPAA).

* Micro-segmentation with NSX Distributed Firewall (DFW) prevents lateral movement of threats.

* It is a functional requirement, meaning the NSX solution must be designed to meet this security goal.

3. Why Other Options are Incorrect

* (B - Budget Limitation):

* Budget is a constraint, not a functional requirement.

* (C - Assumption of NSX Integration):

* Assumptions are not requirements; proper validation is needed.

* (D - Limited Personnel or Hardware):

* This is a deployment constraint, not a requirement.

4. NSX Design Considerations for Network Segmentation

* Use NSX Distributed Firewall for micro-segmentation.

* Define security groups based on workloads, users, or application tiers.

* Ensure policies are aligned with compliance frameworks.
