New SPLK-1002 Real Test | Test SPLK-1002 Voucher

In order to pass Splunk Certification SPLK-1002 Exam disposably, you must have a good preparation and a complete knowledge structure. Test4Cram can provide you the resources to meet your need.

Splunk SPLK-1002 exam is the certification exam for the Splunk Core Certified Power User. SPLK-1002 exam tests the candidate's ability to use Splunk to perform tasks such as creating advanced reports, dashboards, and alerts, configuring field aliases and calculated fields, and creating and managing lookups. SPLK-1002 Exam also covers topics such as data models, pivot, and charting, and Splunk Enterprise Security.

Splunk Core Certified Power User Exam Sample Questions (Q210-Q215):

NEW QUESTION # 210

Which of the following statements about event types is true? (select all that apply)

- A. Event types categorize events based on a search.
- B. Event types can be tagged.
- C. Event types must include a time range.
- D. Event types can be a useful method for capturing and sharing knowledge.

Answer: A,C

NEW QUESTION # 211

Which of these search strings is NOT valid:

- A. index=web status=50* | chart count by host, status
- B. index=web status=50* | chart count over host by status
- C. index=web status=50* | chart count over host, status

Answer: C

Explanation:

This search string is not valid: index=web status=50* | chart count over host,status2. This search string uses an invalid syntax for the chart command. The chart command requires one field after the over clause and optionally one field after the by clause. However, this search string has two fields after the over clause separated by a comma. This will cause a syntax error and prevent the search from running. Therefore, option A is correct, while options B and C are incorrect because they are valid search strings that use the chart command correctly.

NEW QUESTION # 212

Which of the following are valid options to speed up reports? (Select all the apply.)

- A. Edit permissions
- B. Edit schedule
- C. Edit description
- D. Edit acceleration

Answer: D

Explanation:

Explanation

One of the valid options to speed up reports is to edit acceleration, which means that you can enable summary indexing or data model acceleration for your reports to improve their performance². Summary indexing allows you to create reports that run over large amounts of data by storing the results of scheduled searches in a summary index and using that index for faster reporting². Data model acceleration allows you to create reports that use data models by creating and storing summaries of the data model datasets and using them for faster reporting². Therefore, option C is correct, while options A, B and D are incorrect because they are not options to speed up reports.

NEW QUESTION # 213

How does a user display a chart in stack mode?

- A. You cannot display a chart in stack mode, only a timechart.
- B. By turning on the Use Trellis Layout option.
- C. By using the stack command.
- D. By changing Stack Mode in the Format menu.

Answer: D

Explanation:

A chart is a graphical representation of your search results that shows the relationship between two or more fields². You can display a chart in stack mode by changing the Stack Mode option in the Format menu². Stack

mode allows you to stack multiple series on top of each other in a chart to show the cumulative values of each series. Therefore, option C is correct, while options A, B and D are incorrect because they are not ways to display a chart in stack mode.

NEW QUESTION # 214

Which of the following searches would create a graph similar to the one below?

`index=_internal sourcetype=SavedSplunker | fields sourcetype, status |`

- A. `transaction status maxspan=1d | chart count OVER status by _time index=_internal sourcetype=SavedSplunker | fields sourcetype, status |`
- **B. None of these searches would generate a similar graph.**
- C. `transaction status maxspan=1d | timechart count by status`
- D. `transaction status maxspan=1d | stats count by status index=_internal sourcetype=SavedSplunker | fields sourcetype, status |`

Answer: B

Explanation:

None of these functions related to the graph in exhibit. All of these functions have `maxspan=1d` which is not a valid argument.

NEW QUESTION # 215
