

# 100% Pass Quiz High Hit-Rate VMware - 2V0-15.25 - New VMware Cloud Foundation 9.0 Support Exam Price

As you see, all of the three versions are helpful for you to get the 2V0-15.25 certification: the PDF, Software and APP online. So there is another choice for you to purchase the comprehensive version which contains all the three formats, it is the Value Pack. Besides, the price for the Value Pack is quite favorable. And no matter which format of 2V0-15.25 study engine you choose, we will give you 24/7 online service and one year's free updates on the 2V0-15.25 practice questions.

Although the 2V0-15.25 exam prep is of great importance, you do not need to be over concerned about it. With scientific review and arrangement from professional experts as your backup, and the most accurate and high quality content of our 2V0-15.25 Study Materials, you will cope with it like a piece of cake. So our 2V0-15.25 learning questions will be your indispensable practice materials during your way to success.

## Test 2V0-15.25 Sample Online & Reliable 2V0-15.25 Test Braindumps

We assure that you can not only purchase high-quality 2V0-15.25 prep guide but also gain great courage & trust from us. A lot of online education platform resources need to be provided by the user registration to use after purchase, but it is simple on our website. We provide free demo of 2V0-15.25 Guide Torrent, you can download any time without registering. Fast delivery—after payment you can receive our 2V0-15.25 exam torrent no more than 10 minutes, so that you can learn fast and efficiently. What are you waiting for? Just come and buy our 2V0-15.25 exam questions!

## VMware Cloud Foundation 9.0 Support Sample Questions (Q31-Q36):

### NEW QUESTION # 31

A VMware Cloud Foundation (VCF) administrator cannot deploy Virtual Machines (VMs) to a compute cluster. The administrator discovers that the vCLS VMs on the problematic cluster are powered off and cannot be powered on. What action can the administrator take to enable deployment of VMs?

- A. Disable HA on the affected cluster.
- **B. Enable retreat mode on the affected cluster.**
- C. Set DRS Automation level to fully automated.
- D. Delete all resource pools in the affected cluster.

**Answer: B**

Explanation:

In vSphere 7+ and VCF-managed clusters, the vSphere Cluster Services (vCLS) VMs must remain powered on for DRS, cluster health, and policy enforcement to function. If the vCLS VMs cannot power on, no workloads—including new VMs—can be deployed to the cluster because vSphere considers the cluster unhealthy.

A common cause is insufficient resources (CPU/memory), datastore issues, or policy conflicts preventing vCLS VMs from starting. VMware provides Retreat Mode as a troubleshooting mechanism to temporarily disable vCLS, allowing the administrator to deploy VMs and correct underlying issues. Enabling retreat mode:

- \* Removes vCLS from the cluster
- \* Restores ability to deploy VMs
- \* Allows remediation of storage/placement issues
- \* Can later be disabled to restore DRS health

Option A (deleting resource pools) does not restore vCLS VM power state.

Option B (disabling HA) does not affect vCLS behavior.

Option D (setting DRS automation level) does not correct vCLS placement problems.

### NEW QUESTION # 32

An administrator discovers that a VMware Cloud Foundation (VCF) workload domain four-node vSAN cluster is experiencing a network partition. The workload domain vCenter displays a "vSAN cluster partition" warning. The performance across the cluster is degraded and the objects are showing as non-compliant.

What could be causing the network partition?

- A. Jumbo frames are configured on the vSphere distributed switch (VDS).
- **B. The VLAN was changed on the physical switch port.**
- C. IGMP snooping is disabled on the multicast group.
- D. The vSAN Witness service was added to the vMotion network.

**Answer: B**

Explanation:

A vSAN cluster network partition occurs when vSAN nodes cannot communicate over the designated vSAN network. In VMware Cloud Foundation workload domains, the vSAN network relies on L2 adjacency, consistent VLAN configuration, and stable multicast/BUM behavior (in older versions). VCF 9.0 uses unicast-mode vSAN, so multicast-related issues (such as IGMP snooping configuration) are no longer relevant.

A network partition can occur when the VLAN ID on the physical switch port differs from the VLAN configured on the vSphere Distributed Switch (VDS) for the vSAN VMkernel adapters. The documentation emphasizes that consistent VLAN configuration across the physical and virtual network is required for proper vSAN cluster communication. If a switch port is reconfigured—intentionally or accidentally—to use a different VLAN, the node becomes isolated from the rest of the vSAN cluster, causing:

- \* "vSAN cluster partition" warnings in vCenter
- \* degraded performance
- \* objects marked as non-compliant
- \* resyncs that cannot complete

Option A (IGMP snooping) does not apply because modern vSAN uses unicast, not multicast.

Option C (Jumbo frames) would cause packet loss only if inconsistently configured, but it does not cause a full network partition.

Option D (vSAN Witness on vMotion) is relevant only for stretched clusters and does not cause a partition in a standard four-node cluster.

### NEW QUESTION # 33

An administrator has observed that the vSphere Global Inventory is only available from the management domain vCenter. The Global Inventory is not available from the workload domain's vCenter. Why is the "Global Inventory" missing from the workload domain's vCenter?

- A. An inventory sync was not run following the workload domain creation.
- **B. VCF SSO and vCenter Linking have not been configured.**
- C. Supervisor Management has not been enabled.
- D. An external VIDB instance has not been configured.

**Answer: B**

Explanation:

The Global Inventory List (GIL) is only available when multi-vCenter SSO domain linking is configured. In VMware Cloud Foundation, the management domain vCenter is deployed first and becomes the root vCenter for global inventory data. For workload domains, their vCenter Servers must be registered into the same SSO domain and linked with the management-domain vCenter in order for the global inventory data (VMs, hosts, clusters, content libraries) to appear.

If a workload domain vCenter is not SSO-linked, it operates in its own identity domain, and therefore cannot access or present Global Inventory, resulting in exactly the symptom described: the management domain vCenter shows the GIL, while the workload domain vCenter does not.

Option B (Supervisor Management) relates to vSphere with Tanzu and has no impact on Global Inventory.

Option C (inventory sync) is incorrect—there is no manual sync required; GIL relies entirely on SSO linking.

Option D (VIDB) is not related to vCenter linking or inventory visibility; it is used by VCF Identity Broker.

Therefore, the reason the Global Inventory is missing from the workload domain vCenter is that SSO/vCenter Linking has not been configured, which is required for federation across all VCF vCenters.

### NEW QUESTION # 34

An administrator is troubleshooting an issue relating to VMware Cloud Foundation (VCF) Automation. While troubleshooting, the administrator realizes that debug-level information is not displayed in the VCF Automation Task Log.

How would the Administrator enable debug-level information in the Task Log?

- A. Enable "display debug information" in the Administration > General Settings section of the Provider Management portal.
- B. Enable "display debug information" in the Administration > Events and Tasks section of the Provider Management portal.
- C. Enable "display debug information" in the Administer > Settings section of the Organization Management portal.
- **D. Enable "display debug information" in the Administration > Feature Flag section of the Provider Management portal.**

**Answer: D**

Explanation:

In VMware Cloud Foundation (VCF) 9.0 Automation, the visibility of debug-level information in Task Logs is controlled centrally by the Provider Administrator through the Provider Management portal. Debug logging is not enabled by default because it exposes verbose operational details intended primarily for troubleshooting. According to the VCF Automation architecture and operations model, advanced logging capabilities—including debug output—are gated behind feature flags.

To enable debug-level information, the Provider Admin must navigate to:

Provider Management # Administration # Feature Flags # Display Debug Information Once this flag is enabled, the system begins emitting additional diagnostic detail into Task Logs, improving insight into failures, orchestration flows, API calls, and service-to-service interactions. This aligns with VCF's multi-tenant design, where only the Provider tier has permission to modify global settings that affect all Organizations.

Options A, C, and D are incorrect because Organization-level settings do not control system-wide logging, and the Events/Tasks or General Settings sections do not contain the mechanism for enabling debug output.

Only the Feature Flag section controls this capability.

### NEW QUESTION # 35

A VMware NSX Edge node is present in the inventory but shows "Not Ready" status in NSX Manager UI.

What should the administrator check first?

- A. The NSX Edge node's CPU reservation

- B. The NSX Edge has been added to an Edge cluster
- **C. The NSX Edge node's uplink network configuration**
- D. The license key in NSX Manager UI

**Answer: C**

Explanation:

The status "Node Not Ready" in the NSX Manager UI (specifically in the Configuration State column of the Edge Transport Nodes view) indicates that the NSX Manager has failed to push or validate the necessary configuration to the Edge VM.

\* Check Uplink Network Configuration (Option C): This is the most common cause for a "Node Not Ready" state during deployment or operation. For an Edge Node to be "Ready" (Success/Up), it must have a valid Transport Node configuration, which includes the Uplink Profile, IP Pool (for TEPs), and mapping to the Fastpath Interfaces (N-VDS). If the uplink configuration is missing, incorrect, or the management plane cannot communicate with the edge to apply it, the node remains in a "Not Ready" state.

\* Why not Option A? While an Edge must be in an Edge Cluster to be utilized by a Tier-0 Gateway, a standalone Edge Node should still report a status of "Success" (Configuration) and "Up" (Node Status) if it is healthy. Adding a "Not Ready" (unhealthy/unconfigured) node to a cluster will not fix the underlying configuration issue.

\* Why not Option D? Missing CPU reservations typically lead to a "Degraded" status or service crashes (Data plane down), but "Node Not Ready" is the specific indicator of an incomplete or stalled configuration workflow, usually tied to the transport/uplink setup.

## NEW QUESTION # 36

.....

To stand in the race and get hold of what you deserve in your career, you must check with all the VMware 2V0-15.25 Exam Questions that can help you study for the VMware 2V0-15.25 certification exam and clear it with a brilliant score. You can easily get these VMware 2V0-15.25 Exam Dumps from VMware that are helping candidates achieve their goals.

**Test 2V0-15.25 Sample Online:** <https://www.validexam.com/2V0-15.25-latest-dumps.html>

Our 2V0-15.25 study questions can meet your needs, We hereby guarantee if you fail exam we will refund the 2V0-15.25 guide torrent cost to you soon, Our free demos of our 2V0-15.25 learning questions will help you know our study materials comprehensively, You can contact us to ask for an update in one year anytime, if we update, we will send the VMware 2V0-15.25 exam update to your email for free, Maybe you are still having trouble with the VMware 2V0-15.25 exam; maybe you still don't know how to choose the 2V0-15.25 exam materials; maybe you are still hesitant.

In presenting the real-world challenge of balancing cost with customer 2V0-15.25 service, this case study offers exceptional value to both students and practitioners, A Closer Look at the Fine Print in Privacy Statements.

## Updated VMware 2V0-15.25 Exam Questions [2026] - Quick Tips To Pass

Our 2V0-15.25 study questions can meet your needs, We hereby guarantee if you fail exam we will refund the 2V0-15.25 guide torrent cost to you soon, Our free demos of our 2V0-15.25 learning questions will help you know our study materials comprehensively.

You can contact us to ask for an update in one year anytime, if we update, we will send the VMware 2V0-15.25 exam update to your email for free, Maybe you are still having trouble with the VMware 2V0-15.25 exam; maybe you still don't know how to choose the 2V0-15.25 exam materials; maybe you are still hesitant.
