Google Certified Professional - Cloud Architect (GCP) training pdf vce & Professional-Cloud-Architect online test engine & Google Certified Professional - Cloud Architect (GCP) valid practice demo

A variety of TopExamCollection' Professional-Cloud-Architect dumps are very helpful for the preparation to get assistance in this regard. It is designed exactly according to the exams curriculum. The use of Professional-Cloud-Architect test preparation exam questions helps them to practice thoroughly. Rely on material of the Free Professional-Cloud-Architect Braindumps online sample tests, and resource material available on our website .These free web sources are significant for Professional-Cloud-Architect certification syllabus. Our website provides the sufficient material regarding exam preparation.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q156-Q161):

NEW QUESTION # 156

Your company has successfully migrated to the cloud and wants to analyze their data stream to optimize operations. They do not have any existing code for this analysis, so they are exploring all their options.

These options include a mix of batch and stream processing, as they are running some hourly jobs and live- processing some data as it comes in.

Which technology should they use for this?

- A. Google Container Engine with Bigtable
- B. Google Cloud Dataflow
- C. Google Cloud Dataproc
- D. Google Compute Engine with Google BigQuery

Answer: B

Explanation:
Cloud Dataflow is a fully-managed service for transforming and enriching data in stream (real time) and batch (historical) modes with equal reliability and expressiveness -- no more complex workarounds or compromises needed.

NEW QUESTION # 157

Your marketing department wants to send out a promotional email campaign. The development team wants to minimize direct operation management. They project a wide range of possible customer responses, from 100 to 500,000 click-throughs per day. The link leads to a simple website that explains the promotion and collects user information and preferences. Which infrastructure should you recommend? (CHOOSE TWO)

- A. Use a Google Container Engine cluster to serve the website and store data to persistent disk.
- B. Use a managed instance group to serve the website and Google Cloud Bigtable to store user data.
- C. Use Google App Engine to serve the website and Google Cloud Datastore to store user data.
- D. Use a single compute Engine virtual machine (VM) to host a web server, backed by Google Cloud SQL.

Answer: B,C

Explanation:

NEW QUESTION # 158

Your company is designing its application landscape on Compute Engine. Whenever a zonal outage occurs, the application should be restored in another zone as quickly as possible with the latest application dat a. You need to design the solution to meet this requirement. What should you do?

- A. Configure the Compute Engine instances with an instance template for the application, and use a regional persistent disk for the application data. Whenever a zonal outage occurs, use the instance template to spin up the application in another region. Use the regional persistent disk for the application data,
- B. Create a snapshot schedule for the disk containing the application data. Whenever a zonal outage occurs, use the latest snapshot to restore the disk in another zone within the same region.
- C. Create a snapshot schedule for the disk containing the application data. Whenever a zonal outage occurs, use the latest snapshot to restore the disk in the same zone.
- D. Configure the Compute Engine instances with an instance template for the application, and use a regional persistent disk for the application data. Whenever a zonal outage occurs, use the instance template to spin up the application in another zone in the same region. Use the regional persistent disk for the application data.

Answer: D

Explanation:
Regional persistent disk is a storage option that provides synchronous replication of data between two zones in a region. Regional

persistent disks can be a good building block to use when you implement HA services in Compute Engine.

NEW QUESTION # 159

Your company places a high value on being responsive and meeting customer needs quickly. Their primary business objectives are release speed and agility. You want to reduce the chance of security errors being accidentally introduced.
Which two actions can you take? Choose 2 answers.

- A. Enable code signing and a trusted binary repository integrated with your CI/CD pipeline
- B. Ensure every code check-in is peer reviewed by a security SME
- C. Ensure you have stubs to unit test all interfaces between components
- D. Run a vulnerability security scanner as part of your continuous-integration /continuous-delivery (CI/CD) pipeline
- E. Use source code security analyzers as part of the CI/CD pipeline

Answer: D,E

NEW QUESTION # 160

Your company pushes batches of sensitive transaction data from its application server VMs to Cloud Pub/Sub for processing and storage. What is the Google-recommended way for your application to authenticate to the required Google Cloud services?

- A. Generate an OAuth2 access token for accessing Cloud Pub/Sub, encrypt it, and store it in Cloud Storage for access from each VM.
- B. Ensure that VM service accounts do not have access to Cloud Pub/Sub, and use VM access scopes to grant the appropriate Cloud Pub/Sub IAM roles.
- C. Create a gateway to Cloud Pub/Sub using a Cloud Function, and grant the Cloud Function service account the appropriate Cloud Pub/Sub IAM roles.
- D. Ensure that VM service accounts are granted the appropriate Cloud Pub/Sub IAM roles.

Answer: D

NEW QUESTION # 161

......

As an IT field top company Google certifications are verified as senior products expert standards. Google field reputation and products market share improve certification engine's high gold content.
