Don't miss this opportunity of buying an updated and affordable Salesforce Data-Architect Exam product.

Salesforce Certified Data Architect Sample Questions (Q149-Q154):

NEW QUESTION # 149

Get Cloudy Consulting needs to evaluate the completeness and consistency of contact information in Salesforce. Their sales reps often have incomplete information about their accounts and contacts. Additionally, they are not able to interpret the information in a consistent manner. Get Cloudy Consulting has identified certain ""key"" fields which are important to their sales reps.

What are two actions Get Cloudy Consulting can take to review their data for completeness and consistency? (Choose two.)

- A. Run one report per key field, grouped by that field, to understand its data variability.
- **B. Run a report which shows the last time the key fields were updated.**
- C. Run a process that can fill in default values for blank fields.
- **D. Run a report that shows the percentage of blanks for the important fields.**

Answer: B,D

Explanation:

Running a report that shows the last time the key fields were updated can help Get Cloudy Consulting identify stale or outdated data and prioritize data cleansing activities. Running a report that shows the percentage of blanks for the important fields can help Get Cloudy Consulting measure the completeness of their data and identify gaps or missing value

NEW QUESTION # 150

Universal Containers wants to automatically archive all inactive Account data that is older than 3 years. The information does not need to remain accessible within the application. Which two methods should be recommended to meet this requirement? Choose 2 answers

- **A. Schedule jobs to export and delete using the Data Loader.**
- B. Use the Force.com Workbench to export the data.
- C. Schedule a weekly export file from the Salesforce UI.
- **D. Schedule jobs to export and delete using an ETL tool.**

Answer: A,D

Explanation:

Both C and D are valid methods to automatically archive and delete inactive Account data that is older than 3 years¹. You can use an ETL tool or the Data Loader to schedule jobs to export and delete data based on certain criteria³. Option A is not recommended because the Force.com Workbench is a web-based tool that does not support scheduling or automation. Option B is not suitable because the weekly export file from the Salesforce UI does not delete data from Salesforce.

NEW QUESTION # 151

Due to security requirements, Universal Containers needs to capture specific user actions, such as login, logout, file attachment download, package install, etc. What is the recommended approach for defining a solution for this requirement?

- A. Use a field audit trail to capture field changes.
- **B. Use Event Monitoring to capture these changes.**
- C. Use a third-party AppExchange app to capture changes.
- D. Use a custom object and trigger to capture changes.

Answer: B

Explanation:

Event Monitoring is a feature that allows you to track user actions, such as logins, logouts, downloads, etc., in your Salesforce org. You can use Event Monitoring to monitor performance, usage, security, and compliance

NEW QUESTION # 152

Universal Containers (UC) is planning to move away from legacy CRM to Salesforce. As part of one-time data migration, UC will need to keep the original date when a contact was created in the legacy system. How should an Architect design the data migration solution to meet this requirement?

- A. Write an Apex trigger on the Contact object, before insert event to set the original value in a standard Created Date field.
- B. Create a new field on the Contact object to capture the Created Date. Hide the standard Created Date field using Field - Level Security.
- **C. Enable "Set Audit Fields" and assign the permission to the user loading the data for the duration of the migration.**
- D. After the data is migrated, perform an update on all records to set the original date in a standard Created Date field.

Answer: C

Explanation:

Enabling "Set Audit Fields" allows the user loading the data to set the value of the standard CreatedDate field to match the original date from the legacy system. This is a one-time permission that can be revoked after the migration is completed. The other options would either not work or require additional customization

NEW QUESTION # 153

Universal Containers has a rollup summary field on account to calculate the number of contacts associated with an account. During the account load, Salesforce is throwing an "UNABLE_TO_LOCK_ROW" error.

Which solution should a data architect recommend to resolve the error?

- A. Perform a batch job in parallel mode and reduce the batch size.
- **B. Perform a batch job in serial mode and reduce the batch size.**
- C. Leverage Data Loader's platform API to load data.
- D. Defer rollup summary field calculation during data migration.

Answer: B

NEW QUESTION # 154
