問題 #145

Universal Containers deployed an app in a large change set from a Developer Sandbox to a Developer Pro Sandbox used for testing. After testing, changes had to be made to several of the components in the change set.

How should an app builder move the new changes to the Developer Pro Sandbox?

- A. Update the change set and re_display
- B. Clone the change set and re_display
- C. Refresh the text sandbox and re_display the change set.
- D. Rename the change set, add the changes and re_display

答案： A

解題說明：

* Updating the existing change set with the new changes and redeploying is the most efficient way to move the updated components to the Developer Pro Sandbox. References:

問題 #146

Ursa Major Solar wants to convert the relationship between Galaxy and Star from a lookup relationship to a master-detail relationship so each Galaxy record can be equipped with a roll-up summary count of Star records.

Which two considerations should be made?

Choose 2 answers

- A. The Galaxy object is required to contain existing roll-up summary fields.
- B. The Star records are all required to have an existing value in their Galaxy field.
- C. The Star object has fewer than two existing master-detail relationships.
- D. The Galaxy object has fewer than two existing master-detail relationships.

答案： B,D

解題說明：

The two considerations that should be made are: The Star records are all required to have an existing value in their Galaxy field. This is a prerequisite for converting a lookup relationship to a master-detail relationship. A lookup relationship is an optional relationship that links two objects together, but does not enforce referential integrity or cascade delete. A master-detail relationship is a required relationship that links two objects together and enforces referential integrity and cascade delete. To convert a lookup relationship to a master-detail relationship, all child records must have a value in their lookup field that references an existing parent record. The Galaxy object has fewer than two existing master-detail relationships. This is another prerequisite for converting a lookup relationship to a master-detail relationship. An object can have up to two master-detail relationships with other objects and can act as both the parent and child in different relationships.

To convert a lookup relationship to a master-detail relationship, the parent object must have fewer than two existing master-detail relationships with other objects. The Galaxy object is required to contain existing roll-up summary fields is not a valid consideration, as it is not related to converting a lookup relationship to a master-detail relationship.

問題 #147

A new app builder on the Cloud Kicks team is getting familiar with relationships in the data model.

What functionality would present the app builder a comprehensive view of all relationships In one pi

- A. Lightning Object Creator
- B. Lightning Record Page
- C. Schema Builder
- D. Object Manager

答案： C

問題 #148

The previous administrator of Cloud Kicks' (CK) Salesforce Organization used text as the field type when creating new custom fields. CK's current roadmap requires a project that will clean this up during the Lightning migration.

Which three field types should be considered to keep better track of contact information in fields?

Choose 3 answers

- A. Date
- B. Phone
- C. Email
- D. Number
- E. Time

答案： B,C,D

問題 #149

Which three options are available when activating a Lightning page from the Lightning App Builder?

Choose 3 answers

- A. Make the page the default homepage for specific apps.
- B. Make the page the org default.
- C. Assign the page to a combination of apps and profiles.
- D. Assign the page to a combination of apps and permission sets.
- E. Make the page the default homepage for specific roles.

答案： A,B,C

解題說明：

When activating a Lightning page from the Lightning App Builder, three options are available:

Assign the page to a combination of apps and profiles. This option allows users to specify which apps and profiles will see the custom Lightning page instead of the default page.

Make the page the org default. This option makes the custom Lightning page the default for all users in the org regardless of their app or profile.

Make the page the default homepage for specific apps. This option allows users to set different homepages for different apps in Lightning Experience. [Source]
