A customer in Costa Rica has a FortiGate with SD-WAN configured to use a VPN connection to the United States to browse the internet using a public IP from that country. - A.

Issue an HTTP POST to
`https://192.168.1.99/api/v2/monitor/system/automation-stitch/webhook/Enable%20USA%20Browsing`

```

• C.

Issue an HTTP GET to

```
'https://192.168.1.99/api/v2/monitor/system/automation-

```

• D.

FORTINET

Answer: B,C

Explanation:

Configuration should add the appropriate automation-trigger and automation-stitch settings required for triggering the SD-WAN rule

change.

* The automation-trigger listens for an incoming-webhookevent.

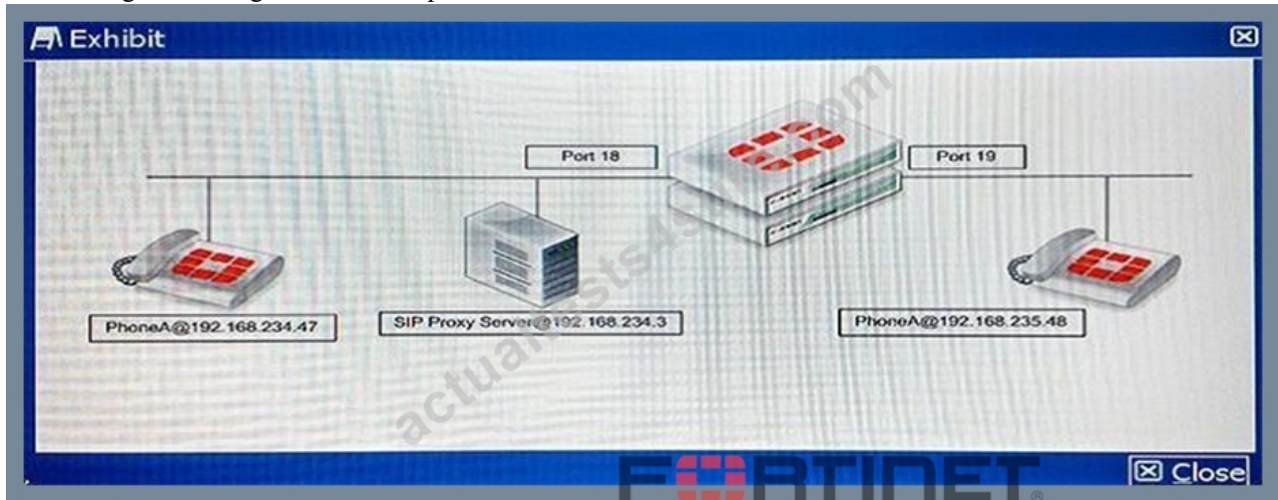

* The automation-stitch ties the trigger to the Enable USA Browsing script, which activates the SD-WAN rule.

The HTTP POST method must be used to trigger the webhook because POST is the correct HTTP request type for sending data or triggering actions. The POST request will invoke the automation-stitch associated with the webhook event and execute the action.
