

Amazon SAA-C03 Valid Test Questions - SAA-C03 New Dumps Free

P.S. Free & New SAA-C03 dumps are available on Google Drive shared by iPassleader: <https://drive.google.com/open?id=1tpNEu2Sftl0VINGPqphv6RSmlau8PShn>

It is acknowledged that there are numerous SAA-C03 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many SAA-C03 study materials by yourself. But since you have clicked into this website for SAA-C03 Practice Guide you need not to worry about that at all because our company is especially here for you to solve this problem. Trust us and you will get what you want!

The AWS Certified Solutions Architect - Associate exam dumps are designed efficiently and pointedly, so that users can check their learning effects in a timely manner after completing a section. Good practice on the success rate of SAA-C03 quiz guide is not fully indicate that you have mastered knowledge is skilled, therefore, the SAA-C03 test material let the user consolidate learning content as many times as possible, although the practice seems very boring, but it can achieve the result of good consolidate knowledge.

SAA-C03 New Dumps Free, SAA-C03 New Braindumps Book

As a prestigious platform offering practice material for all the IT candidates, iPassleader experts try their best to research the best valid and useful Amazon SAA-C03 exam dumps to ensure you 100% pass. The contents of SAA-C03 exam training material cover all the important points in the SAA-C03 Actual Test, which can ensure the high hit rate. You can instantly download the Amazon SAA-C03 practice dumps and concentrate on your study immediately.

Amazon AWS Certified Solutions Architect - Associate Sample Questions (Q595-Q600):

NEW QUESTION # 595

An Amazon EC2 administrator created the following policy associated with an IAM group containing several users. What is the effect of this policy?

- A. Users can terminate an EC2 instance with the IP address 10.100.100.1 in the us-east-1 Region
- B. Users can terminate an EC2 instance in the us-east-1 Region when the user's source IP is 10.100.100.254.
- C. Users can terminate an EC2 instance in any AWS Region except us-east-1.
- D. Users cannot terminate an EC2 instance in the us-east-1 Region when the user's source IP is 10.100.100.254

Answer: B

Explanation:

as the policy prevents anyone from doing any EC2 action on any region except us-east-1 and allows only users with source ip 10.100.100.0/24 to terminate instances. So user with source ip 10.100.100.254 can terminate instances in us-east-1 region.

NEW QUESTION # 596

A company hosts a multi-tier web application that uses an Amazon Aurora MySQL DB cluster for storage. The application tier is hosted on Amazon EC2 instances. The company's IT security guidelines mandate that the database credentials be encrypted and rotated every 14 days. What should a solutions architect do to meet this requirement with the LEAST operational effort?

- A. Create a new AWS Key Management Service (AWS KMS) encryption key. Use AWS Secrets Manager to create a new secret that uses the KMS key with the appropriate credentials. Associate the secret with the Aurora DB cluster. Configure a custom rotation period of 14 days.
- B. Store a file that contains the credentials in an AWS Key Management Service (AWS KMS) encrypted Amazon Elastic File System (Amazon EFS) file system. Mount the EFS file system in all EC2 instances of the application tier. Restrict the access to the file on the file system so that the application can read the file and that only super users can modify the file. Implement an AWS Lambda function that rotates the key in Aurora every 14 days and writes new credentials into the file.
- C. Create two parameters in AWS Systems Manager Parameter Store: one for the user name as a string parameter and one that uses the SecureString type for the password. Select AWS Key Management Service (AWS KMS) encryption for the password parameter, and load these parameters in the application tier. Implement an AWS Lambda function that rotates the password every 14 days.
- D. Store a file that contains the credentials in an AWS Key Management Service (AWS KMS) encrypted Amazon S3 bucket that the application uses to load the credentials. Download the file to the application regularly to ensure that the correct credentials are used. Implement an AWS Lambda function that rotates the Aurora credentials every 14 days and uploads these credentials to the file in the S3 bucket.

Answer: A

Explanation:

<https://aws.amazon.com/blogs/security/how-to-use-aws-secrets-manager-rotate-credentials-amazon-rds-database-types-oracle/>

NEW QUESTION # 597

[Design Resilient Architectures]

A company is making a prototype of the infrastructure for its new website by manually provisioning the necessary infrastructure. This infrastructure includes an Auto Scaling group, an Application Load Balancer, and an Amazon RDS database. After the configuration has been thoroughly validated, the company wants the capability to immediately deploy the infrastructure for development and production use in two Availability Zones in an automated fashion.

What should a solutions architect recommend to meet these requirements?

- A. Use AWS Systems Manager to replicate and provision the prototype infrastructure in two Availability Zones.
- B. Define the infrastructure as a template by using the prototype infrastructure as a guide. Deploy the infrastructure with AWS CloudFormation.
- C. Use AWS Config to record the inventory of resources that are used in the prototype infrastructure. Use AWS Config to deploy the prototype infrastructure into two Availability Zones.
- D. Use AWS Elastic Beanstalk and configure it to use an automated reference to the prototype infrastructure to automatically deploy new environments in two Availability Zones.

Answer: B

Explanation:

AWS CloudFormation is a service that helps you model and set up your AWS resources by using templates that describe all the

resources that you want, such as Auto Scaling groups, load balancers, and databases. You can use AWS CloudFormation to deploy your infrastructure in an automated and consistent way across multiple environments and regions. You can also use AWS CloudFormation to update or delete your infrastructure as a single unit.

NEW QUESTION # 598

A company is migrating a data processing application to AWS. The application processes several short-lived batch jobs that cannot be disrupted. The process generates data after each batch job finishes running. The company accesses the data for 30 days following data generation. After 30 days, the company stores the data for 2 years.

The company wants to optimize costs for the application and data storage. Which solution will meet these requirements?

- A. Use Amazon EC2 On-Demand Instances to run the application. Store the data in Amazon S3 Standard. Move the data to S3 Glacier Deep Archive after 30 days. Configure an S3 Lifecycle configuration to delete the data after 2 years.
- B. Use Amazon EC2 Spot Instances to run the application. Store the data in Amazon S3 Standard. Move the data to S3 Glacier Flexible Retrieval after 30 days. Configure a bucket policy to delete the data after 2 years.
- C. Use Amazon EC2 On-Demand Instances to run the application. Store the data in Amazon S3 Glacier Instant Retrieval. Move the data to S3 Glacier Deep Archive after 30 days. Configure an S3 Lifecycle configuration to delete the data after 2 years.
- D. Use Amazon EC2 Spot Instances to run the application. Store the data in Amazon S3 Standard. Move the data to S3 Glacier Instant Retrieval after 30 days. Configure a bucket policy to delete the data after 2 years.

Answer: A

Explanation:

Amazon EC2 On-Demand Instances: Since the batch jobs cannot be disrupted, On-Demand Instances provide the necessary reliability and availability.

Amazon S3 Standard: Storing data in S3 Standard for the first 30 days ensures quick and frequent access.

S3 Glacier Deep Archive: After 30 days, moving data to S3 Glacier Deep Archive significantly reduces storage costs for data that is rarely accessed.

S3 Lifecycle Configuration: Automating the transition and deletion of objects using lifecycle policies ensures cost optimization and compliance with data retention requirements.

NEW QUESTION # 599

A solutions architect needs to implement a solution that can handle up to 5,000 messages per second. The solution must publish messages as events to multiple consumers. The messages are up to 500 KB in size. The message consumers need to have the ability to use multiple programming languages to consume the messages with minimal latency. The solution must retain published messages for more than 3 months. The solution must enforce strict ordering of the messages.

Which solution will meet these requirements?

- A. Publish messages to Amazon EventBridge. Allow each consumer to create rules to deliver messages to the consumer's own target.
- B. Publish messages to an Amazon Simple Notification Service (Amazon SNS) topic. Ensure that consumers use Amazon Data Firehose to subscribe to the topic.
- C. Publish messages to an Amazon Simple Notification Service (Amazon SNS) topic. Ensure that consumers use an Amazon Simple Queue Service (Amazon SQS) FIFO queue to subscribe to the topic.
- D. Publish messages to an Amazon Kinesis Data Streams data stream. Enable enhanced fan-out. Ensure that consumers ingest the data stream by using dedicated throughput.

Answer: D

Explanation:

- * A. Kinesis Data Streams: Supports high throughput, strict ordering, multiple consumers, and data retention for 365 days.
- * B. SNS + SQS FIFO: Can enforce ordering but lacks native support for 500 KB messages and retention requirements.
- * C. EventBridge: Lacks strict ordering and message size compatibility.
- * D. SNS + Firehose: Not designed for strict ordering or large message sizes.

NEW QUESTION # 600

.....

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test SAA-C03 certification. For the convenience of the users, the SAA-C03 test materials will be updated on the homepage and timely update the information related to the qualification examination. As a result, the SAA-C03 Test Prep can help users to spend the least time, know the test information directly, let users save time and used their time in learning the new hot spot concerning about the knowledge content.

SAA-C03 New Dumps Free: <https://www.ipassleader.com/Amazon/SAA-C03-practice-exam-dumps.html>

For the reason, it would not be unreasonable to claim that iPassleader SAA-C03 New Dumps Free stands to be the prime location for your satisfaction. Started when the user needs to pass the qualification test, choose the SAA-C03 study materials, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials. We have tried our best to simply the difficult questions of our SAA-C03 practice engine to be understood by the customers all over the world.

As a final example of a proxy server benefit, SAA-C03 some proxy servers can perform content filtering. It requires an unnatural act. For the reason, it would not be unreasonable Latest SAA-C03 Test Dumps to claim that iPassleader stands to be the prime location for your satisfaction.

SAA-C03 Exam Dumps - Secret To Pass In First Attempt [2026]

Started when the user needs to pass the qualification test, choose the SAA-C03 Study Materials, they will not have any second or even third backup options, because they will be the first choice of our practice exam materials.

We have tried our best to simply the difficult questions of our SAA-C03 practice engine to be understood by the customers all over the world. Time and Time again I have noticed every individual wants to prepare SAA-C03 exam but they don't have an idea which platform they have to choose for the preparation of SAA-C03 exam.
